

## Index

### a

acoustic cross-talk effect 167  
 acoustic soft supply channel 274, 277,  
 285, 295, 305, 306  
 action ramp 136  
 advancing contact angle 149, 151, 152,  
 336, 366, 367, 370, 378  
 algebraic equations  
   fourth order 402–404  
   second order 399–402  
   third order 399  
 amplification factor 52, 135, 240  
   closed end/closed end waveguide type  
   print head 238–240  
   open end/closed end waveguide type  
   print head 240–242  
 anti-wetting effect 362  
 Antoine's equation 351  
 asymmetric meniscus motion 255  
 asymmetric pulse 5, 53, 136, 143, 188,  
 189, 408  
 attenuation 169

### b

bell-mouth nozzle 79, 94–96, 98  
 bell-mouth shaped cylindrical channel  
 96  
 Bernoulli pressure 34  
 Bernoulli pressure drop 29  
 Bessel functions 27, 33  
 borosilicate glass tube 36  
 Boyle's law 252  
 bubble-jet (thermal) print head 1  
 bulk viscosity 15, 40–41

### c

capillary number 152, 367  
 capillary pressure and force  
   in bell-mouth shaped nozzle  
   161–163  
   in conical nozzle 157–161  
 capillary velocity 31, 315, 316  
 Cassie–Baxter model 361  
 Cauchy stresses 327, 379  
 characteristic equation 101, 102,  
 104–106, 108, 111, 115  
 circular cylindrical nozzle 91, 157, 158  
 closed end/closed end linear array print  
 heads 302–307  
 closed end/closed end waveguide type  
 print heads  
   amplification factor 238, 239  
   fluid velocity enhancement 258–259  
   harmonic driving and Fourier  
   analysis, channel arrangement  
   227–230  
   non-linear analysis 245–246  
 closed end/open end multi-nozzle print  
 head 9  
 co-moving co-ordinate system 29, 30,  
 363  
 compressibility of the fluid 5, 8, 13, 35,  
 37, 75, 80, 81, 83, 172, 173, 195,  
 243, 252, 265, 335  
 conical nozzle 7, 79, 87–92, 96, 97,  
 157–161, 163  
 constructive interference 20, 46, 70,  
 141, 142, 180–183, 219, 223, 338,  
 342

continuity equation 25, 87, 88, 198,  
200, 233, 234, 370  
corrected speed of sound 15, 34–36,  
78, 169, 173, 196, 265, 333  
correction velocity distribution 25, 31  
cylindrical co-ordinate system 23, 327,  
363, 371  
cylindrical jet 33

**d**

damped rigid body motion 105  
damping 4, 5, 7, 9, 15, 17, 18, 20, 21,  
34, 38–42, 52, 56, 57, 61, 70, 77,  
79, 84–87, 91, 101, 102, 104, 105,  
115, 148, 153, 179, 180, 195, 200,  
216, 223, 227, 229, 231, 233, 239,  
245, 247, 282, 338, 339  
damping coefficient 21, 22, 179, 216,  
273  
damping constants 105, 109, 110,  
113–115, 118, 124, 128  
damping ratio 17  
Dimatix Galaxy 256 nozzle print head  
4, 311  
divergence of a vector field 419–420  
droplet deceleration 347  
droplet formation 9  
  exchange of kinetic energy 310  
  high viscosity low surface tension ink  
  330  
  low viscosity high surface tension ink  
  331  
  low viscous ink 311  
  Navier–Stokes equations 312  
  negative pulse 320  
  non-linear two degrees of freedom  
  analysis 332  
  non-linear waveguide theory 335  
  positive pulse 313, 316  
  retracted meniscus 319  
  tail-head droplet 327, 328, 330  
  viscoelastic ink 311  
Droplet-on-demand (DoD) inkjet print  
heads 1  
Duhamel's theorem 381  
dyadic product 420, 421  
dynamic spreading 347

**e**

eigenfunctions 25, 26, 32, 220, 229,  
275, 293, 300  
eigenvalues 25, 27, 29, 32, 269, 280,  
289  
eigenvectors 102–106, 108, 109,  
111–113, 115, 116, 175, 177, 178,  
182, 186, 187, 207, 212, 220,  
269–272, 274, 280–282, 289, 291,  
292, 298–300, 304, 305  
elastic deformation 34, 167  
electroforming 91, 92  
energy consideration, droplet formation  
  negative pulse 324  
  positive pulse 316  
energy dissipation 23  
entrance effect 23–25, 33, 40  
entrance length 23, 28, 29, 31, 33  
entrance pressure correction 29  
equation of motion 5, 7, 15, 18, 19, 24,  
25, 29, 31, 39, 41, 43, 47, 50–52,  
57, 62, 63, 65, 67, 68, 88, 94–98,  
129, 144, 145, 155, 200, 201, 209,  
225, 226, 234–236, 243, 244, 268,  
279, 313, 314, 322, 327, 329, 357,  
369, 372, 376, 378, 380–383, 385,  
386  
equilibrium contact angle 151, 152,  
347, 360–362, 365, 367, 370, 378,  
379, 386–388, 391, 392  
equivalent inertia length 90, 94, 96  
equivalent viscous length 90, 91, 97  
Euler's formula 18  
evaporation  
  dome shaped blobs of fluid 391–393  
  free flying droplet exposed to still air  
  348–353  
  time scale 348  
exponential pulse 5, 6, 15, 47, 48, 50,  
78, 128, 129, 409–413  
exponential pulse driving 409  
  characteristic of 129  
  large viscosity inks 131  
  low viscosity inks 130–131  
  moderate viscosity inks 131–132  
  solutions to 132–134  
  time constants 129

**f**

- first estimate on the frequency
  - dependence of damping 41–42
- first order differential equation of
  - Bernoulli type 40, 86
- flow properties of the ink 14, 76
- flow through a bell-mouth shaped nozzle 91–98
- flow through a conical nozzle 87–91
- force consideration, droplet formation
  - negative pulse 321
  - positive pulse 313
- forced mass-spring-damper system 13
- force equilibrium 83, 151, 360, 366
- Fourier coefficients 136, 137, 188, 189, 409, 412–414
- Fourier decomposition of pulse
  - exponential pulse 409–413
  - with three ramps and two stationary levels 413–415
  - with two ramps 407–409
- fourth order equation 402, 404
- free flying droplet
  - cooling of 353–355
  - deceleration of 355–357
  - evaporation of 348–353
- frequency dependent damping 15, 41, 56–61, 144–148, 233–238, 247, 249

**g**

- gradient of a scalar function 419

**h**

- Hagen–Poiseuille law 16, 23, 206, 221, 338, 391
- harmonically vibrating system with small damping 84
- harmonic driving and Fourier analysis 50–56
- Helmholtz design 2
- Helmholtz frequency 81–84, 87, 102, 115, 135, 137, 148, 227, 231, 313, 326, 337
- Helmholtz mode 80, 81, 83, 85, 103–105, 109–111, 113, 114, 124, 139, 169, 173, 178, 188, 228, 231, 232

- Helmholtz type of print heads 8, 193, 258, 263
- higher order meniscus oscillations 197, 254–257
- high frequency Helmholtz mode 109
- high frequency oscillatory Helmholtz behavior 111
- high viscosity inks
  - exponential ramp actuation 131–132
  - ramp actuation 122–123
  - square pulse driving 115–119
- homogeneous Bessel differential equation 26, 32
- hose pillar 7, 168–172, 175, 178, 185, 187, 188
- hysteresis phenomenon 153

**i**

- idling non-moving system 112, 122
- incompressible and Newtonian fluid 24, 57, 144
- indefinite integrals, hyperbolic functions 422
- inertia controlled spreading 366–389
- inertia equivalent length 91, 97
- inhomogeneous Bessel differential equation 26
- inkjet printers 13, 23, 88, 167, 195, 207, 219, 241, 252, 309
- inkjet print head 1, 23, 91, 244, 265, 307, 336
- isentropic speed of sound 34, 35, 168, 173

**j**

- Jiang, Oh and Slattery formula 152, 366, 377, 379

**k**

- Kelvin functions 58, 59, 145, 146, 236, 237
- kinetic energy 24, 30, 33, 37–40, 64, 65, 81–86, 179, 216, 255–257, 272, 273, 310, 312, 316, 317, 332, 333, 336, 358, 366–368, 371, 372, 375, 377, 378, 384, 389

**I**

Lagrange's method 369, 370, 376, 378  
 landing, droplets  
   non-absorbing substrate 347  
   time scale 348  
 Laplacian of vector field 420–421  
 linear array print head 2, 266–298,  
   302–307  
 linearized equation of motion 25, 31  
 logarithmic decrement method 34,  
   38–40, 67, 84–87, 179, 216, 245,  
   248  
 long waveguide theory 197–207  
 low frequency mode 80, 109, 187  
 low frequency oscillatory slosh mode  
   behaviour 111  
 low frequency slosh mode 84, 109,  
   337  
 low viscosity inks  
   exponential ramp driving 130–131  
   ramp actuation 121–122  
   square pulse driving 105–111

**m**

materials of a print head nozzle 150  
 meniscus displacement 6, 9, 36, 45–47,  
   50, 53–56, 62, 149, 153, 158, 319,  
   334, 337, 339  
 Microdrop 1  
 Microdrop Autopipette AK 510 3, 311  
 MicroFab 1  
 moderate viscosity inks  
   exponential ramp driving 131  
   ramp actuation 122–123  
   square pulse driving 111–115  
 momentary kinetic energy 64, 85  
 motion in the throttle 83, 102, 111,  
   135, 148, 229, 243  
 multi cavity Helmholtz resonator theory  
   activated pump 168  
   governing equations 169–173  
   harmonic driving and Fourier analysis  
   183–191  
   multi-nozzle print head 167  
   ramped pulse driving, low viscosity  
   inks 174–183  
   sample system calculations 167

multi-cavity wave guide theory  
   acoustics 263  
   closed end/closed end linear array  
   print head 302–307  
   open end/closed end linear array  
   print head 266–277  
 multi-nozzle print head 7–9, 14,  
   76, 77, 167, 168, 174, 180–183,  
   193, 194, 263, 264, 266, 267,  
   275, 286, 297, 298, 302, 303,  
   306, 309

**n**

nabla operator 419, 420  
 natural angular frequency 38  
 Navier–Stokes equations 312, 371  
 Newton–Laplace equations 15, 16,  
   78, 82, 147, 170, 199, 234,  
   337  
 Newton–Laplace formula 99, 156  
 Newton's second law of motion 99,  
   226  
 non-linear effects, non-complete filling  
   of the nozzle 61–71  
 non-linear non-homogeneous second  
   order differential equations 63,  
   68  
 non-linear theory 7, 70, 150–156, 224,  
   246, 247, 249–251, 314, 334, 338,  
   339, 341  
 non-linear waveguide theory  
   closed end/closed end arrangement  
   336–340  
 non-Newtonian 309

**o**

Ohnesorge number 358  
 open end/closed end linear array print  
   head  
   activated and non-activated pumps  
   266–277  
   one pump activated and three pumps  
   idling 285–297  
   one pump activated and two pumps  
   idling 277–285  
   shear-mode linear array print head  
   297

- open end/closed end waveguide type  
 print heads  
 amplification factor 240, 241  
 harmonic driving and Fourier analysis  
 230, 232  
 non-linear analysis 246–249  
 oscillatory slosh mode 104, 111
- p**
- parabolic velocity profile 22–24, 28,  
 33, 89, 96, 363, 383, 384  
 penetration depth 41, 353, 354,  
 380–382, 391  
 permeation into porous substrates  
 389–391  
 piezo driven print heads 1–3, 14  
 piezoelectric actuator 2, 4, 7, 13, 15,  
 19, 45, 52, 77, 78, 99, 167, 169,  
 172, 195, 197, 198, 243, 270, 280,  
 298, 309, 310, 333  
 Poiseuille damping case 60, 148  
 Poiseuille pressure drop 29  
 pressure in the pump chamber 13, 15,  
 45, 46, 57, 75, 78, 110, 111, 115,  
 118, 123, 126–128, 133, 137, 139,  
 142, 144, 147, 157, 169, 190, 191,  
 197, 219, 223, 230  
 pressure vessel formula 35, 198, 234  
 propulsion force 62, 155  
 pulse with three ramps and two  
 stationary levels 413–415  
 pulse with two ramps 407–409
- q**
- quadratic algebraic equation 94, 315,  
 323, 401
- r**
- radian frequency 82, 289  
 radius of the nozzle 6, 24, 37, 62, 75,  
 79, 87, 149, 152, 155, 162, 257,  
 313, 316, 317, 321, 325, 326,  
 329  
 ramped pulse 15, 42–47, 49, 53–56,  
 78, 119–128, 174–183, 207–221,  
 227, 229, 231, 247, 248, 276, 284,  
 294, 301, 305, 306  
 ramped pulse driving 42  
 definition of ramp function 119  
 large viscosity inks 122–123  
 low viscosity inks 121  
 moderate viscosity inks 122  
 positive pulse 120  
 volume change of the initial ramp  
 120  
 ramp functions 44, 119, 120, 174,  
 207, 208, 217, 270, 271, 280, 290,  
 298  
 Rayleigh dissipation function 372  
 Rayleigh–Plateau instability 372, 373,  
 376  
 Rayleigh–Plateau–Weber instability  
 330  
 Rayleigh–Plesset equation 254  
 Rayleigh’s method 79–84  
 for calculating the resonance  
 frequency 37–38  
 Rayleigh’s principle 255  
 resonance phenomena 5, 77, 87

  - effect on resonance frequency 36–37
  - symmetric meniscus motion 255
- t**
- third order algebraic equation 150, 399–400
  - throttle 1, 2, 7, 8, 13, 14, 75–78, 80–85, 87, 98, 99, 102, 104–107, 109–113, 115, 117, 118, 122–125, 134, 135, 137, 141–145, 147, 148, 153, 155, 167–169, 171, 172, 175, 178, 184, 185, 189, 193, 195, 196, 198, 200, 204, 211, 224–227, 339, 340
  - time constant 6, 39, 48, 49, 87, 117, 129, 132, 133, 270, 298, 409, 411
  - toroidal co-ordinate system 91, 417
    - definition of 417
    - divergence of a vector field 419–420
    - dyadic product 420
    - gradient of a scalar function 419
    - indefinite integrals, hyperbolic functions 421
    - Laplacian of vector field 420–421
    - nabla operator 419
    - scale factors 417–418
    - unit vector 418–419
  - Trouton's ratio 372
  - two degrees of freedom Helmholtz resonator 7
  - two degrees of freedom system
    - arrangement of a single nozzle print head 77
    - capillary action 77
    - damping 77, 84–87
    - dimensions of throttle 75
    - exponential pulse driving 128–134
    - flow through a bell-mouth shaped nozzle 91–98
    - flow through a conical nozzle 87–91
    - harmonic driving and Fourier analysis 134–148
    - non-linear analysis 148–163
    - ramped pulse driving 119–128
  - Rayleigh's method 79–84
  - schematic of single nozzle print head 76
  - shape of the nozzle 79
  - spring action 77
  - springs 75
  - square pulse driving 98–119
  - suction-pressure 75
  - surface tension 78
  - viscous drag 78
- u**
- uniform velocity profile 31, 33, 378, 382
  - unit vector 418–419
- v**
- variable mass effect 15, 61, 67, 71, 313, 327, 336
  - variable mass formula 61, 154, 312, 313
  - vector differential operator 40
  - velocity vector 40, 62, 89, 94, 96, 155
  - viscoelastic ink 3, 4, 311
  - viscous dissipation 1, 13, 38, 66, 68, 77, 84, 200, 218, 222, 226, 247, 276, 309, 310, 358, 364, 367, 385
  - viscous drag 16, 206
    - and entrance and exit losses 62
  - volume displacement actuator 21, 22, 70, 109
- w**
- Washburn equation 348, 391
  - waveguide theory 9, 193–259
  - waveguide type print heads
    - closed end/closed end design 194
    - fluid velocity enhancement 258–259
    - gas bubble effects 252
    - harmonic driving and Fourier analysis
      - frequency dependent damping 233, 238–240, 242
      - Poiseuille damping 224–226

- waveguide type print heads (*contd.*)
    - non-linear analysis
      - air bubble effects 252–254
      - fluid displacement and velocity 250, 251
      - higher order meniscus oscillations 254–257
      - high frequency pulsing 249
      - modeling 243, 245
      - nozzle front flooding 249–251
      - start-up phenomenon 249
    - open end/closed end design 194
    - ramped pulse driving, resonance frequencies and eigenmodes 207–209
    - vapour bubble effects 252
  - wave guide type pump 8
  - wave speed 168, 169, 196, 198, 199, 207, 234, 235, 239, 241, 244, 252, 253
  - weak formulation method 213
  - Wenzel model 361
  - Womersley number 42, 57, 145, 223, 235
- y**
- Young–Laplace equation 37, 75, 80, 327
- z**
- zero points method 210, 211, 218
  - zeroth order Kelvin functions 58, 145, 236
