 Al-based Lewis acids 296
 all-inorganic electrolytes, Mg/O₂
 batteries 303–307
 alternative anodes 31
 amides 79–80
 anode composition 213
 anode limited reversibility
 anode composition changes 213
 metallic lithium to lithium hydroxide
 conversion 213
 μ-XRD spectra 215
 μ-XRD technique 209
 rechargeable Li–air battery 209
 X-ray tomography images 216
 anodic aluminum oxide (AAO)
 separator 27
 anodic Li 212
 aprotic electrolyte 3
 aprotic Li–O₂ batteries
 carbon cathode degradation
 55–56
 electrolyte decomposition 54–55
 aqueous electrolyte 3, 294, 368–369
 aqueous gel electrolytes
 PAA 369
 PEO-based gel polymer 369–371
 PVA-based gel polymer 371–373

aqueous Li–O₂ batteries 57–59
 Arrhenius energy 319–320
 atomic layer deposition (ALD) 56,
 402
 attenuated total internal reflection
 infrared spectroscopy (ATR-IR)
 247
 autoxidation reaction 80, 99–100

b

band aid 388
 B-doped graphene 141
 binding energy 154
 bis(oxolato)borate ([BOB][−]) 69
 bis(trifluoromethanesulfonyl)imide
 (PMMITFSI) 378
 bis((trifluoromethyl)sulfonyl)imide
 ([TFSI][−]) 69
 Bohr magneton 258
 bulk oxidation, of Li₂O₂ 4
 1-*n*-butyl-3-methylimidazolium
 (BMIM)-BF₄ 296
 1-butyl-1-methylpyrrolidinium
 bis(trifluoromethanesulfonyl)
 imide (Pyr14TFSI) 18

c

carbonaceous materials
 CNTs 126–127
 commercial carbon powders 126
 doped 128
 graphene 127
 carbon corrosion
 discharge process 104–106
 recharge process 106

 model construction 357–358
 SEIRA-based model system 252
 self-defense redox mediator (SDRM)
 135
 self-interaction error (SIE) 334, 338
 self-propagated redox process 223
 separator, ZABs 270
 shell isolated nanoparticle enhanced
 Raman spectroscopy (SHINERS)
 235
 signal-to-noise (S/N) ratio 223
 single-step and multi-step reduction
 312
 single-walled carbon nanotubes
 (SWNTs) 384
 singly occupied molecular orbital
 (SOMO) 157
 sodium–O₂ battery 5–7
 solid electrolyte interphase (SEI) 12,
 51, 66, 112, 114–115, 308
 solid Li-ion conductors 86
 solid-state electrolytes 2, 3, 29–30,
 86–87
 solid-state Li–O₂ battery 399–400
 solid-to-solid catalysis 222
 solution-phase mechanism 68
 spectroelectrochemical cell 250, 251
 sputtering 254
 stainless steel mesh 381–382
 standard hydrogen electrode, (SHE) 2
 Stokes scattering 238
 sulfolane (tetramethylene sulfone) 77

- sulfones 76–78
- superconducting quantum interference device (SQUID) magnetometry 50
- superoxide-based Li–O₂ batteries 52–54
- superoxide radical anion (O₂^{•-}) 11, 66
- surface delithiation 4
- surface enhanced infrared absorption spectroscopy (SEIRAS) 248
- surface enhanced Raman spectroscopy (SERS) 78, 399

- t**
- tetraalkylammonium cations (TAA⁺) 160, 239
- tetraalkylammonium
 - trifluoromethanesulfonate 82
- tetrabutylammonium perchlorate (TBA⁺ClO₄⁻) 242, 255
- tetraethylene glycol dimethyl ether (TEGDME) 18, 44, 69, 99, 158, 210
- tetrafluoroborate([BF₄]⁻) 69
- tetrahydrofuran (THF) 158, 296, 303, 371
- 2,2,6,6-tetramethylpiperidinyloxy (TEMPO) 13, 133, 154
- tetrathiafulvalene (TTF) 133, 180–182, 257
- three dimensionally ordered mesoporous (3DOM) carbon 106
- TiC nanopowders 110
- time-dependent DFT (TDDFT) 333
- tissue-directed/reinforced bifunctional separator/protection film (TBF) 25
- transition metal oxides 108, 275
 - advantages of 130
 - air electrode 275–278
 - Co₃O₄ NFs 131
 - GNFs 131
 - perovskite catalyst 131–133
 - redox mediator 133–135
- transition state theory (TST) 340
- transmission electron microscopy (TEM) 47, 399
- transmission soft X-ray microscopy (TXM) 51
- triethyl phosphate (TEP) 18
- trifluoromethanesulfonate 69, 295
- triple-phase boundary (TPB) 222
- tris[4-(diethylamino)phenyl]amine (TDPA) 182–183

- u**
- ultraviolet– visible (UV/Vis) range 234
- UV/visible spectroscopy
 - clear transitions 254
 - metal–O₂ battery studies 255–257
 - saturated compounds 254

- v**
- voltaic efficiency 314
- voltammetric oxidation 236

- w**
- Wannier functions (WF) 355
- water contamination 111–112
- wearable electronics 367

- x**
- X-ray diffraction (XRD) 45, 222
 - ex situ* 219
 - patterns 211
- X-ray photoelectron spectroscopy (XPS) spectra 15
- X-ray scattering patterns 207

- z**
- Zeeman splitting 258
- zincate ions, supersaturation of 267
- zinc electrode 266–268, 272
- zinc ions migration 403
- Zn–air battery (ZAB) 372, 402–403
 - air electrode
 - OER 272–273
 - ORR 271–272
 - structure of 271
 - domestic/industrial applications 265

- electrocatalyst
 - inorganic–organic hybrid materials 278–282
 - metal-free materials 282–288
 - noble metals and alloys 274–275
 - transition metal oxides 275
- electrolyte 268–270
- LIB 265
- separator 270
- zinc electrode 266
- Zn–O₂ battery
 - high power rechargeable batteries 403
 - zinc morphology 402
