Preface *xiii*

- 1 Introduction to Early Main Group Organometallic Chemistry and Catalysis 1**
Sjoerd Harder
- 1.1 Introduction 1
- 1.2 s-Block Organometallics 1
- 1.2.1 Short History 1
- 1.2.2 Synthesis of Group 1 Organometallics 2
- 1.2.3 Synthesis of Group 2 Organometallics 4
- 1.2.4 Bonding and Structures of s-Block Organometallics 8
- 1.2.5 Dynamics of s-Block Organometallics in Solution 13
- 1.2.6 Low-Valent s-Block Chemistry 16
- 1.3 s-Block Organometallics in Catalysis 17
- 1.3.1 Working Principles in Lewis Acid Catalysis 17
- 1.3.2 Working Principles in s-Block Organometallic Catalysis 19
- 1.3.3 Substrate Activation by s-Block Metals 21
- 1.3.4 Future of Early Main Group Metal Catalysis 23
- List of Abbreviations 24
- References 24
- 2 Polymerization of Alkenes and Polar Monomers by Early Main Group Metal Complexes 31**
Sjoerd Harder
- 2.1 Introduction 31
- 2.2 Alkene Polymerization 32
- 2.2.1 Styrene Polymerization 33
- 2.2.2 Polymerization of Modified Styrene 40
- 2.2.3 Polymerization of Butadiene or Isoprene 43
- 2.3 Polymerization of Polar Monomers 45
- 2.3.1 Polymerization of Lactides 45
- 2.3.2 Copolymerization of Epoxides and CO₂ 50
- 2.4 Conclusions 53
- List of Abbreviations 54
- References 54

3	Intramolecular Hydroamination of Alkenes	59
	<i>Sebastian Bestgen and Peter W. Roesky</i>	
3.1	Introduction	59
3.2	Hydroamination	60
3.2.1	Scope	62
3.3	s-Block Metal Catalysis	64
3.3.1	General Remarks	64
3.3.2	Mechanistic Aspects	65
3.3.3	Group 1-Based Catalysis	68
3.3.3.1	Concerted Reaction	68
3.3.3.2	Radical-Mediated Intramolecular Hydroamination	71
3.3.3.3	Reactions of <i>N</i> -Arylhydrazones and Ketoximes	72
3.3.4	Group 2 Metal-Mediated Catalysis	74
3.3.5	Group 2-Mediated Asymmetric Cyclohydroamination	83
3.3.6	Lewis Acidic Metal Cation Catalysis	84
3.3.7	Miscellaneous	85
3.4	Outlook	86
	Acknowledgments	87
	List of Abbreviations	87
	References	88
4	Molecular s-Block Catalysts for Alkene Hydrophosphination and Related Reactions	93
	<i>Yann Sarazin and Jean-François Carpentier</i>	
4.1	Introduction	93
4.2	General Considerations	95
4.3	Hydrophosphination of Alkenes	96
4.3.1	Precatalysts with Nitrogen-Based Ligands	97
4.3.2	Precatalysts with Oxygen-Based Ligands	110
4.4	Hydrophosphination of Carbodiimides	112
4.5	Miscellaneous Reactions	114
4.5.1	Hydrophosphinylation of Alkenes and Enones	114
4.5.2	Hydrophosphonylation of Aldehydes and Ketones	116
4.6	Summary and Conclusions	117
	List of Abbreviations	118
	References	118
5	H—N and H—P Bond Addition to Alkynes and Heterocumulenes	123
	<i>Sven Krieck and Matthias Westerhausen</i>	
5.1	Introduction	123
5.2	Hydroamination	124
5.2.1	Hydroamination with Secondary Amines	125
5.2.2	Hydroamination with Primary Amines	128

5.2.3	Proposed Mechanisms for the Hydroamination of Butadiynes	130
5.3	Hydrophosphanylation (Hydrophosphination)	134
5.4	Hydrophosphorylation and Hydrophosponylation	138
5.5	Summary and Conclusions	143
5.6	Acknowledgments	146
5.7	Abbreviations	146
	References	146
6	Early Main Group Metal-Catalyzed Hydrosilylation of Unsaturated Bonds	151
	<i>Sjoerd Harder</i>	
6.1	Introduction	151
6.2	Historical Development	151
6.3	Nonprecious Metal Hydrosilylation Catalysts	153
6.4	C=C Bond Hydrosilylation with s-Block Metal Catalysts	155
6.5	C=O Bond Hydrosilylation with s-Block Metal Catalysts	161
6.6	C=N Bond Hydrosilylation with s-Block Metal Catalysts	167
6.7	Conclusions	170
	References	171
7	Early Main Group Metal Catalyzed Hydrogenation	175
	<i>Heiko Bauer and Sjoerd Harder</i>	
7.1	Introduction	175
7.2	Hydrogenation of C=C Double Bonds	178
7.3	Hydrogenation of C=N Double Bonds	187
7.4	Hydrogenation of C=O Double Bonds	191
7.5	Summary and Perspectives	194
	References	197
8	Alkali and Alkaline Earth Element-Catalyzed Hydroboration Reactions	201
	<i>Aaron D. Sadow</i>	
8.1	Introduction and Overview	201
8.2	Thermodynamic Considerations	203
8.2.1	Hydroboration, Hydrosilylation, and Hydrogenation	203
8.2.2	Thermochemistry of Metal–Oxygen Bonds and Element–Hydrogen Bonds	205
8.3	Group 1-Catalyzed Hydroboration Reactions	207
8.3.1	Overview	207
8.3.2	Base-Catalyzed Hydroborations	207
8.3.3	Alkali Metal Hydridoborate and Aluminate-Catalyzed Hydroboration	210
8.4	Group 2-Catalyzed Hydroboration Reactions	214
8.4.1	Overview	214
8.4.2	β -Diketiminato Magnesium-Catalyzed Hydroborations	215
8.4.3	Tris(4,4-dimethyl-2-oxazolanyl)phenylborato Magnesium-Catalyzed Hydroboration of Ester and Amides	217

8.4.4	Magnesium Triphenylborate-Catalyzed Hydroboration	221
8.4.5	Supported Catalysts for Hydroboration	221
8.5	Summary and Conclusions	222
	References	222
9	Dehydrocoupling and Other Cross-couplings	225
	<i>Merle Arrowsmith</i>	
9.1	Introduction	225
9.2	Early Main Group-Catalyzed Cross-DHC of Amines and Boranes	228
9.2.1	Early Stoichiometric Studies with s-Block Elements	228
9.2.2	s-Block-Catalyzed Cross-dehydrogenative Synthesis of Diaminoboranes	229
9.2.3	s-Block-Catalyzed DHC of DMAB	231
9.2.4	Calcium-Catalyzed Dehydrocoupling of <i>tert</i> -Butylamine Borane	235
9.2.5	s-Block-Catalyzed DHC of Amines and Monohydroboranes	235
9.3	s-Block-Catalyzed Cross-DHC of Amines and Silanes	238
9.3.1	Influence of Precatalysts and Substrates on Reactivity and Selectivity	238
9.3.2	Mechanistic and Computational Analysis	240
9.3.3	Application to the Synthesis of Oligo- and Polysilazanes	242
9.4	Other s-Block-Catalyzed Cross-DHC Reactions	243
9.4.1	Alkali Metal-Catalyzed DHC of Si—H and O—H Bonds	243
9.4.2	s-Block-Catalyzed DHC of Si—H and C—H Bonds	243
9.5	Early Main Group-Mediated Nondehydrogenative Cross-couplings	244
9.6	Conclusion and Outlook	245
	References	246
10	Enantioselective Catalysis with s-Block Organometallics	251
	<i>Philipp Stegner and Sjoerd Harder</i>	
10.1	Introduction	251
10.2	Lithium-Based Catalysts	252
10.2.1	Lithium Catalysts Based on Neutral Chiral Ligands	252
10.2.2	Lithium Catalysts Based on Monoanionic Chiral Ligands	255
10.2.3	Lithium Catalysts Based on Dianionic Chiral Ligands	257
10.3	Potassium-Based Catalysts	259
10.3.1	Potassium Catalysts Based on Monoanionic Chiral Ligands	260
10.4	Magnesium-Based Catalysts	262
10.4.1	Magnesium Catalysts Based on Monoanionic Chiral Ligands	263
10.4.2	Magnesium Catalysts Based on Dianionic Chiral Ligands	266
10.5	Calcium-Based Catalysts	269
10.5.1	Calcium Catalysts Based on Monoanionic Chiral Ligands	269
10.5.2	Calcium Catalysts Based on Dianionic Chiral Ligands	273
10.6	Conclusion and Outlook	275
	List of Abbreviations	275
	References	276

- 11 Early Main Group Metal Lewis Acid Catalysis 279**
Marian Rauser, Sebastian Schröder, and Meike Niggemann
- 11.1 Introduction 279
 - 11.1.1 Lewis Acidity of s-Block Metal Cations 280
 - 11.1.2 Interactions with More than One Lewis Base 281
 - 11.1.3 Counter Anions 282
 - 11.1.4 Solvation 283
 - 11.1.5 Solubility and Aggregation 283
 - 11.1.6 Water Tolerance 284
 - 11.1.7 Relative Lewis Acid Activity of Alkaline and Alkaline Earth Metals 285
 - 11.1.8 Hidden Brønsted Acid 287
 - 11.2 Polarized Carbon–Heteroatom Double Bonds 287
 - 11.2.1 Carboxylates: Anhydrides and Carbonates 288
 - 11.2.2 Aldehydes, Ketones, and Formates 289
 - 11.2.3 α,β -Unsaturated Carbonyl Compounds 291
 - 11.2.4 Imines and Enamines 292
 - 11.2.5 Mannich Reactions 294
 - 11.2.6 Oxidation and Reduction 294
 - 11.2.7 Donor–Acceptor Cyclopropanes 294
 - 11.2.8 Diels–Alder Reaction and Cycloaddition 295
 - 11.3 Activation of Polarized Single Bonds 296
 - 11.3.1 Opening of Three-Membered Heterocycles 296
 - 11.3.2 Leaving Groups 297
 - 11.3.3 Ca^{2+} -Catalyzed Dehydroxylation as a Special Case 299
 - 11.4 Activation of Unpolarized Double Bonds 305
 - 11.5 Summary and Conclusions 307
 - References 307
- 12 Enantioselective Group 2 Metal Lewis Acid Catalysis 311**
Yasuhiro Yamashita, Tetsu Tsubogo, and Shū Kobayashi
- 12.1 Introduction 311
 - 12.2 Catalytic Enantioselective Reactions Using Chiral Magnesium Complexes 313
 - 12.2.1 Chiral Magnesium-Catalyzed Diels–Alder and 1,3-Dipolar Cycloaddition Reactions 313
 - 12.2.2 Chiral Magnesium-Catalyzed 1,4-Addition Reactions 315
 - 12.2.3 Chiral Magnesium-Catalyzed Addition Reactions to Carbonyl Compounds 318
 - 12.2.4 Chiral Magnesium-Catalyzed Addition Reactions with Imines 319
 - 12.2.5 Chiral Magnesium-Catalyzed Ring-Opening Reactions of Epoxide and Aziridine 321
 - 12.2.6 Chiral Magnesium-Catalyzed α -Functionalization Reactions of Carbonyl Compounds 323
 - 12.2.7 Various Chiral Magnesium-Catalyzed Reactions 324
 - 12.3 Catalytic Enantioselective Reactions Using Chiral Calcium Complexes 324

12.3.1	Chiral Calcium-Catalyzed Addition Reactions to Carbonyl Compounds	324
12.3.2	Chiral Calcium-Catalyzed 1,4-Addition Reactions	326
12.3.3	Chiral Calcium-Catalyzed Addition Reactions with Imines	331
12.3.4	Chiral Calcium-Catalyzed α -Functionalization Reactions with Carbonyl Compounds	333
12.3.5	Chiral Calcium-Catalyzed Cycloaddition Reactions	334
12.3.6	Chiral Calcium-Catalyzed Hydroamination Reactions	334
12.3.7	Chiral Calcium-Catalyzed Epoxidation Reactions	336
12.3.8	Chiral Calcium-Catalyzed Aziridine Ring-Opening Reaction	337
12.4	Catalytic Enantioselective Reactions Using Chiral Strontium Complexes	337
12.4.1	Chiral Strontium-Catalyzed 1,4-Addition Reactions	337
12.4.2	Chiral Strontium-Catalyzed Addition Reactions with Imines	338
12.4.3	Chiral Strontium-Catalyzed Oxime Formation	339
12.5	Catalytic Enantioselective Reactions Using Chiral Barium Complexes	339
12.5.1	Chiral Barium-Catalyzed Addition Reactions to Carbonyl Compounds and Imines	339
12.5.2	Chiral Barium-Catalyzed 1,4-Addition Reactions	340
12.5.3	Chiral Barium-Catalyzed Diels–Alder Reactions	341
12.6	Summary and Outlook	341
	References	342
13	Miscellaneous Reactions	347
	<i>Michael S. Hill</i>	
13.1	Introduction	347
13.2	Privileged Substrates and s-Block Reactivity	347
13.3	Reactivity with Multiply Bonded Substrates	351
13.3.1	Tishchenko Dimerization of Aldehydes	351
13.3.2	Trimerization of Organic Isocyanates	352
13.3.3	Hydroalkoxylation of Alkynyl Alcohols	353
13.3.4	Catalytic Isomerization and C–C Coupling with Terminal Alkynes	354
13.3.5	Activation and Deoxygenation of C–O Multiple Bonds	358
13.4	Single-Electron Transfer Steps in s-Block-Centered Catalysis	361
13.5	“Beyond” Hydrofunctionalization and Dehydrocoupling	363
13.6	Conclusions and Conjecture	365
	References	367
