	Preface	<i>xiii</i>
1	Buckling-Induced Origami Assembly of 3D Micro/Nanostructures: Designs, Materials, and Applications	1
	<i>Xu Cheng and Yihui Zhang</i>	
1.1	Introduction	1
1.2	Buckling-Induced Folding Assembly	3
1.2.1	Nonuniform Thickness Strategy	3
1.2.2	Plasticity Strategy	4
1.2.3	Loading Path Strategy	6
1.3	Buckling-Induced Bending/Twisting Assembly	7
1.3.1	Deformation Mode Ratio	7
1.3.2	Kirigami Design Strategy	7
1.3.3	Multilayer Design Strategy	9
1.3.4	Engineered Substrate Strategies	10
1.4	Functional Materials Integrated with 3D Mesostructures	11
1.4.1	Metallic Conductors	11
1.4.2	Semiconductors	11
1.4.3	Piezoelectric Materials	12
1.4.4	2D Materials	13
1.4.5	Phase-Change Materials	13
1.4.6	Transfer Printing of 3D Mesostructures	14
1.5	Applications	14
1.5.1	Electronics	14
1.5.2	Robotics	16
1.5.3	Sensors	17
1.5.4	Biomedical Devices	17
1.5.5	Energy Harvesters	18
1.5.6	Optical Devices	18
1.6	Concluding Remarks	20
	Acknowledgments	20
	References	20

2	Design and Realization of Transient Electronics Enabled by Nanomembranes	27
	<i>Chunyu You, Bofan Hu, Ziyu Zhang, Borui Xu, Gaoshan Huang, and Yongfeng Mei</i>	
2.1	Introduction	27
2.2	Material Selection for Transient Electronics	29
2.2.1	Conductors	29
2.2.2	Semiconductors	31
2.2.3	Dielectrics	33
2.3	Fabrication Process for Nanomembrane Transient Devices	35
2.3.1	Solution-Based Processes	35
2.3.2	Transfer-Printing Method	36
2.3.3	Back-Thinning Method	37
2.4	Self-Destruction Mechanisms for Nanomembrane Devices	40
2.4.1	Passive Dissolving Without Triggering	40
2.4.2	Thermally Triggered Devices	41
2.4.3	Optically Triggered Devices	46
2.4.4	Electrically Triggered Devices	46
2.5	Conclusion and Outlook	48
	References	49
3	Diverse Polymer Nanomembranes Toward Task-Specific Applications	57
	<i>Hong Zhu, Feifei Wu, Jizhai Cui, Borui Xu, and Yongfeng Mei</i>	
3.1	Introduction	57
3.2	Fabrication and Functionalization of Polymer Nanomembranes	58
3.2.1	Spin Coating and Dip Coating	58
3.2.2	Layer-by-Layer (LbL) Assembly and Langmuir–Blodgett (LB) Films	60
3.2.3	Chemical Vapor Deposition	61
3.2.4	Interfacial Polymerization	62
3.2.5	Release of Polymer Nanomembrane	63
3.2.6	Incorporation of Nanomaterials	63
3.2.7	Metal/Polymer Nanomembranes	64
3.3	Properties of Polymer Nanomembranes	65
3.3.1	Mechanical Properties	65
3.3.2	Permeability	67
3.3.3	Stability	67
3.3.4	Stimuli-Responsive Properties	68
3.4	Applications of Polymer Nanomembrane	69
3.4.1	Gas Purification	69
3.4.2	Wastewater Treatment and Water Desalination	72
3.4.3	Polymer Electrolyte Nanomembrane	74
3.4.4	Actuators and Microrobots	76
3.5	Conclusion and Prospect	78
	References	78

4	Inorganic Flexible Electronics: Materials, Strategies, and Applications	85
	<i>Guo Qinglei and Di Zengfeng</i>	
4.1	Introduction	85
4.2	Strategies for Designing Flexible Electronics	86
4.3	Strategies for Forming and Assembling Inorganic Nanomaterials	88
4.4	Applications of Inorganic Flexible Electronics	90
4.4.1	Flexible Photo-Imaging or Sensing Systems	90
4.4.2	Epidermal Electronics	93
4.4.3	Bioimplantable Electronics	95
4.5	Conclusion	98
	Acknowledgments	98
	References	99
5	Magnetic Nanomembranes	105
	<i>Guanghui Yan, Yi Ouyang, Anni Li, Yongfeng Mei, and Jizhai Cui</i>	
5.1	Basic Theory of Magnetic Nanomembranes	105
5.1.1	Overview	105
5.1.2	Magnetic Materials in Nanomembranes	106
5.1.2.1	Types of Magnetic Materials	106
5.1.2.2	Fabrication of Magnetic Nanomembranes	107
5.1.3	Magnetic Anisotropy in Nanomembranes	108
5.1.3.1	Magnetocrystalline Anisotropy	108
5.1.3.2	Shape Anisotropy	109
5.1.3.3	Interface Anisotropy	110
5.1.3.4	Exchange-Coupled Anisotropy	110
5.1.3.5	Stress-Induced Anisotropy	111
5.1.4	Magnetoelectronic Properties in Magnetic Nanomembranes	112
5.1.4.1	Anisotropic Magnetoresistance (AMR) Effect	112
5.1.4.2	Giant Magnetoresistance (GMR) Effect	113
5.1.4.3	Tunneling Magnetoresistance (TMR) Effect	116
5.1.4.4	Giant Magnetoimpedance (GMI) Effect	117
5.1.4.5	Planar Hall Effect (PHE)	119
5.1.5	Magnetic Torque and Force	119
5.1.6	Curie Temperature/Metamagnetism	120
5.2	Applications of Magnetic Nanomembranes	120
5.2.1	Overview	120
5.2.2	Magnetic Sensorics	121
5.2.2.1	Detection of Magnetic Field Strength	121
5.2.2.2	Acquisition of Motion and Displacement	123
5.2.3	Magnetic Microbot	124
5.2.3.1	Helical Microbot	126
5.2.3.2	Tubular Microbots	128
5.2.3.3	Reconfigurable Micromachines	130
5.2.4	Other Functionalities	133

6	Mechanics of Spontaneous Deformation in Nanomembranes: Theory, Simulations, and Experiments	143
	<i>Haning Xiu, Guangchao Wan, Ziao Tian, Shicheng Huang, Gaoshan Huang, Ian Trase, Yongfeng Mei, and Zi Chen</i>	
6.1	Introduction	143
6.2	Linear Elasticity Theory	145
6.2.1	Stresses and Strains	145
6.2.2	Linearized Kirchhoff Theory for Thin Beams	146
6.2.3	Föppl–von Kármán Plate Theory	147
6.2.4	Continuum Elasticity Theory for Helicity of Ribbons	150
6.2.4.1	Derivation of the Helix Centerline Coordinates	151
6.3	Bistability of Thin Structures: Bistable and Reconfigurable Nanomembrane	153
6.3.1	Experiments	153
6.3.2	Assembly of Bistable Nanomembranes into Mesostructures	157
6.4	Wrinkling, Rolling, and Twisting of Micro-/Nanostructures	159
6.4.1	Wrinkling in Thin Flexible Layers and Nanomembrane	159
6.4.2	Mechanical Self-Assembly of Helical Ribbons	163
6.4.3	Shape Instability and Transitions in Helical Ribbons	166
6.4.4	Mechanical Self-Assembly of Rolled-Up Tubes	169
6.4.5	Chiral Nanoarchitectonics	172
6.5	Multistability of Multilayer Structures	175
6.5.1	Tristability of Bilayer Composite	175
6.5.1.1	Theoretical Representation of the Partially Bonded Strip	175
6.5.1.2	Numerical Simulation of the Partially Bonded Strip	176
6.5.2	Bistable and Neutral Stable Shells	177
6.5.3	Multistability in Bioinspired Structures	180
6.6	Conclusion	182
	Acknowledgments	182
