Preface *xiii*

1	Upgrading of Biomass via Catalytic Fast Pyrolysis (CFP)	1
	<i>Charles A. Mullen</i>	
1.1	Introduction	1
1.1.1	Catalytic Pyrolysis Over Zeolites	4
1.1.1.1	Catalytic Pyrolysis Over HZSM-5	4
1.1.1.2	Deactivation of HZSM-5 During CFP	9
1.1.1.3	Modification of ZSM-5 with Metals	13
1.1.1.4	Modifications of ZSM-5 Pore Structure	18
1.1.2	CFP with Metal Oxide Catalysts	20
1.1.3	CFP to Produce Fine Chemicals	24
1.1.4	Outlook and Conclusions	26
	References	27
2	The Upgrading of Bio-Oil via Hydrodeoxygenation	35
	<i>Adetoyese O. Oyedun, Madhumita Patel, Mayank Kumar, and Amit Kumar</i>	
2.1	Introduction	35
2.2	Hydrodeoxygenation (HDO)	37
2.2.1	Hydrodeoxygenation of Phenol as a Model Compound	38
2.2.1.1	HDO of Phenolic (Guaiacol) Model Compounds	38
2.2.1.2	HDO of Phenolic (Anisole) Model Compounds	40
2.2.1.3	HDO of Phenolic (Cresol) Model Compounds	40
2.2.2	Hydrodeoxygenation of Aldehyde Model Compounds	41
2.2.3	Hydrodeoxygenation of Carboxylic Acid Model Compounds	43
2.2.4	Hydrodeoxygenation of Alcohol Model Compounds	44
2.2.5	Hydrodeoxygenation of Carbohydrate Model Compounds	44
2.3	Chemical Catalysts for the HDO Reaction	45
2.3.1	Catalyst Promoters for HDO	48
2.3.2	Catalyst Supports for HDO	49
2.3.3	Catalyst Selectivity for HDO	49
2.3.4	Catalyst Deactivation During HDO	50
2.4	Research Gaps	51
2.5	Conclusions	52
	Acknowledgments	52
	References	53

3	Upgrading of Bio-oil via Fluid Catalytic Cracking	61
	<i>Idoia Hita, Jose Maria Arandes, and Javier Bilbao</i>	
3.1	Introduction	61
3.2	Bio-oil	63
3.2.1	Bio-oil Production via Fast Pyrolysis	63
3.2.2	General Characteristics, Composition, and Stabilization of Bio-oil	63
3.2.2.1	Adjustment of Bio-oil Composition Through Pyrolytic Strategies	65
3.2.2.2	Bio-oil Stabilization	66
3.2.3	Valorization Routes for Bio-oil	69
3.2.3.1	Hydroprocessing	69
3.2.3.2	Steam Reforming	70
3.2.3.3	Extraction of Valuable Components from Bio-oil	71
3.3	Catalytic Cracking of Bio-oil: Fundamental Aspects	71
3.3.1	The FCC Unit	71
3.3.2	Cracking Reactions and Mechanisms	73
3.3.3	Cracking of Oxygenated Compounds	74
3.3.4	Cracking of Bio-oil	76
3.4	Bio-oil Cracking in the FCC Unit	78
3.4.1	Cracking of Model Oxygenates	78
3.4.2	Coprocessing of Oxygenates and Their Mixtures with Vacuum Gas Oil (VGO)	78
3.4.3	Cracking of Bio-oil and Its Mixtures with VGO	79
3.5	Conclusions and Critical Discussion	86
	References	88
4	Stabilization of Bio-oil via Esterification	97
	<i>Xun Hu</i>	
4.1	Introduction	97
4.2	Reactions of the Main Components of Bio-Oil Under Esterification Conditions	102
4.2.1	Sugars	102
4.2.2	Carboxylic Acids	109
4.2.3	Furans	113
4.2.4	Aldehydes and Ketones	114
4.2.5	Phenolics	116
4.2.6	Other Components	117
4.3	Processes for Esterification of Bio-oil	121
4.3.1	Esterification of Bio-oil Under Subcritical or Supercritical Conditions	121
4.3.2	Removal of the Water in Bio-oil to Enhance Conversion of Carboxylic Acids	121
4.3.3	In-line Esterification of Bio-oil	123
4.3.4	Esterification Coupled with Oxidation	123
4.3.5	Esterification Coupled with Hydrogenation	123
4.3.6	Steric Hindrance in Bio-oil Esterification	124
4.3.7	Coking in Esterification of Bio-oil	125

- 4.3.8 Effects of Bio-oil Esterification on the Subsequent Hydrotreatment 129
- 4.4 Catalysts 132
- 4.5 Summary and Outlook 136
- Acknowledgments 137
- References 137

- 5 Catalytic Upgrading of Holocellulose-Derived C₅ and C₆ Sugars 145**
Xingguang Zhang, Zhijun Tai, Amin Osatiashtiani, Lee Durndell, Adam F. Lee, and Karen Wilson
- 5.1 Introduction 145
- 5.2 Catalytic Transformation of C₅–C₆ Sugars 146
- 5.2.1 Isomerization Catalysts 147
- 5.2.1.1 Zeolites 149
- 5.2.1.2 Hydrotalcites 151
- 5.2.1.3 Other Solid Catalysts 154
- 5.2.2 Dehydration Catalysts 154
- 5.2.2.1 Zeolitic and Mesoporous Brønsted Solid Acids 156
- 5.2.2.2 Sulfonic Acid Functionalized Hybrid Organic–Inorganic Silicas 159
- 5.2.2.3 Metal–Organic Frameworks 163
- 5.2.2.4 Supported Ionic Liquids 164
- 5.2.3 Catalysts for Tandem Isomerization and Dehydration of C₅–C₆ Sugars 165
- 5.2.3.1 Bifunctional Zeolites and Mesoporous Solid Acids 165
- 5.2.3.2 Metal Oxides, Sulfates, and Phosphates 167
- 5.2.3.3 Metal–Organic Frameworks 172
- 5.2.4 Catalysts for the Hydrogenation of C₅–C₆ Sugars 172
- 5.2.4.1 Ni Catalysts 173
- 5.2.4.2 Ru Catalysts 176
- 5.2.4.3 Pt Catalysts 178
- 5.2.4.4 Other Hydrogenation Catalysts 178
- 5.2.5 Hydrogenolysis Catalysts 179
- 5.2.6 Other Reactions 183
- 5.3 Conclusions and Future Perspectives 184
- References 186

- 6 Chemistry of C–C Bond Formation Reactions Used in Biomass Upgrading: Reaction Mechanisms, Site Requirements, and Catalytic Materials 207**
Tuong V. Bui, Nhung Duong, Felipe Anaya, Duong Ngo, Gap Warakunwit, and Daniel E. Resasco
- 6.1 Introduction 207
- 6.2 Mechanisms and Site Requirements of C–C Coupling Reactions 208
- 6.2.1 Aldol Condensation: Mechanism and Site Requirement 208
- 6.2.1.1 Base-Catalyzed Aldol Condensation 208

- 6.2.1.2 Acid-Catalyzed Aldol Condensation: Mechanism and Site Requirement 214
- 6.2.2 Alkylation: Mechanism and Site Requirement 219
 - 6.2.2.1 Lewis Acid-Catalyzed Alkylation Mechanism 219
 - 6.2.2.2 Brønsted Acid-Catalyzed Alkylation Mechanism 220
 - 6.2.2.3 Base-Catalyzed Alkylation: Mechanism and Site Requirement 225
- 6.2.3 Hydroxyalkylation: Mechanism and Site Requirement 225
 - 6.2.3.1 Brønsted Acid-Catalyzed Mechanism 227
 - 6.2.3.2 Site Requirement 228
- 6.2.4 Acylation: Mechanism and Site Requirement 229
 - 6.2.4.1 Mechanistic Aspects of Acylation Reactions 230
 - 6.2.4.2 Role of Brønsted vs. Lewis Acid in Acylation Over Zeolites 232
- 6.2.5 Ketonization: Mechanism and Site Requirement 234
 - 6.2.5.1 Mechanism of Surface Ketonization 234
 - 6.2.5.2 Site Requirement 238
- 6.3 Optimization and Design of Catalytic Materials for C–C Bond Forming Reactions 239
 - 6.3.1 Oxides 239
 - 6.3.1.1 Magnesia (MgO) 239
 - 6.3.1.2 Zirconia (ZrO₂) 245
 - 6.3.2 Zeolites 248
 - 6.3.2.1 ZSM-5 248
 - 6.3.2.2 HY 254
 - 6.3.2.3 HBEA 257
 - References 259

7 Downstream Conversion of Biomass-Derived Oxygenates to Fine Chemicals 299

Michèle Besson, Stéphane Loridant, Noémie Perret, and Catherine Pinel

- 7.1 Introduction 299
- 7.2 Selective Catalytic Oxidation 300
 - 7.2.1 Introduction 300
 - 7.2.2 Catalytic Oxidation of Glycerol 301
 - 7.2.2.1 Glycerol to Glyceric Acid (GLYAC) 301
 - 7.2.2.2 Glycerol to Tartronic Acid (TARAC) 304
 - 7.2.2.3 Glycerol to Dihydroxyacetone (DHA) 305
 - 7.2.2.4 Glycerol to Mesoxalic Acid (MESAC) 305
 - 7.2.2.5 Glycerol to Glycolic Acid (GLYCAC) 305
 - 7.2.2.6 Glycerol to Lactic Acid (LAC) 306
 - 7.2.3 Oxidation of 5-Hydroxymethylfurfural (HMF) 307
 - 7.2.3.1 HMF to 2,5-Furandicarboxylic Acid (FDCA) 307
 - 7.2.3.2 HMF to 2,5-Diformylfuran (DFF) 309
 - 7.2.3.3 HMF to 5-Hydroxymethyl-2-furancarboxylic Acid (HMFA) or 5-Formyl-2-furancarboxylic Acid (FFCA) 310
- 7.3 Hydrogenation/Hydrogenolysis 310
 - 7.3.1 Introduction 310
 - 7.3.2 Hydrogenolysis of Polyols 310

7.3.2.1	Hydrodeoxygenation of Polyols	311
7.3.2.2	C–C Hydrogenolysis of Polyols	314
7.3.3	Hydrogenation of Carboxylic Acids	316
7.3.3.1	Levulinic Acid	316
7.3.3.2	Succinic Acid	318
7.3.4	Selective Hydrogenation of Furanic Compounds	320
7.3.5	Reductive Amination of Acids and Furans	323
7.4	Catalyst Design for the Dehydration of Biosourced Molecules	324
7.4.1	Introduction	324
7.4.2	Glycerol to Acrolein	325
7.4.3	Lactic Acid to Acrylic Acid	328
7.4.4	Sorbitol to Isosorbide	330
7.5	Conclusions and Outlook	331
	References	331
8	Conversion of Lignin to Value-added Chemicals via Oxidative Depolymerization	357
	<i>Justin K. Mobley</i>	
8.1	Introduction	357
8.1.1	Cautionary Statements	360
8.2	Catalytic Systems for the Oxidative Depolymerization of Lignin	361
8.2.1	Enzymes and Bio-mimetic Catalysts	361
8.2.2	Cobalt Schiff Base Catalysts	363
8.2.3	Vanadium Catalysts	367
8.2.4	Methyltrioxorhenium (MTO) Catalysts	368
8.3	Commercial Products from Lignin	369
8.4	Stepwise Depolymerization of β -O-4 Linkages	369
8.4.1	Benzylic Oxidation	369
8.4.2	Secondary Depolymerization	376
8.5	Heterogeneous Catalysts for Lignin Depolymerization	382
8.6	Outlook	386
	Acknowledgments	386
	References	386
9	Lignin Valorization via Reductive Depolymerization	395
	<i>Yang (Vanessa) Song</i>	
9.1	Introduction	395
9.2	Late-stage Reductive Lignin Depolymerization	396
9.2.1	Mild Hydroprocessing	398
9.2.2	Harsh Hydroprocessing	404
9.2.3	Bifunctional Hydroprocessing	407
9.2.4	Liquid Phase Reforming	410
9.2.5	Reductive Lignin Depolymerization Using Hydrosilanes, Zinc, and Sodium	414
9.3	Reductive Catalytic Fractionation (RCF)	416
9.3.1	Reaction Conditions	417
9.3.2	Lignocellulose Source	417

9.3.3	Applied Catalyst	427
9.4	Outlook	428
	Acknowledgment	429
	References	429
10	Conversion of Lipids to Biodiesel via Esterification and Transesterification	439
	<i>Amin Talebian-Kiakalaieh and Amin Nor Aishah Saidina</i>	
10.1	Introduction	439
10.2	Different Feedstocks for Biodiesel Production	441
10.3	Biodiesel Production	441
10.3.1	Algal Biodiesel Production	442
10.3.1.1	Nutrients for Microalgae Growth	443
10.3.1.2	Microalgae Cultivation System	444
10.3.1.3	Harvesting	444
10.3.1.4	Drying	445
10.3.1.5	Lipid Extraction	446
10.4	Catalytic Transesterification	446
10.4.1	Homogeneous Catalysts	446
10.4.1.1	Alkali Catalysts	446
10.4.1.2	Acid Catalysts	448
10.4.1.3	Two-step Esterification–Transesterification Reactions	448
10.4.2	Heterogeneous Catalysts	450
10.4.2.1	Solid Acid Catalysts	451
10.4.2.2	Solid Base Catalysts	451
10.4.3	Enzyme-Catalyzed Transesterification Reactions	453
10.5	Supercritical Transesterification Processes	454
10.6	Alternative Processes for Biodiesel Production	455
10.6.1	Ultrasonic Processes	455
10.6.2	Microwave-Assisted Processes	456
10.7	Summary	459
	References	459
11	Upgrading of Lipids to Hydrocarbon Fuels via (Hydro)deoxygenation	469
	<i>David Kubička</i>	
11.1	Introduction	469
11.2	Feedstocks	471
11.3	Chemistry	472
11.4	Technologies	475
11.5	Catalysts	477
11.5.1	Sulfided Catalysts	477
11.5.2	Metallic Catalysts	480
11.5.3	Metal Carbide, Nitride, and Phosphide Catalysts	483
11.6	Conclusions and Outlook	489
	References	490

- 12 Upgrading of Lipids to Fuel-like Hydrocarbons and Terminal Olefins via Decarbonylation/Decarboxylation 497**
Ryan Loe, Eduardo Santillan-Jimenez, and Mark Crocker
- 12.1 Introduction 497
- 12.2 Lipid Feeds 500
- 12.3 deCO_x Catalysts: Active Phases 502
- 12.4 deCO_x Catalysts: Support Materials 508
- 12.5 Reaction Conditions 509

- 13 Conversion of Terpenes to Chemicals and Related Products 529**
Anne E. Harman-Ware
- 13.1 Introduction 529
- 13.2 Terpene Biosynthesis and Structure 529
- 13.3 Sources of Terpenes 532
- 13.3.1 Conifers and Other Trees 532
- 13.3.2 Essential Oils and Other Extracts 534
- 13.4 Isolation of Terpenes 535
- 13.4.1 Tapping and Extraction 535
- 13.4.2 Terpenes as a By-product of Pulping Processes 536
- 13.5 Historical Uses of Raw Terpenes 536
- 13.5.1 Adhesives and Turpentine 536
- 13.5.2 Flavors, Fragrances, Therapeutics, and Pharmaceutical Applications 537
- 13.6 Catalytic Methods for Conversion of Terpenes to Fine Chemicals and Materials 537
- 13.6.1 Homogeneous Processes 538
- 13.6.1.1 Hydration and Oxidation Reactions 538
- 13.6.1.2 Homogeneous Catalysis for the Epoxidation of Monoterpenes 541
- 13.6.1.3 Isomerizations 541
- 13.6.1.4 Production of Terpene Carbonates from CO₂ and Epoxides 543
- 13.6.1.5 Polymers and Other Materials from Terpenes 545
- 13.6.1.6 “Click Chemistry” Routes for the Production of Materials and Medicinal Compounds from Terpenes 548
- 13.6.2 Heterogeneous Processes 551
- 13.6.2.1 Isomerization and Hydration of α -Pinene 551
- 13.6.2.2 Heterogeneous Catalysts for the Epoxidation of Monoterpenes 553
- 13.6.2.3 Isomerization of α -Pinene Oxide 555
- 13.6.2.4 Vitamins from Terpenes 555
- 13.6.2.5 Dehydrogenation and Hydrogenation Reactions of Terpenes 557
- 13.6.2.6 Conversion of Terpenes to Fuels 558
- Acknowledgments 560
- References 561

14	Conversion of Chitin to Nitrogen-containing Chemicals	569
	<i>Xi Chen and Ning Yan</i>	
14.1	Waste Shell Biorefinery	569
14.2	Production of Amines and Amides from Chitin Biomass	571
14.2.1	Sugar Amines/Amides	571
14.2.2	Furanic Amines/Amides	574
14.2.3	Polyol Amines/Amides	576
14.3	Production of N-heterocyclic Compounds from Chitin Biomass	579
14.4	Production of Carbohydrates and Acetic Acid from Chitin Biomass	581
14.5	Production of Advanced Products from Chitin Biomass	584
14.6	Conclusion	587
