

Index

a

acrylic acid 274–278
 catalytic reaction 276–278
 acyl–aryl bonds 114, 115
 acyl C–C bonds 113
 additives 165, 190, 203, 287,
 312
 aldehydes 13–25
 nickel-catalyzed asymmetric
 alkylative coupling 43–44
 nickel-catalyzed asymmetric
 reductive coupling 40–43
 aldehydes transformation
 five-membered oxanickelacycle
 complexes 18–22
 seven-membered oxanickelacycle
 complexes 22–23
 three-membered oxanickelacycle
 complexes 14–17
 alkenes, nickel-catalyzed asymmetric
 alkylative coupling 43–44
 alkylative coupling 40, 43–45
 alkyl bromides 77, 95, 158–160, 165,
 168, 171, 190, 195, 204,
 309–312
 alkylsilicates
 Csp³–Csp² cross-couplings with
 alkylhalides 165–166
 Csp³–Csp² cross-couplings with
 (hetero)aryl/vinyl halides or
 tosylates 160–164
 Csp³–Csp² cross-couplings with
 isocyanates 165
 alkynes, nickel-catalyzed asymmetric
 reductive coupling 40–43

alkyne terminus 103
 α,β -unsaturated carbonyls (enons) 50,
 52, 53
 α,β -unsaturated ester synthesis
 electrochemical reactions 269–270
 reduction with organometallic
 reagents 270–271
 anhydrides, cross-couplings of
 159–160
 arenols 136–137
 aromatic carbon-halogen [C(aryl)–X]
 bonds 123
 aryl ethers 132–136
 aryl ketones 160, 202
 aryl triflates 190, 201, 203
 aryl trifluoromethane sulfonates
 (triflates) 123
 aza-aluminacyclopentenes 36
 aza-nickelacycles 6, 29
 aza-nickelacycle **3aa** 34
 aza-Pauson–Khand reaction 8, 29
 aziridines 193, 194

b

benzyl electrophiles 198, 290, 304–306
 benzyl esters and carbamates 138–140
 benzylic dimerization 196
 benzylnickel intermediate 139
 β -carbon 103, 104, 107, 108, 110, 113,
 114
 biphenylene 110
 bond dissociation energy (BDE) 125,
 169
 borylated product 139

C

C(acyl)—O bond cleavage 141–144
 carbon dioxide (CO₂) 251–279
 C1 building block 251–252
 chemical transformation 251
 carbon–heteroatom bonds 129, 142,
 153, 154, 223
 carbonylation reaction 6
 [2+2+1]carbonylative cycloaddition
 reaction 29–31
 carboxylation reactions 285–319
 C(aryl)—O bond cleavage 124–137
 activation 124
 arenols 136–137
 aryl esters 124–131
 aryl ethers 132–136
 carbamates and carbonates 124–131
 phenols 124
 C(benzyl)—O bond cleavage 138–141
 benzyl esters carbamates 138–140
 benzyl ethers 140–141
 C—C bond functionalization 103–117
 4- and 5-membered rings 110–113
 less strained molecules 113–114
 oxidative addition 103
 3-membered rings 103–109
 C—C bond functionalization &
 β-carbon elimination 103
 C—CN bond functionalization
 115–116
 chiral cyclic carbonate 139
 C—O bond transformations 123–144
 cross-electrophile coupling 183
 of acyl halides 202
 acyl-X with alkyl-X 199–201
 advantages 183
 arX and allyl-X 196–197
 of ArX and Bn-X 195–196
 aryl-X and alkyl-X 188–195
 central challenge 183
 C(sp²)—C(sp³) bond formation
 188
 mechanistic hypotheses 185–201
 multicomponent reactions 206–207
 organic synthesis 185
 vinyl-X with R-X 197–199
 C(sp)—C(sp³) coupling 205–206

C(sp²)—C(sp²) coupling
 Aryl-X+Acyl-X 202–203
 Aryl-X/Vinyl-X + Aryl-X/Vinyl-X
 201–202
 C(sp³)—C(sp³) coupling 203–205
 Csp³—Csp³ cross-couplings with
 alkylhalides 158–159
 Csp³—Csp² cross-couplings with
 (hetero)aryl/vinyl halides
 157–158
 cyclobutanones 110–112
 cyclopropyl ketones 63, 104–106
 cyclopropylmethylnickel 139

d

de-hydroxylation 137
 diene with CO₂ 256, 257, 271, 274
 1,2-dihydropyridine derivatives
 formation 31–34
 1,4-dihydropyridines 166–167
 directing groups (DGs) 71–93, 141

e

8-membered nickelacycle intermediate
 104
 electrochemical process 187, 270, 272
 electron-rich transition metal 13
 epoxides 193, 292
 η²-aldehyde ligands 13
 (η⁴-cyclopentadienone)iron complex
 3, 4
 ethyl cycloheptylideneacetate 107
 ethyl cyclopropylideneacetate
 107–109

f

five-membered aza-nickelacycle
 29–31, 33, 34
 five-membered nickelacycle complexes
 14
 five-membered oxanickelacycle
 complexes 14, 18–22, 24

h

hetero nickelacycles 3–9, 63
 high-valent Ni complexes

- additional Ni^{III} complexes 239–241
 additional Ni^{IV} complexes 241–243
¹H NMR spectroscopy 30
- i**
- imines transformation 29–37
 three-component coupling and
 cyclocondensation reactions
 34–37
- k**
- keto acids, cross-coupling of 159–160
 ketones 45–47, 103, 116, 128, 170, 206,
 207
- l**
- lactams 3, 4, 6
 Lewis acidic metals 13, 14
- m**
- meso-anhydrides 203
 metalacyclopentadiene 3
 methoxyarene substrates 132
 methyleneaziridines 108, 109
 methylenecyclopropanes 105, 107
 methylzincamido 34
 modern cross-coupling methods 183
 monometallic oxidative addition 290
- n**
- naphthol derivatives 136, 137
N-(benzenesulfonyl)benzaldimine 29,
 30
 Ni-catalytic carboxylation reactions
 carbon dioxide 285
 electrocarboxylation 291–294
 bipyridine and related α -diimine
 ligands 296–297
 phosphine ligands 294–295
 salen ligands 297–298
 mechanistic building blocks
 287–290
 additives 287
 carbon dioxide coordination
 287–288
 insertion/C—C bond formation
 288–289
 ligand effects 289–290
 oxidation state 290
 oxidative addition 290
 single electron transfer 290
 non-electrochemical methods 298
 allyl electrophiles carboxylation
 312–315
 aryl halides 300–303
 benzyl electrophiles 304–306
 unactivated alkyl electrophiles
 carboxylation 306–312
 unsaturated systems 315–318
 Ni-catalyzed chelation-assisted direct
 functionalization
 bidentate directing groups 71–72,
 88
 alkenylation 83–85
 alkylation 76–83
 alkynylation 85–88
 arylation 72–76
 C–chalcogen bond formation
 89–92
 C–halogen bond formation
 92–93
 C–N bond formation 89
 monodentate directing groups
 94–95
 alkenylation 95–96
 alkylation 94–95
 alkynylation 96–97
 C–chalcogen bond formation
 97–98
 nickelacycles 9, 39, 108
 nickelalactone
 formation and characterization
 reaction with alkene 252–255
 reaction with alkyne 257–260
 reaction with allene 255–256
 reaction with diene 256–257
 generation 261
 reactivity
 β -hydride elimination 263–264
 intermediate 264
 ligand exchange 267–268
 nucleophilic attack 265–267
 oxidation 267
 retro-cyclization 265

- nickelalactone (*contd.*)
 transmetallation with
 organometallic reagent
 261–263
- nickel catalysis 24, 39, 66, 103, 105,
 107, 109–111, 113, 115, 116, 139,
 154, 157, 161, 170, 194
- nickel-catalyzed asymmetric alkylative
 coupling of enones and alkynes
 50–51
- nickel-catalyzed asymmetric
 annulations, of pyridones via
 hydroarylation to alkenes
 64–65
- nickel-catalyzed asymmetric coupling
 of alkenes, aldehydes, and silanes
 59–61
- of alkynes and aldehydes 39–40
- of alkynes and
 cyclopropylcarboxamide 63–64
- of alkynes and imine 44–45
- of allenes, aldehydes, and silanes
 57–58
- of allenes and isocyanates 58–59
- of arylenoates and alkynes 55–56
- of 1, 3-dienes and aldehydes 47–49
- of diynes with ketenes 56
- of enones and alkynes 50–54
- of 1, 3-enynes and aldehydes 45–46
- of 1, 3-enynes and ketones 46–47
- of formamide and alkene 61–63
- nickel-catalyzed asymmetric synthesis
 55
- of benzoxasilole 65–66
- nickel-catalyzed hetero-Pauson–Kahnd
 reaction 6
- nickel-catalyzed hydrogenolysis 137
- nickel-catalyzed Pauson–Khand
 reaction 8
- nickel-catalyzed reductive coupling
 reaction 37, 42
- nickel-catalyzed transformation
 reactions 29
- non-fluorinated phenol derivatives
 123
- norbornadiene 112, 113
- N*-sulfonyl group 37
- nucleophiles 13, 124, 127, 141, 153,
 183, 186, 236
- o**
- organoboron reagents 17, 34, 126, 127,
 137, 138
- organometallic Ni^(III) complexes
 223–234
- organometallic Ni^(IV) complexes
 234–239
- organotrifluoroborates
 Csp³-Csp² cross-couplings with
 carboxylic acids derivatives 156
- Csp³-Csp² cross-couplings with
 (hetero)aryl/vinyl halides
 154–156
- oxalates, cross-coupling of 159–160
- oxanickelacycle complexes 14, 18
- oxanickelacyclopentene 110
- oxidative cyclization 3–6, 14, 29, 31,
 34, 36, 39, 45, 49, 51, 53–55, 58,
 252–261
- p**
- Pauson–Kahnd-type reaction 3, 4
- phenol derivatives 123, 124, 127, 129,
 136, 164
- phenyl formate 6, 30
- phosphine ligands 42, 51, 75, 258, 292,
 294–295, 300
- photoredox catalysis 153, 165, 318
- photoredox/nickel dual catalysis
 carbon–carbon bonds 154
- from alkyl bromides 168
- from alkylsilicates 160–166
- from alkylsulfonates 168
- carboxylates/keto acids/from
 methylanilines 157–160
- from 1,4-dihydropyridines
 166–167
- organotrifluoroborates 154–156
- from Sp³ CH bonds 169–170
- from xanthates 169
- carbon–heteroatom bonds
- C–O bond formation 170–171
- C–P bond formation 171
- C–S bond formation 171–173

- energy transfer-mediated nickel catalysis 173–175
 - pyridine carboxamidines (PyCam) 190
 - pyrone synthesis 269
 - diynes with CO₂ reaction 268–269
 - initial finding 268
- r**
- reductant use 272–274
 - Reisman group 196, 198, 201
- s**
- seven-membered oxanickelacycle complexes 14, 22–23
 - single electron transfer (SET) 80, 153, 154, 188, 290, 315
 - Sp³ C—H bonds 169–170
 - stoichiometric reaction 3–9, 32, 34, 35, 53, 54, 127, 192, 270, 271, 300, 309, 312
- Suzuki–Miyaura type reaction 127, 134, 142
- t**
- 1,2,3,5-tetrakis-(carbazole-yl)-4-dicyanobenzene (4CzIPN) 162, 163, 273
 - tetrakis(dimethylamino) ethylene (TDAE) 194
 - three-membered oxa-metallacycle complexes 13–17
 - three-membered oxanickelacycle complexes 14–17
 - Tishchenko reaction 21, 22
 - Tolman's electronic parameter (TEP) 4
- v**
- vinylcyclopropanes 103–105, 107
