

## Contents

### Preface *xiii*

<b>1</b>	<b>Introduction</b>	<i>1</i>
1.1	Dimensionality	<i>2</i>
1.2	Approaching Dimensionality from Outside and from Inside	<i>4</i>
1.3	Dimensionality of Carbon: Solids	<i>8</i>
1.3.1	Three-Dimensional Carbon: Diamond	<i>10</i>
1.3.2	Two-Dimensional Carbon: Graphite and Graphene	<i>10</i>
1.3.3	One-Dimensional Carbon: Cumulene, Polycarbyne, and Polyene	<i>12</i>
1.3.4	Zero-Dimensional Carbon: Fullerene	<i>13</i>
1.4	Something in Between: Topology	<i>14</i>
1.5	More Peculiarities of Dimension: One Dimension	<i>16</i>
1.6	Summary	<i>19</i>
	Exploring Concepts	<i>20</i>
	References	<i>26</i>
<b>2</b>	<b>One-Dimensional Substances</b>	<i>29</i>
2.1	A15 Compounds	<i>32</i>
2.2	Krogmann Salts	<i>37</i>
2.3	Alchemists' Gold	<i>40</i>
2.4	Bechgaard Salts and Other Charge-Transfer Compounds	<i>42</i>
2.5	Polysulfurnitride	<i>45</i>
2.6	Phthalocyanines and Other Macrocycles	<i>47</i>
2.7	Transition Metal Chalcogenides and Halides	<i>48</i>
2.8	Halogen-Bridged Mixed-Valence Transition Metal Complexes	<i>50</i>
2.9	Returning to Carbon	<i>52</i>
2.9.1	Conducting Polymers	<i>53</i>
2.9.2	Carbon Nanotubes	<i>55</i>
2.10	Perovskites	<i>59</i>
2.11	Topological States	<i>61</i>
2.12	What Did We Forget?	<i>62</i>
2.12.1	Poly-deckers	<i>62</i>
2.12.2	Polycarbenes	<i>63</i>

2.12.3	Isolated, Freestanding Nanowires	63
2.12.4	Templates and Filled Pores	64
2.12.5	Asymmetric Growth Using Catalysts	65
2.12.6	Gated Semiconductor Quantum Wires	66
2.12.7	Few-Atom Metal Nanowires	66
2.13	A Summary of Our Materials	68
	Exploring Concepts	69
	References	69
<b>3</b>	<b>Order and Symmetry: The Lattice</b>	<b>75</b>
3.1	The Correlation Function	76
3.2	The Real Space Crystal Lattice and Its <i>Basis</i>	77
3.2.1	Using a Coordinate System	81
3.2.2	Surprises in Two-Dimensional Lattices	86
3.2.3	The One-Dimensional Lattice	91
3.2.4	Polymers as One-Dimensional Lattices	92
3.2.5	Carbon Nanotubes as One-Dimensional Lattices	93
3.3	Bonding and Binding	94
3.4	Spatial Symmetries Are Not Enough: <i>Time Crystals</i>	101
3.5	Summary	102
	Exploring Concepts	103
	References	110
<b>4</b>	<b>The Reciprocal Lattice</b>	<b>111</b>
4.1	Describing Objects Using Momentum and Energy	111
4.1.1	Constructing the Reciprocal Lattice	112
4.1.2	The Unit Cell	114
4.2	The Reciprocal Lattice and Scattering	116
4.2.1	General Scattering	116
4.2.2	Real Systems	120
4.2.3	Applying This to Real One-Dimensional Systems	123
4.3	A Summary of the Reciprocal Lattice	125
	Exploring Concepts	126
	References	128
<b>5</b>	<b>The Dynamic Lattice</b>	<b>129</b>
5.1	Crystal Vibrations and Phonons	130
5.1.1	A Simple One-Dimensional Model	133
5.1.1.1	A Model	133
5.1.1.2	Long Wavelength Vibrations	136
5.1.1.3	Short Wavelength Vibrations	137
5.1.1.4	More Atoms in the Basis	137
5.1.2	More Dimensions	139
5.2	Quantum Considerations with Phonons	143
5.2.1	Conservation of Crystal Momentum	144
5.2.2	General Scattering	144

5.3	Phonons Yield Thermal Properties	147
5.3.1	Internal Energy and Phonons	148
5.3.2	Models of Energy Distribution: $f_p(\omega)$ and $\omega_{K,p}$	150
5.3.2.1	DuLong and Petit: Equipartition of Energy	150
5.3.2.2	Einstein and Quantum Statistics	151
5.3.2.3	Debye and the Spectral Analysis	152
5.3.3	The Debye Approximation	156
5.3.4	Generalizations of the Density of States	159
5.3.5	Other Thermal Properties: Thermal Transport	161
5.4	Anharmonic Effects	162
5.5	Summary of Phonons	168
	Exploring Concepts	168
	References	172
<b>6</b>	<b>Electrons in Solids</b>	<b>173</b>
	Evolving Pictures	174
	Superconductors	176
6.1	Properties of Electrons: A Review	176
6.1.1	Electrons Travel as Waves	176
6.1.1.1	Delocalization	176
6.1.1.2	Localization	178
6.1.2	Electrons Arrive as Particles: Statistics	178
6.1.3	The Fermi Surface	180
6.2	On to the Models	181
6.2.1	The Free-Electron Model	181
6.2.2	Nearly Free Electrons, Energy Bands, Energy Gaps, Density of States	184
6.2.2.1	Bloch's Theorem	185
6.2.2.2	The Nearly Free 1D Model	185
6.2.2.3	Analyzing the 1D Nearly Free Solutions	187
6.2.2.4	Extending Dispersion Curves to 3D	190
6.2.3	Tight Binding or Linear Combination of Atomic Orbitals	191
6.2.3.1	The Formalism	193
6.2.3.2	The s-Band	194
6.2.3.3	s Bands in One Dimension	195
6.2.3.4	s Bands in Two Dimensions	195
6.2.3.5	s Bands in Three Dimensions	196
6.2.4	What About Orbitals Other Than s?	197
6.2.4.1	Building Bands in a Polymer	198
6.2.4.2	Bonding and Antibonding States	198
6.2.4.3	The Polyenes	199
6.2.4.4	Translating to Bloch's Theorem	203
6.2.5	Tight Binding with a Basis	206
6.2.5.1	Hybridization	209
6.2.5.2	Graphene: A Two-Dimensional Example	211
6.2.5.3	Carbon Nanotubes	213

6.3	Are We Done Yet?	215
6.4	Summary	217
	Exploring Concepts	218
	References	223
<b>7</b>	<b>Electrons in Solids Part II: Spatial Heterogeneity</b>	<b>225</b>
7.1	Heterogeneity: Band-Level Diagrams and the <i>Contact</i>	226
7.2	Heterogeneity in Semiconductors	229
7.2.1	Semiconductors: Bandgaps and Doping	230
7.2.1.1	Band-Level Diagrams	230
7.2.1.2	Doping	230
7.2.1.3	Carrier Concentrations in Intrinsic and Doped Semiconductors	235
7.2.1.4	The Fermi Level vs. the Chemical Potential	239
7.2.1.5	Spectroscopy of the Dopant Levels	240
7.2.1.6	Carbon Does Not “Dope” Like Si	242
7.2.2	Junctions with Semiconductors	244
7.3	Other Types of Heterogeneity	249
7.4	Summary	251
	Exploring Concepts	251
	References	257
<b>8</b>	<b>Electrons Moving in Solids</b>	<b>259</b>
8.1	Phenomenology of Electron Dynamics in a Material	259
8.1.1	Free-Electron Metals	259
8.1.2	The Free-Electron Metal as a Fluid	262
8.1.3	Temperature and Conductivity	264
8.2	The Semiclassical Approach: The Boltzmann Equation	267
8.2.1	The Sources of Electron Scattering	267
8.2.2	The Nonequilibrium Distribution Function	268
8.2.3	The Relaxation Time $\tau$	268
8.2.4	The Differential Equation for $g(\mathbf{r}; \mathbf{k}; t)$	268
8.2.5	Introducing Collisions	269
8.2.6	The Relaxation Time Approximation	270
8.2.7	Isotropic Scattering from Stationary States	271
8.2.8	A Simple Example: Ohm’s Law	271
8.2.9	Parabolic Bands	272
8.2.10	Another Simple Example: AC Conductivity and Linear Response	273
8.2.11	An Example with Anisotropy: $\mu = \mu(\mathbf{r})$ and $\nabla_r T \neq 0$	273
8.2.12	The Seebeck Effect and Thermopower	274
8.2.13	A Final Example: Static $\mathbf{E}$ and $\mathbf{B}$ Applied but $\mu \neq \mu(\mathbf{r})$ and $\nabla_r T = 0$	277
8.2.14	The Hall Effect and Magnetotransport	279
8.2.15	The Curious Case of Al	280
8.3	Coherent Transport: The Landauer–Büttiker Approach	281

8.4	General Remarks on Measurements	283
8.4.1	Simple Conductivity	283
8.4.2	Conductivity of Small Particles	287
8.4.3	Conductivity of High Impedance Samples	288
8.4.4	Conductivity Measurements Without Contacts	289
8.5	Complications: Localization, Hopping, and General Bad Behavior	290
8.6	Summary	293
	Exploring Concepts	293
	References	297
<b>9</b>	<b>Polarons, Solitons, Excitons, and Conducting Polymers</b>	<b>301</b>
9.1	Distortions, Instabilities, and Transitions in One Dimension	303
9.1.1	Coupling Charge with the Lattice	303
9.1.2	Peierls Instability	305
9.1.3	Results of Peierls in Real Systems	308
9.1.3.1	Phonon Softening and the Kohn Anomaly	308
9.1.3.2	Fermi Surface Warping	309
9.2	Conjugation and the Double Bond	310
9.3	Conjugational Defects	313
9.4	The Soliton	317
9.4.1	Doping	319
9.4.2	Quasiparticles	320
9.5	Generation of Solitons	325
9.6	Nondegenerate Ground-State Polymers: Polarons	328
9.7	Fractional Charges	332
9.8	Soliton Lifetime	334
9.9	Conductivity and Solitons	337
9.10	Fibril Conduction	341
9.11	Hopping Conductivity: Variable Range Hopping vs. Fluctuation-Assisted Tunneling	345
9.12	Highly Conducting Polymers	353
9.13	Magnetoresistance	354
9.14	Organic Molecular Devices	360
9.14.1	Molecular Switches	360
9.14.2	LB Diodes	363
9.14.3	Organic Light-Emitting Diodes	364
9.14.3.1	Fundamentals of OLEDs	366
9.14.3.2	Materials for OLEDs	370
9.14.3.3	Designs for OLEDs	371
9.14.3.4	Performance of OLEDs	372
9.14.4	Field-Induced Organic Emitters	373
9.14.5	Organic Lasers and Organic Light-Emitting Transistors	376
9.14.5.1	Current Densities	379

9.14.5.2	Contacts	379
9.14.5.3	Polarons and Triplets	379
9.14.6	Organic Solar Cells	380
9.14.7	Organic Field-Effect Transistors	384
9.14.8	Organic Thermoelectrics	385
9.15	Summary	387
	Exploring Concepts	388
	References	390
<b>10</b>	<b>Correlation and Coupling</b>	<b>403</b>
10.1	The Metal-to-Insulator Transition and the Mott Insulator	403
10.1.1	The Hamiltonian	406
10.1.2	The Lattice and Antiferromagnetic Ordering	407
10.1.3	Other Considerations: The Particle-Hole Symmetry (PHS)	407
10.1.4	The Hubbard Model in Lower Dimensions	408
10.1.5	Real One-Dimensional Mott Systems	410
10.2	The Superconductor	411
10.2.1	The Basic Phenomena	411
10.2.1.1	In What Compounds Has Superconductivity Been Observed?	415
10.2.2	A Basic Model	415
10.2.2.1	How Does an Attractive Potential Show Up Between Two Negatively Charged Particles?	416
10.2.2.2	Cooper Pair Binding	418
10.2.2.3	The BCS Ground State	420
10.2.2.4	Supplementary Thoughts	425
10.2.3	Superconductivity Measurements Are Tricky	428
10.2.4	Superconductivity and Dimensionality	430
10.2.5	More on Organic Superconductors	431
10.2.5.1	One-Dimensional Organic Superconductors	432
10.2.5.2	Two-Dimensional Organic Superconductors	435
10.2.5.3	Three-Dimensional Organic Superconductors	436
10.2.6	Trends	438
10.3	The Charge Density Wave	440
10.3.1	The Charge Density Wave and Peierls	440
10.3.1.1	Modulation of the Electron and Mass Densities	441
10.3.1.2	Starting with Polymers	441
10.3.1.3	A Gap Is Introduced	442
10.3.1.4	The Order Parameter	442
10.3.1.5	Phase Dynamics, Pinning, Commensurability, and Solitons	442
10.3.2	Peierls and Coulomb Interactions: Spin Interactions	446
10.3.2.1	$4k_F$ Charge Density Waves	446
10.3.2.2	Spin Peierls Waves	448
10.3.2.3	Spin Density Waves	448
10.3.3	Phonon Dispersion: Phase and Amplitude in CDWs	450
10.3.4	More on Peierls–Fröhlich Mechanisms	452
10.3.5	Spin Density Waves and the Quantized Hall Effect	453
10.4	Plasmons	454

10.4.1	The Drude Model and the Dielectric Function	454
10.4.2	The Significance of the Plasma Frequency	455
10.5	Composite Particles and Quasiparticles: A Summary	457
	Exploring Concepts	457
	References	458
	<b>Intermission</b>	465
<b>11</b>	<b>Magnetic Interactions</b>	467
11.1	Magnetism of the Atom	469
11.2	The Crystal Field	472
11.3	Magnetism in Condensed Systems	474
11.3.1	Paramagnetism	474
11.3.1.1	Curie Paramagnets	476
11.3.1.2	The Weiss Correction	477
11.3.1.3	Free-Electron Magnets	478
11.3.2	Diamagnetism	479
11.4	Dia- and Para-Foundations of Other Magnets	481
11.5	Mechanisms of Interaction: Spin Models	482
11.5.1	The Mean Field Model	483
11.5.2	Ising, Heisenberg, XY, and Hopfield	483
11.5.2.1	Ising Models	483
11.5.2.2	Heisenberg Models	485
11.5.2.3	XY models	485
11.5.2.4	Hopfield Models	487
11.5.3	Spin Wave and Magnons	488
11.5.3.1	Spin Waves	488
11.5.3.2	Thermodynamics	491
11.5.3.3	The Particle Nature of Magnons	493
11.5.3.4	Stoner Excitations	494
11.5.3.5	Coupling to the Electromagnetic Field: Magnon–Photon Coupling	494
11.6	More Complicated Situations	494
11.6.1	Double Exchange	494
11.6.2	Super Exchange	496
11.6.3	RKKY	496
11.7	Time Reversal Symmetry	497
11.8	Summary	498
	Exploring Concepts	499
	References	501
<b>12</b>	<b>Polarization of Materials</b>	503
12.1	Simple Atomic Models	503
12.1.1	Linearity in the Response	504
12.1.2	Relating the Fields	507
12.2	Temperature Dependence	509
12.3	Time Dependence: $\epsilon(\omega)$	510

12.4	A Familiar Equation in Optics	513
12.5	Understanding the Context	514
12.6	The Dielectric Function and Metals	514
12.7	Piezoelectrics, Pyroelectrics, and More	515
12.7.1	The h-BN Example	518
12.8	Summary	519
	Exploring Concepts	519
	References	523
<b>13</b>	<b>Optical Interactions</b>	<b>525</b>
13.1	Maxwell and the Solid (Review)	527
13.1.1	In a Vacuum	527
13.1.2	In a Material	528
13.1.3	A General Solution in the Solid	529
13.1.3.1	A Fun Notational Fact	531
13.2	Polarization Coupling: Polaritons	532
13.2.1	Phonons with Electrical Polarization	532
13.2.2	Phonons Meet Photons	534
13.2.3	The Phonon–Polariton	535
13.2.4	The Plasmon Polariton	538
13.3	Optical Transitions, Excitons, and Exciton Polaritons	543
13.3.1	Transitions	543
13.3.2	Carbon Nanotubes: An Example	546
13.3.3	Color Centers and Dopants	546
13.3.4	Excitons	548
13.3.5	Exciton Polaritons	549
13.4	Kramers–Kronig	549
13.5	Summary	551
	Exploring Concepts	552
	References	555
<b>14</b>	<b>The End and the Beginning</b>	<b>557</b>
	Reference	558
