Index

a

Abel–Ruffini theorem 279
absolute rate theory 146
abundance and linearization 190–191
acetylene, vinyl chloride from 99
activation energy 143–153
  apparent activation energy 146–147, 152–153
active center 17
active site 17, 413, 426
adsorption mechanism 79, 244, 269
  buffer step 235
  classical 234
  consecutive 209, 223, 226
  kinetic polynomial 274–276
  oxidation of carbon monoxide 247–249, 263, 289
  parallel 209–210, 213–232
  three-step 234, 236, 243, 263
ammonia oxidation 206, 207, 210, 226
ammonia synthesis 11, 78–79, 82, 115
apparent partial reaction order 145–152
applied kinetics 3
Arrhenius temperature dependence 280
Arrhenius-type kinetic coefficients 264
asymptotic stability 182–184, 194
autocatalytic reaction 204, 234

b

batch reactor 1, 32, 34
  irreversible reaction 36–38
    half-life point 37
  parallel *vs.* consecutive reactions 40–43
  reversible reaction 38–40, 384–388
    equilibrium point 385, 387
    half-life point 385
    point of intersection 386–387
    swapping the equilibrium 387–388
Belousov–Zhabotinsky reaction 203
bifurcation 189, 217, 227, 243
Boreskov–Horiuti representation 274, 277, 278
Boreskov molecularity 113, 277
buffer step
  Michaelis–Menten mechanism 97
  oscillation 235
  single-route mechanism 125–126
butane, dehydrogenation 99

c

Carberry number 54
carbon monoxide (CO) oxidation 78, 96, 190, 223, 239–242, 311, 345–347
  adsorption mechanism 209, 213, 235, 247, 263, 289
  impact mechanism 210, 246, 247
catalyst characterization 316, 328, 333, 427
catalyst composition changes 2
  catalyst pellet, gradients 49–51
  catalyst oxidation degree 350–352
catalytic cycle 78, 79

Kinetics of Chemical Reactions: Decoding Complexity,
Second Edition. Guy B. Marin, Gregory S. Yablonsky, and Denis Constales.
© 2019 Wiley-VCH Verlag GmbH & Co. KGaA. Published 2019 by Wiley-VCH Verlag GmbH & Co. KGaA.

catalytic oscillators
  self-sustained oscillation model
    CO oxidation, mechanism for 240
    mass transfer, surface oxygen 242
    non-reactive surface substance 239
    relaxation oscillation 239
  simplest catalytic oscillator
    adsorption mechanism 235
    autocatalytic reaction 234
    four-step mechanism 238
    trigger system 234
catalytic trigger 237
chemical calculus 417, 418, 427, 429
chemical complexity 1
chemical kinetics 407–408, 412
  applied kinetics 3
  decoding complexity 2
  detailed kinetics 3
  graph theory 93–94
  gray-box approach 4–5
  history of 8–11
  joint kinetics 383
  kinetic fingerprints 5–6
  mathematical kinetics 3, 7–8
  non-steady-state kinetic screening 6
chemical relaxation, types of 170
chemical surface transformations 209
chemical time 407
chemicogeometric approach 417
clock time 1
column vector 65
continuous stirred-tank reactor (CSTR)
  comparison with TAP reactor and PFR 315–318
  half-life space time 403
  ideal 33, 35
  irreversible reaction
    point of intersection 388
  net rate of production 36, 46
  non-isothermal 203
  non-steady state 43–45, 47–48, 195–197
  reversible reaction 388
    end products intersection 389, 402
    steady state 388, 394, 402, 403
coupling, kinetic 126
coupling parameter 126–127, 129–131
coupling reaction 121
  kinetic resistance 164
  two-step mechanism 147–149
  three-step mechanism 156–157
Cramer's rule, kinetic 105–106, 108
critical simplification, principle 289, 296–297
critical stoichiometry 291
critical zerofication 293

d

Damköhler number 33, 44, 53–55
decoding chemical complexity 2
  advanced experimental kinetic tools 427
  mathematical tools 429
dehydrogenation of cyclohexane 265
desorption coefficient 291
detailed equilibrium/detailed balance 177
detailed kinetics 3
detailed mechanism 2
diffusion stoichiometry 291
dimensions of kinetic parameters 24–26
dissipative function 179

e

electrothermograph technique 206
elementary reaction
  definition 19
  heterogeneous gas–solid catalytic reactions 21–22
  homogeneous reactions 19–21
  natural classification 19
  rate expressions 22–23
elementary steps 17, 18
Eley–Rideal mechanism 79, 210, 269
enzyme-catalyzed reaction 94, 392
equilibrium approximation 191, 280
equilibrium point 177, 385, 386
equilibrium state 169
equilibrium subsystems 267

Eulerian kinetic point 43
external heat transfer 54–55
external mass transfer 51, 53–54
external time 1

f

Fourier transform, Y procedure 359–360, 363
furan oxidation 348–352

g

gas–solid catalytic reaction 411, 413
geometric approach 417
Gibbs free energy function 179
Gibbs rule, modified 72
graph recipe 116
graph theory 93–94
  derivation of reaction rate of complex reaction 101–102
  reaction weights 104, 106
  spanning tree 106, 107, 109
gray-box approach 4–5, 165

h

heterogeneous catalysis
  external heat transfer 54–55
  external mass transfer 51, 53–54
  gradients at catalyst-pellet scale 49
  gradients at reactor scale 49
  guidelines 52
  internal heat transport 59
  internal mass transport 51–52, 56–59
  isothermal critical effects
    electrothermograph technique 206
    extinction process 206
    ignition process 206
    multiplicity of steady states 205–207
    self-sustained oscillations 207
  non-steady-state operation 59
heterogeneous catalytic kinetics 413
heterogeneous catalytic oxidation 289
heterogeneous catalytic systems 194
heterogeneous gas–solid catalytic reactions 21–22
heterogeneous gas–solid catalysis 75
heterogeneous reactions 2
homogeneous chain reactions 19, 194
Horiuti–Boreskov problem 112–114, 297
Horiuti matrix 80, 268–270
Horiuti numbers 77, 113, 268, 277
Horiuti question 102
Horiuti's rule 81–83, 99–101
Horn–Jackson–Feinberg mechanism 247–250
Hougen–Watson (HW) equation 265, 273
hydrogen oxidation
  elementary steps 17
  kinetic resistance 163
  mechanism 96, 124, 158, 248
  reaction 17, 75, 207
hydrogenation, liquid phase 97, 119–120
hypergeometric approximations 280
hypergeometric functions 279
hysteresis 205–206
  oxidation of carbon monoxide 207–208, 223, 242
  parallel adsorption mechanism 221
hysteresis thermodynamics 291

i

ideal reactors
  batch reactor 32, 34
  continuous stirred-tank reactor 33, 35
  plug-flow reactor 34, 35
  pulse reactor 35–36
ignition point 291
imaginary roots 187
impact mechanism 79, 210–212, 269
  kinetic polynomial 273
  oxidation of carbon monoxide 246–250
independent routes, Horiuti's rule 99–101
internal heat transport 59

internal mass transport 51–52, 56–59
internal/intrinsic time 1
interrogative kinetics 310, 352–353
irreversible adsorption 45, 220, 224, 230, 291, 330–332, 334, 336–337, 354
irreversible reaction 36–39, 43–44, 58, 176–177, 265, 336–337, 345, 361, 392
  apparent activation energy 146–147
  apparent partial reaction order 145–146
  half-life point 386
  point of intersection 386–388
isomerization mechanism 77, 97, 108, 115, 138, 145, 146, 152, 156
isomerization reaction 24, 77, 81, 96, 106, 114
  butenes 404
  characteristic equation 172
  rate equation 108, 115, 137, 138, 143
  relaxation 173, 176–177

j

joint kinetics
  events 383–384
    classification 395
    equilibrium 383, 385
    coincidences 383–384, 392, 401
    intersection 383, 386–389, 391–392, 394–395, 397
      end products 389, 402–403
      special points 402
      single-point 400, 401
      triple 401
    mapping 384, 392–393, 395
    maximum 383, 392, 395, 397, 401
    ordering 384, 393, 397–399
  invariances 383–384
    dual experiment 389–391
    isomerization of butenes 404

k

kinetic dependences
  reaction rate 217
  slow relaxation phenomenon 242
    steady-state 242
    unsteady-state 242
kinetic experiments
  batch reactor 32, 34, 36
  closed reactors 29
  continuous stirred-tank reactor 33, 35, 43
  dual experiment 389–391
  experimental requirements 29–30
  heterogeneous catalysis 49
  kinetic-model-free analysis 46–49, 317–318
  material balance 30–31
  molecular beam 307–308
  open reactors 29
  plug-flow reactor 34, 35, 43
  pulse reactor 35–36
  swapping-the-equilibrium experiment 387–388
  TAP reactor 307
    state-altering experiment 310, 361
    state-defining experiment 309–310, 314, 348
  thin-zone TAP reactor 45–46, 334, 354
  transport in reactors 31–32
kinetic fingerprints 5–6
kinetic mass-conservation equations 74
kinetic-model-free analysis
  non-steady-state 47–49, 318
  steady-state 46–47, 317–318
kinetic modeling 3, 155
  direct problem 155
  inverse problem 155, 159
kinetic monitoring, state-by-state 316–317, 348–352
kinetic multiplicity 116
kinetic polynomials 4, 5, 264, 290
  adsorption mechanism 274–276
  applications 266, 282, 289, 295
    WGS reaction 283–289
  equilibrium subsystems 267
  hypergeometric functions 279–280
  impact mechanism 273

kinetic resistance 287–288
properties 273
quadratic monic 272
resultant 270–272
theory 266, 297
kinetic resistance 110, 112, 137, 159–160
coupling reaction 164
hydrogen oxidation 163–164
linear mechanism 164
sulfur dioxide (SO_2) oxidation 161–163
King–Altman graph 95, 106
Knudsen diffusion 58, 307, 313, 327

l

Langmuir dependence 143, 154
Langmuir mechanism 263, 269
Langmuir–Hinshelwood (LH) equation 79, 210, 265, 273, 338, 428
Langmuir–Hinshelwood–Hougen–Watson (LHHW) equation 159, 266
Laplace reactivities 337
Laplace transform 354, 356, 360
Laplace transformation 333
laws of mass conservation 68–70, 74
l'Hôpital's rule 43
limit cycles 181
linear algebra
column vector 65, 68, 73
of Horiuti numbers 77
components and their number 70–72, 74
conservation law *vs.* kinetic mass-conservation law 74
Horiuti numbers 75–80
laws of mass conservation 68–70
matrices and independent routes of complex reactions 80–83
matrix
general form 65
Horiuti 80
molecular 68, 70–71, 74
square 66
singular 66
stoichiometric 72, 80–82
transpose 66, 68, 80
zero 80
matrix augmentation and reduction 84
matrix determinant 66, 67
matrix operations 65–66
matrix rank 67, 70–72, 80–81
mechanisms 75–80
modified Gibbs rule 72
molecular matrix 68
Python/Sympy 69, 83–88
row vector 65
stoichiometric matrix 72–74, 80
linear balance equations 268
linear/quasi-linear multiscale models 418
linear reaction mechanisms 95
linear relaxation 171–173
linear single-route mechanisms 95
liquid-phase hydrogenation 97, 119–120
local stability 181
definition 182–184
system with two variables 184–188
Lorenz attractor 182
Lotka-Volterra equations, catalytic oscillators 234
low-energy electron diffraction (LEED) technique 240
Lyapunov function 182, 189, 416
Lyapunov stability 182–183

m

Macaulay resultant 272
malonic acid (MA) 204
Marcelin-de Donder formalism 428
Mason's rule 106, 108
mass-action law 20
material balance 30
mathematical chemical kinetics 3, 415, 416
matrix augmentation and reduction 84
matrix determinant 66
matrix rank 67
methane, steam reforming 17, 80, 100, 123, 157–158

methanol conversion 319–322
Michaelis–Menten mechanism 95–97, 117–118, 156, 194, 416
microscopic reversibility 177
minimal mechanism 155–159
  five-step catalytic 158
  four-step catalytic 157
  three-step catalytic 156–157
  two-step catalytic 156
molecular formula 115
molecular matrix 68
Monte Carlo methods 205
most abundant reaction intermediate (mari) 191
multiplicity of steady states 5, 203, 205–208, 211
  criterion 220
  and hysteresis 205
  interaction of surface intermediates 223, 244
  mechanisms 212, 226–227, 234, 243
  in oxidation of carbon monoxide 207, 208, 289–291
  reversibility of adsorption steps 224
multiscale linear system 176

n

natural classification, 19
n-hexane, catalytic reforming 101–103
nitric oxide (NO) 99
non-ideal factors
  hidden reversible process 250
  isothermal critical phenomena 250
  non-monotonic dependence 250
non-steady-state kinetic screening 6
non-steady-state models 1, 169, 181
  abundance 190–191
    solid-catalyzed gas-phase reaction in CSTR 195–197
  equilibrium approximation 191
  quasi-steady-state approximation 197–198
  rate-limiting step approximation 191–192
non-steady-state operation 59

o

oscillations 170, 181, 237–238
  Brusselator model 205, 235
  chaotic 176, 182, 207
  damped 173, 176, 179, 188, 233
  harmonic 207
  Oregonator model 205, 235
  rate 207, 227, 244, 246
  regular 176
  self-sustained 188–189, 203–205, 227, 230, 235, 243, 250
    oxidation of carbon monoxide 207, 208, 223, 240–242
    relaxation 207, 239, 251
oscillators
  catalytic 169, 238
  simplest catalytic 238
oxidation 206, 207, 230, 320–321
  carbon monoxide (CO) 78, 96, 190, 223, 239–242, 311, 345–347
    adsorption mechanism 209, 213, 235, 247, 263, 289
    impact mechanism 210, 246, 247
  catalytic 208, 289, 411
  citric acid 203
  ethylene 229, 322–324
  furan 348–352
  hydrogen 17, 75, 124, 158, 163, 244, 246
  propylene 334
  sulfur dioxide (SO_2) 113, 120, 157, 161–163
oxidation-reduction, alternating 239
oxidation degree 350–252

p

parallel adsorption mechanism 213
  vs. consecutive adsorption mechanisms 40–43, 209–210
  critical slowing down phenomenon 228
  induction and extinction 230
  intrinsic and extrinsic 229
  linear mechanisms models 233
  nonlinear mechanisms models 233
  qualitative dependences 231

steady states and null clines 233
transient characteristics 228
phase diagram 182
phase portrait 182, 188–189
phase space 169, 179–181, 183
phase trajectory 181
closed 188–189
rest point 181–187
limit cycle 181, 188
plug-flow reactor (PFR) 34, 35, 48–49
comparison with TAP reactor and CSTR 315–318
differential 35, 47, 48
ideal 34, 35, 47
integral 36
net rate of production 36, 47
non-isothermal 203
non-steady state 48
nonuniformity 315, 335
steady state 43, 47
Poincaré–Bendixson criterion 189, 235
Poincaré–Bendixson theorem 237
propylene, from methanol 319–320
propylene oxidation 334
pseudo-steady-state approximation (PSSA) 190
pulse reactor 35–36
Python/Sympy 83–88

q

qualitative theory, of differential equations 180–182
quasi-steady-state approximation (QSSA) 103, 190, 192–198, 267–268, 271–272, 413
quasi-steady-state kinetic equations 104, 105

r

radicals 17, 75, 194, 413
rate coefficients 20, 178
rate equations, simplifications
fast step 140
irreversible step 142
quasi-equilibrated step 141–142
rate-limiting step 141, 276–278
rate expressions 22–23
rate-limiting step approximation 191–192, 418
reaction mechanism 2, 17–19
autocatalytic 234–235
complex reaction 68, 75, 93, 414, 426
consecutive reaction 40–43, 192, 392
five-step mechanisms
ammonia synthesis 78–79, 82
oxidation of hydrogen 124–125, 158, 163
four-step mechanisms 238, 243
steam reforming of methane 122–124, 157
synthesis of vinyl chloride 78, 81
Horn–Jackson–Feinberg mechanism 247–249
linear mechanisms 100, 102, 109, 165, 171, 174, 175, 271
enzyme-catalyzed 95
minimal 155–158, 161
multiroute 78, 263
single-route 78, 95–96, 99, 263, 268
kinetic polynomial 272
all steps irreversible 152, 153
all steps reversible 95, 153
two-route 78, 98, 99, 270
common intermediate 127–129
common step(s) 129–131
nonlinear mechanisms 78–79, 212, 246, 263, 266
parallel reaction 40–43, 392
partial 392, 393
Temkin–Boudart mechanism 150–152, 263
three-step mechanisms 209, 234, 243
coupling reaction 121–122, 156
isomerization reaction 77, 81, 138, 156, 171–173, 176

reaction mechanism (*contd.*)
one reactant participating in more than one step 151
oxidation of carbon monoxide 210, 247, 263, 289
oxidation of sulfur dioxide 119–121, 157, 161
water-gas shift (WGS) reaction with buffer step 125–126
Turner–Sales–Maple 239–240, 242, 246
two-step mechanisms 81, 156, 210, 239
coupling reaction 147–150
irreversible reaction 145–147
isomerization reaction 174–176
liquid-phase hydrogenation 119–120
Michaelis–Menten 117–118, 392
oxidation of carbon monoxide 211, 246
water-gas shift (WGS) reaction 75–76, 118–119, 150–152, 211, 263
reaction rate 338
complex reaction 101–103
forward and reverse 110–111
Horiuti–Boreskov problem 112–114
kinetic Cramer's rule 105–106, 108
and net rate of production of component 23–24
overall reaction 114–116
single-route linear mechanism 111–112
reaction routes 78
number of linearly independent 80–83
reactivities, TAP, of solid materials 337–338, 345
Arrhenius plot 347
definitions 338
equations 342–343
reactors with perfect mixing 169
real roots 186
relaxation 169
after-peck 192
in closed system 177–180
methodology 307
times 173–176, 316
residence time 1, 33
resultant reaction rate 270
reverse reaction rate
Horiuti–Boreskov problem 112–114
reversible reaction 38–40, 44–45
row vector 65

S

saddle point 186
singular matrix 66
square matrix 66
stability
global 181, 183, 189
local 182–184
stable focus 186, 188
stable node 186
state-by-state kinetic monitoring 316–317, 348–352
steady-state catalytic reactions 413
steady-state chemical kinetics
apparent activation energy 143–144, 146, 153
apparent partial reaction order 143–153
applied kinetics 5
assumptions / simplifications
comparison 280–282
critical simplification 295–297
fast step 140
hypergeometric approximation 280–282
irreversible step(s) 142
quasi-equilibrated step(s) 141–142
rate-limiting step 141, 276, 280, 295
thermodynamic branch 279–282
vicinity of thermodynamic equilibrium 278–279
kinetic dependence 154, 212, 221, 275, 316
WGS reaction 283–289

kinetic model 104, 274
kinetic resistance 112, 137, 159–160, 165, 174, 279, 283, 287
overall reversibility 150, 152–153
reaction rate 105, 109, 277, 280
Arrhenius parameters 138, 144
complex reaction 101–102
cycle characteristic 111–112, 126, 264, 274, 278
linear mechanism, general form 105
single-route mechanism 111–112, 117
multiroute mechanism 126
graph recipe 116
Horiuti–Boreskov problem 112–114
isomerization reaction 108–111, 115–116, 137–140, 143, 173, 176
oxidation of carbon monoxide 212
steady-state isotopic transient kinetic analysis (SSITKA) method 174, 310, 316–318
steam reforming of methane 18, 100, 123, 157–158
stoichiometric coefficients 21, 72–74, 271
stoichiometric matrix 72, 80, 248
stoichiometric number 77
strange attractors 182
sulfur dioxide (SO_2), oxidation of 113, 120–121
kinetic resistance 161–163

t

TAP (temporal analysis of products)
advantages 307
applications 307, 318–320
principles 312–314
Y procedure 355
TAP experiments
interrogative cycle 310
interrogative kinetics 310
kinetic characterization 307–308, 317, 361
moment-based analysis 336–343
multipulse 310, 311, 317, 318, 324, 345, 348
numerical 361–364
pulse-response 309, 311, 327, 329, 330, 344
pump-probe 322–323
single-particle 366
single-pulse 310, 312, 319, 333, 362
state-altering 310, 361
state-defining 309–310, 314, 348, 367
theory 354
steady-state 310, 312, 314
transient 310, 314, 348
TAP reactivities 337–338, 342–343
oxidation of carbon monoxide 345–347
TAP reactor
one-zone 318, 327
single-particle 311
thin-zone 311, 333, 336, 345, 348, 355
nonuniformity 334–335
three-zone 311, 315, 318, 332, 355, 358
two-zone 332
uniformity 311–315, 355, 358, 361, 366
Temkin's graph method 100
Temkin's rule 174–176
Temkin–Boudart mechanism 76, 104
WGS reaction 150, 152
termolecular reaction 227
thermodynamic branch 279–282
thermodynamic constraints 417
thermodynamic equilibrium, vicinity of 278–279
thermodynamic Lyapunov functions 416
Thiele modulus 56–57
thin-zone TAP reactor (TZTR)
net rate of production 36
formal analysis 45–46

three-step adsorption mechanism 263
Tikhonov's theory of singularly perturbed differential equations 193
time-scale separation 297
transfer matrix 354, 358
transport in reactors 31
transpose of matrix 66
Turner–Sales–Maple model 239
turnover frequency 174, 413
Twigg mechanism 249

u

unit matrix 66
unstable focus 186, 188
unstable node 187

v

Van't Hoff's natural classification 19, 26, 409, 410
Van't Hoff's paradigm 410, 411
vinyl chloride synthesis 78, 81

w

water-gas shift (WGS) reaction
  buffer step 125
  experimental results 283–289
  forward 285
  impact mechanism 211
  kinetic resistance 282–283, 287
  reverse 285
  Temkin–Boudart mechanism 76, 150, 152, 211
  two-step mechanism 76, 95–96, 118–119, 211, 263
Weisz–Prater criterion 58

y

Y procedure 354–366
  fundamental equations 358–359
  Laplace to Fourier domain 360–361
  numerical experiments 361–364

z

zero matrix 73
zero-order approximation 267
