Preface *xiii*

1	Introduction	<i>1</i>
1.1	What Is Desalination?	<i>1</i>
1.2	Aims of Desalination Processes	<i>2</i>
1.3	Desalination Processes	<i>3</i>
1.4	Desalination Technologies	<i>6</i>
1.4.1	Thermal Desalination System	<i>6</i>
1.4.2	Membrane Desalination System	<i>10</i>
1.5	Which Desalination System Is the Best?	<i>12</i>
1.6	Thermo-Physical Properties of Water	<i>13</i>
1.6.1	Potable Water	<i>13</i>
1.6.2	Seawater	<i>13</i>
	References	<i>22</i>
	A. Review Questions	<i>23</i>

Part I Thermal Desalination Systems *27*

2	Multi-effect Evaporator (MEE)	<i>29</i>
2.1	Introduction	<i>29</i>
2.2	Vaporization	<i>29</i>
2.3	MEE Processes	<i>31</i>
2.4	MEE Configurations	<i>33</i>
2.5	Mathematical Modeling Algorithm for Thermal Systems	<i>34</i>
2.6	MEE Mathematical Model	<i>38</i>
2.6.1	Forward Flow Mathematical Modeling MEE-FF	<i>39</i>
2.6.1.1	Energy Analysis	<i>39</i>
2.6.1.2	Exergy Analysis	<i>45</i>
2.6.2	Backward Flow Mathematical Model MEE-BF	<i>53</i>
2.6.3	Parallel Flow Mathematical Model MEE-PF-Cross Type	<i>60</i>
2.7	MEE Integrated Auxiliary Devices	<i>61</i>
2.8	Characteristics of MEE Desalination Systems	<i>63</i>

2.9	MEE Energy Consumption and Cost	66
	References	66
	A. Review Questions	67
	B. Problems	69
	C. Essay, Design, and Open-Ended Problems	73
3	Multi-stage Flashing (MSF)	77
3.1	Flashing Stage	80
3.2	MSF Once-Through Configuration MSF-OT	81
3.2.1	MSF-OT Once-Through Model	82
3.2.1.1	Optimum Number of MSF Stages	88
3.3	MSF-Brine Recirculation (MSF-BR)	88
3.3.1	Detailed Mathematical Model of MSF-BR System	89
3.4	MSF with Brine Mixer (MSF-BM)	102
3.5	Material of Construction	103
	References	103
	A. Review Questions	103
	B. Problems	105
	C. Essay, Design and Open-Ended Problems	110
4	Vapor Compression: Thermal Vapor Compression (TVC), Mechanical Vapor Compression (MVC), and Mechanical Vapor Recompression (MVR)	113
4.1	Thermal Vapor Compression (TVC)	114
4.2	TVC Mathematical Modeling	116
4.3	Mechanical Vapor Compression (MVC)	127
4.4	SEE-MVC Mathematical Modeling	128
4.5	Mechanical Vapor Recompression (MVR)	133
4.6	Characteristics of VC Desalination System	135
	References	136
	A. Review Questions	137
	B. Problems	138
	C. Essay, Design and Open-Ended Problem	141
Part II Membrane Desalination Systems		145
5	Pressure Gradient Driving Force: Reverse Osmosis (RO), Nanofiltration (NF), Ultrafiltration (UF), Microfiltration (MF)	147
5.1	Semipermeable Membrane: Properties and Modules	147
5.2	Membrane Modules (Configurations)	150
5.3	Natural Osmosis Phenomenon	152
5.4	Reverse Osmosis (RO)	155
5.5	Membrane Performance	157
5.5.1	Recovery Ratio (RR)	157

5.5.2	Net Driving Pressure (NDP)	158
5.5.3	Solute Rejection Rate (R _{jR})	158
5.5.4	Volume Recovery (VR)	158
5.5.5	Permeate Flux (<i>J</i>)	158
5.5.6	Specific Energy Consumption (SEC)	158
5.5.7	Concentration Polarization Factor (β)	158
5.5.8	Rate of Solvent Pass	159
5.5.9	Rate of Solute Pass	159
5.5.10	Concentration Factor (CF)	159
5.6	RO System Components	162
5.7	RO Advantages and Disadvantages	163
5.8	RO Performance Using Software	164
5.9	RO Mathematical Model	175
5.10	Energy Recovery Device (ERD)	177
5.10.1	Pressure Exchanger (PX)	178
5.11	MF, UF, and NF Membranes: Materials and Applications	187
5.11.1	MF and UF	187
5.11.2	Nanofiltration (NF)	187
	References	193
	A. Review Questions	193
	B. Problems	197
	C. Essay, Design and Open-Ended Problems	201
6	Electrical Potential Driving Force: Electrodialysis (ED), Electrodialysis Reversed (EDR)	205
6.1	Electrodialysis	205
6.2	Electrodialysis Principle	208
6.3	Conservation of Ionic Mass	210
6.4	ED Mathematical Modeling	210
6.5	ED Characteristics	212
6.5.1	Limiting Current Density (LCD)	213
6.5.2	Substance Removal Rate (<i>G</i>)	213
6.5.3	Normality (<i>N</i>)	214
6.5.4	Current Intensity (<i>I</i>)	214
6.6	Advantages and Disadvantages of ED	217
6.7	Electrodialysis Reversed (EDR)	218
	References	218
	A. Review Questions	219
	B. Problems	220
	C. Essay, Design and Open-Ended Problems	222
7	Temperature Gradient Driving Force: Membrane Distillation (MD)	225
7.1	MD Processes and Configurations	227
7.2	MD Advantages and Disadvantages	229
7.3	Characteristics of Hydrophobic Membranes	230

7.3.1	Liquid Entry Pressure (LEP)	231
7.3.2	Trans-membrane Flux (N)	234
7.3.3	Membrane Thermal Conductivity (K_m)	234
7.4	Heat and Mass Transfer Models for DCMD	235
7.4.1	DCMD Heat Transfer Mathematical Model	235
7.4.2	MD Mass Transfer Model	237
7.4.2.1	Fouling and Scaling in MD	241
	References	242
	A. Review Questions	243
	B. Problems	245
	C. Essay, Design and Open-Ended Problems	245
8	Concentration Gradient Driving Force: Natural Osmosis, Forward Osmosis (FO), Pervaporation (PV), Dialysis	251
8.1	Forward Osmosis (FO)	252
8.1.1	FO Advantages and Disadvantages	255
8.1.2	FO Solvent and Solute Fluxes	257
8.1.3	FO Mass Transfer	259
8.1.4	FO Configuration	260
8.1.5	FO Concentration Polarization (CP)	264
8.2	Pervaporation (PV)	267
8.2.1	Pervaporation Mathematical Modeling and Performance Parameters	269
8.3	Dialysis	274
8.3.1	Neutralization Dialysis (ND)	276
8.4	Summary: Membrane Desalination Systems	277
	References	279
	A. Review Questions	280
	B. Problems	283
	C. Essay, Design, and Open-Ended Problems	285
	Part III Nonconventional Desalination Systems	289
9	Renewable Energy and Desalination: Solar, Wind, Geothermal	291
9.1	Solar Energy	294
9.1.1	Direct Solar Desalination Systems	295
9.1.1.1	Solar Pond	295
9.1.1.2	Solar Still	297
9.1.1.3	Internal Heat Transfer	298
9.1.1.4	External Heat Transfer	299
9.1.2	Indirect Solar Collectors	303
9.1.2.1	Thermal Solar Collectors (TSC)	303
9.1.2.2	Solar Photovoltaic (PV)	307
9.2	Calculation of Solar Radiation on Inclined Surface	307

9.3	Wind Energy	310
9.3.1	Wind Turbine Configurations	311
9.3.2	Wind Turbine Mathematical Model	311
9.3.3	Advantages and Disadvantages of Wind Turbine	322
9.4	Geothermal Energy	326
9.5	Geothermal Well Performance	329
9.5.1	Geothermal Energy and Desalination	330
9.6	Advantages of Geothermal Energy	332
	References	335
	Questions and Problems	337
10	Hybrid Desalination System	349
10.1	Case I: Cogeneration–MSF–RO Hybrid Desalination Systems	350
10.2	Case II: Hybrid SEF–Geothermal Desalination System	355
10.3	Case III: Hybrid MEE–Solar Desalination System	362
10.3.1	MEE–FF System	364
10.3.2	Solar Flat-Plate Collector	364
10.3.3	Mathematical Modeling for Solar Flat-Plate Collector	365
10.4	Case IV: Hybrid MD–RO Desalination System	368
10.4.1	Modeling and Simulation	368
10.4.2	Results and Discussion	370
10.5	Case V: Hybrid Humidification–Dehumidification Desalination System	373
	References	377
	Essay, Design, and Open-Ended Problems	378
	Appendix A Thermo-Physical Properties of Seawater	381
	Index	383
