Preface *xiii*

Section I Principle and Products Overview of Bioelectrosynthesis 1

- 1 Principle and Product Overview of Bioelectrosynthesis 3**
Fang Zhang, Yuquan Wei, and Guanghe Li
- 1.1 Introduction 3
 - 1.2 Evolution of Bioelectrosynthesis 6
 - 1.3 Fundamental Principles of Bioelectrosynthesis 9
 - 1.4 Plethora of Applications for Chemical Production 11
 - 1.4.1 Hydrogen Production 11
 - 1.4.2 Methane Production 12
 - 1.4.3 Alcohol Production 16
 - 1.4.4 Short-chain Organic Acid Production 17
 - 1.4.5 Ammonia Production and Nitrogen Recovery 23
 - 1.5 Key Factors for Improving MES Performance 26
 - 1.5.1 Electron Transfer from the Cathode to the Cell 26
 - 1.5.2 Cathode Materials 27
 - 1.6 Summary 29
 - References 29

Section II Biogas Production and Upgrading Technology via Bioelectrolysis 39

- 2 Hydrogen Production from Waste Stream with Microbial Electrolysis Cells 41**
Defeng Xing, Yang Yang, Zhen Li, Han Cui, Dongmei Ma, Xiaoyu Cai, and Jiayu Gu
- 2.1 Construction of MEC and Scale-up 42
 - 2.1.1 Laboratory-Scale MEC 44
 - 2.1.2 Pilot-Scale MEC 46

2.2	Electrode Material of MEC	47
2.2.1	Anode of MEC	47
2.2.2	Cathode of MEC	49
2.2.2.1	Cathode Base Materials in MEC	49
2.2.2.2	Cathode Catalysts in MEC	49
2.2.2.3	Biological Catalysts in MEC	51
2.3	Effect of Operation Conditions on Hydrogen Production	51
2.3.1	Effect of Substrate on Hydrogen Production	51
2.3.2	Effects of Applied Voltage and Magnetic Field on Hydrogen Production	52
2.3.3	Effect of pH on Hydrogen Production	54
2.3.4	Effect of Temperature on Hydrogen Production	54
2.4	Electroactive Biofilm Microbiome and Syntrophic Interaction in MEC	54
2.4.1	Anodic EAM and Biofilm Formation	55
2.4.2	EAM in the Cathode	56
2.4.3	Microbial Community and Syntrophic Interaction	58
2.4.3.1	Pure Culture and Mixed Culture	58
2.4.3.2	Microbiome in Electroactive Biofilms	58
2.4.3.3	Suppressing the Methanogens	59
2.5	Coupled System for Biohydrogen Production	60
2.5.1	MEC–MFC-Coupled System for Biohydrogen Production	60
2.5.2	AD–MEC-Coupled System for Hydrogen Production	60
2.5.3	Solar-Powered MEC-Coupled System for Hydrogen Production	61
2.5.4	Other Modified MEC System for Hydrogen Production	61
2.6	Challenges and Outlook	62
	Acknowledgment	63
	References	64
3	A Promising Strategy for Renewable Energy Recovery: Conversion of Organic Wastes to Methane via Electromethanogenesis	71
	<i>Zhiqiang Zhao and Yaobin Zhang</i>	
3.1	Introduction	71
3.2	Advances in Electromethanogenesis	72
3.3	Mechanisms of Electromethanogenesis	75
3.3.1	Electron Transfer from Electrode to Methanogens	75
3.3.2	Microbial Communities of Biocathode	77
3.4	Applications of Electromethanogenesis	81
3.4.1	Renewable Energy Storage	81
3.4.2	Biogas Upgrading	82
3.4.3	Organic Waste Treatment	83
3.5	Outlook	86
	References	87

4	Microbial Electrolysis Cell (MEC): An Innovative Waste to Bioenergy and Value-Added By-product Technology	95
	<i>Abudukeremu Kadier, Najeeb K. N. Al-Shorgani, Dipak A. Jadhav, Jayesh M. Sonawane, Abhilasha S. Mathuriya, Mohd S. Kalil, Hassimi A. Hasan, and Khulood Fahad Saud Alabbosh</i>	
4.1	Introduction	95
4.2	Microbial Electrolysis Cell (MEC) for Hydrogen Production and Waste Treatment	96
4.2.1	Working Principles	96
4.2.2	Advantages of MEC Over Other Potential Waste Treatment Technologies	97
4.3	Different Types of Waste Feedstocks Used in MECs	99
4.3.1	Simple or Defined Substrates	99
4.3.1.1	Glucose	106
4.3.1.2	Acetate	106
4.3.1.3	Glycerol	106
4.3.1.4	Proteins	107
4.3.1.5	Volatile Fatty Acids (VFAs)	107
4.3.1.6	DF Effluents and Other Pure Substrates	108
4.3.2	Wastewater Feedstocks	108
4.3.2.1	Domestic Wastewater (DW)	108
4.3.2.2	Industrial Wastewater	109
4.3.3	Complex or Lignocellulosic Biomass Materials	110
4.3.4	Waste-Activated Sludge (WAS)	110
4.3.5	Agricultural Wastes and Landfill Leachate	113
4.4	Current Applications of MEC	113
4.4.1	Hydrogen Production and Ammonium Recovery from Urine	113
4.4.2	Metal Removal or Recovery from Wastes	115
4.5	Existing Challenges and Bottlenecks for the Use of Wastewaters as Substrates in MECs	117
4.6	Conclusion and Future Outlook	118
	Acknowledgments	119
	References	119
5	Methane Production at Biocathodes: Principles and Applications	129
	<i>Dandan Liu, Marco Zeppilli, Marianna Villano, Cees Buisman, and Annemiek ter Heijne</i>	
5.1	Introduction	129
5.2	Fundamentals of Methane-Producing Biocathode	131
5.2.1	Cathode Potential and Mechanism of Methane Production	133
5.2.2	Methane Production Rate	135
5.2.3	Current-to-Methane, Voltage, and Energy Efficiencies	136
5.2.4	Electron Donor for Methane-Producing BESs	138

- 5.3 Enhancing Methane Production Rates in AD 139
 - 5.3.1 AD + BES Combination 139
 - 5.3.2 BES + AD Combination 143
 - 5.3.3 BES Within AD Combination 143
- 5.4 Upgrading of Biogas 145
 - 5.4.1 Fundamental Aspects of Biogas Upgrading 145
 - 5.4.2 Alkalinity Generation in BES Biocathodes and CO₂ Removal 147
- 5.5 Storage of Renewable Energy Through Methane-Producing Bioelectrochemical System 150
- 5.6 Conclusions and Outlook 153
 - References 154

Section III Organic Production in Microbial Electrosynthesis System 161

- 6 Organic Synthesis on Cathodes 163**
Annie Modestra Jampala, Sai K. Butti, and Srinivasulu Reddy Venkata Mohan
 - 6.1 Carbon Reduction for Organics Synthesis at Cathode 163
 - 6.1.1 Gas Fermentation 164
 - 6.1.2 Microbial Electrosynthesis (MES) 165
 - 6.2 Acetate Synthesis 168
 - 6.2.1 Biochemistry of Acetate Synthesis 168
 - 6.2.2 Bacteria for Acetate Synthesis 171
 - 6.3 Formic acid Synthesis 171
 - 6.3.1 Direct and Indirect Conversion 172
 - 6.3.2 Production Yields and Optimizations 172
 - 6.4 Alcohol Synthesis 174
 - 6.5 Conclusions and Future Outlook 175
 - Acknowledgments 176
 - References 176

Section IV Chemical Products and Nitrogen Recovery 183

- 7 Inorganic Compound Synthesis in Bioelectrochemical System: Generation Rate Increase and Application 185**
Lei Gao, Xi-Qi Li, Ling Wang, Wen-Zong Liu, and Ai-Jie Wang
 - 7.1 Introduction 185
 - 7.2 Hydrogen Peroxide Produced in BES: Optimization and Application 186
 - 7.2.1 Electrode Optimization Design 188
 - 7.2.2 Membrane Material Selection 189
 - 7.2.2.1 Cation Exchange Membrane 192
 - 7.2.2.2 Anion Exchange Membrane 193
 - 7.2.2.3 Other Common Membranes 193

7.2.3	Operation Condition Optimization	194
7.2.3.1	Buffer Solution	194
7.2.3.2	Hydraulic Retention Time	195
7.2.3.3	Applied Voltage	195
7.2.4	Application of H ₂ O ₂ Production in BES	196
7.2.5	Summary	197
7.3	Metal Ion Reduction in BES: Waste Treatment and Metal Reuse	197
7.3.1	Metal Waste Treatment	197
7.3.2	Metal Reuse	198
7.3.3	Summary	199
7.4	Struvite Crystallization Recovery: Principle and Application in BES Systems	199
7.4.1	Principle of Struvite Crystallization Recovery	200
7.4.2	Struvite Crystal Recovery Applied in MFC	200
7.4.3	Struvite Crystal Recovery Applied in MEC	201
7.4.4	Summary	201
7.5	Ammonia Recovery and Other Inorganics Synthesis in BES Systems	202
7.5.1	Migration of NH ₄ ⁺ in BES Systems	202
7.5.2	Ammonia Recovery in BES Systems	202
7.5.3	Other Inorganics Synthesis in BES Systems	203
7.5.4	Summary	205
7.6	Outlook	205
	Acknowledgments	206
	References	206
8	Bioelectrochemical Ammonium Production – Nitrogen Removal and Recovery in BES	217
	<i>Guoqiang Zhan</i>	
8.1	Ammonium Migration and Recovery	218
8.2	Anodic Ammonium Oxidation	220
8.3	Nitrification/Denitrification in BESs	224
8.4	Existing Problems and Challenges	227
	References	227
9	Bioelectrochemical Systems for Heavy Metal Pollution Control and Resource Recovery	233
	<i>Bo Zhang, Wentao Jiao, and Heming Wang</i>	
9.1	Introduction	233
9.1.1	Brief Review of Commonly Used Technologies for Heavy Metal Pollution Control and Their Respective Limitations	233
9.1.2	Control of Heavy Metal Pollution Through (Bio)Electrochemical Processes	234
9.2	BES and its Application in Heavy Metal Pollution Control	236
9.2.1	Configuration of BES	236
9.2.2	BES Application in Treating Heavy Metal Laden Wastewater	238

- 9.2.2.1 BES with Abiotic Cathode 238
- 9.2.2.2 BES with Biocathode 244
- 9.2.3 BES Application in Controlling Heavy Metal Polluted Soils 246
- 9.3 Outlook and Concluding Remarks 247
- Acknowledgments 248
- References 248

Section V External Electron Transfer and Electrode Material Promotion 255

10 External Electron Transfer and Electrode Material Promotion 257

Fanghua Liu, Hengduo Xu, and Jiajia Li

- 10.1 External Electron Transfer 258
 - 10.1.1 Direct Electron Transfer 259
 - 10.1.2 Indirect Electron Transfer 260
- 10.2 Promotion of Material Development 262
 - 10.2.1 Carbon-Based Electrodes for Bioelectrosynthesis 263
 - 10.2.2 Metal-Based Electrode for Bioelectrosynthesis 264
- 10.3 Modified Electrodes for High Bioelectrosynthesis 265
 - 10.3.1 Electrode Modification with Carbon-Based Materials 265
 - 10.3.1.1 Carbon Nanotube 265
 - 10.3.1.2 Graphene 266
 - 10.3.1.3 Activated Carbon 269
 - 10.3.2 Electrode Decoration with Metal-Based Materials 269
 - 10.3.3 Electrode Decoration with Other Materials 270
- 10.4 Interspecies Electron Transfer Pathway 272
- 10.5 Future Perspectives 273
- References 274

11 External Electron Transfer: Pathway, Mechanism, and Microorganisms Involved 281

Cong Huang, Jun Nan, and Aijie Wang

- 11.1 External Electron Transfer of Cathode 281
 - 11.1.1 Interspecies Electron Transfer (IET) 282
 - 11.1.2 Direct Electron Transfer (DET) 283
- 11.2 Promotion of Material Development 284
- 11.3 Interspecies Electron Transfer Pathway 287
 - 11.3.1 Mechanism of MIET 289
 - 11.3.2 Mechanism of DIET 289
 - 11.3.3 IET Microorganisms 290
- References 290

12 Extracellular Electron Transport of Electroactive Biofilm 295

Xu Zhang

- 12.1 Electroactive Bacteria 295
 - 12.1.1 Role of Multiheme Cytochromes in Extracellular Electron Transport (EET) 295
- 12.2 Electron Transport Across *Geobacter*(-Dominated) EABs 297

- 12.2.1 “Metallic-like” Conductivity via Microbial Nanowires 297
- 12.2.2 Redox Conduction 298
- 12.2.3 Basic Electrochemical Characterization of Redox Conductors 300
- References 302

Section VI The Microbiology of Bioelectrosynthesis 307

13 Microbial Growth and Ecological and Metabolic Characteristics in Bioelectrosynthesis Systems 309

Qian Liu and Sihao Lv

- 13.1 Microbial Growth Kinetics and Energetics 309
 - 13.1.1 Stoichiometry of Microbial Growth Systems 309
 - 13.1.2 Electrode-Respiring Bacteria Kinetics 312
 - 13.1.3 MES-Associated Carbon Fixation Pathways 315
 - 13.1.3.1 Wood–Ljungdahl Pathway 315
 - 13.1.3.2 Reverse Tricarboxylic Acid Cycle 316
 - 13.1.3.3 3-Hydroxypropionate/4-Hydroxybutyrate Pathway 316
 - 13.1.3.4 Calvin–Benson–Bassham Cycle 317
 - 13.1.4 Bacterial Energetics 317
- 13.2 Microbial Ecological Characterization and Biofilm-Related Aspects 318
 - 13.2.1 Model Electroactive Microorganisms 318
 - 13.2.2 Electroactive Microorganism’s Ecology Characteristics 319
 - 13.2.2.1 Environmental Characteristics 319
 - 13.2.2.2 Metabolic Characteristics 320
 - 13.2.3 Microbial Biofilm Formation and Characteristics 320
 - 13.2.3.1 Electron-Release Anodic Biofilms 320
 - 13.2.3.2 Cathodic Biofilm for Hydrogen Production 321
 - 13.2.3.3 Cathodic Biofilm for Methane Production 321
 - 13.2.3.4 Cathodic Biofilm for Organic Acid Production 321
 - 13.2.4 Meta-omics Characterization 322
 - 13.2.4.1 Metagenomics of MES-Associated Microorganisms 322
 - 13.2.4.2 Metatranscriptomics of MES-Associated Microorganisms 322
- 13.3 Influence of Bioelectrochemistry on Microbial Community and Metabolism Pathway 323
 - 13.3.1 Influence of Bioelectrochemistry on Microbial Community 323
 - 13.3.2 Effects of Electrochemistry on Microbial Activity 324
 - 13.3.3 Influence of Bioelectrochemistry on Microbial Metabolism Pathway 324
 - References 325

14 An Update Perspective of Electron Transfer in Electrosyntrophic Methanogenesis: From VFAs to Methane 333

Weiwei Cai, Linna Cai, and Hong Yao

- 14.1 Introduction 333
- 14.2 Interspecies Hydrogen/Formate Electron Transfer and Transport/Flow in Methanogens 333
- 14.3 Beyond Hydrogen/Formate Electron Carriers 336

14.3.1	Direct Interspecies Electron Transfer for Acetotrophic Methanogens	336
14.3.2	Novel Electron Donor for Hydrogenotrophic Methanogens	337
14.4	Power Drives Interspecies Electron Transfer (Kinetics and Energetics)	339
14.5	Multi-VFA Degradation Disturbance by Electrosynthetic DIET	343
14.5.1	Mechanism of the Methanogenic Degradation of VFAs	344
14.5.1.1	Process of Anaerobic Digestion in an Electrochemical System	344
14.5.1.2	Conversion of Propionate and Acetate	346
14.5.1.3	Conversion of Butyrate and Acetate	347
14.5.1.4	Conversion of Formate and Acetate	348
14.5.1.5	Conversion of Valerate	349
14.5.1.6	Conversion of Mixed-VFAs vs. Individual VFA	350
14.5.2	DIET Process During the Methanogenesis	350
14.6	Overview of Application	352
14.7	Direct Electron Transfer in Methane Oxidation	353
14.8	Challenges	353
14.8.1	Electron Transfer Across the Bridge Between Electrode and Cell	353
14.8.2	Mechanism of Cytoplasmic Reactions	354
14.9	Conclusion	354
	Acknowledgment	354
	References	355

15 Microbial Metabolism Kinetics and Interactions in Bioelectrosynthesis System

Zechong Guo and Chunxue Yang

15.1	Introduction	363
15.2	Microbial Metabolism Kinetics of Anode	366
15.2.1	Dynamic Description of Anodic Processes	366
15.2.2	Influencing Factors for Anodic Kinetics	371
15.2.3	Anode Potential Losses	372
15.3	Electrosynthesis Kinetics of Cathode	374
15.3.1	Dynamic Description of Cathode Electrosynthesis Processes	374
15.3.2	Cathode Potential Losses	376
15.4	Energy Balance in Bioelectrosynthesis Systems	378
15.4.1	Energy Transfer and Dissipation	378
15.4.2	Electron Balance in Electronic Circuit	380
15.4.3	Energy Recovery Efficiency Evaluation	383
15.5	Microbial Community Growth on Electrode	384
15.5.1	Anode Biofilm Formation Determined by Anode Potentials	384
15.5.2	Anodic Biofilm Structure	386
15.5.3	Interaction of Functional Communities in Integrated System of Bioelectrochemistry and Anaerobic Digestion	388
	References	391
