

## Index

### a

acetylcholinesterase (AChE) enzyme,  
180, 265, 266–267, 270,  
272–275

adenosine triphosphate (ATP), 8, 38,  
39, 82

aerosolized biotoxins, 335, 336

aflatoxins  
carbon nanotubes (CNT), 180, 182  
chronic and toxic features, 173–174  
DNA based biosensor, 176  
metabolic oxidative activation, 173  
QCM biosensor, 182–185

aging, biomarkers of, 83

alcohol dehydrogenase (ADH)  
amperometric biosensors,  
242

alcohol detection, 242, 244

algal blooms, 329, 330–331, 335–337,  
351

alkaline phosphatase labeled  
(ALP)-OTA, 186

$\alpha$ -hemolysin ( $\alpha$ -HL) nanopores,  
232

alpha-synuclein, 84–85

Alzheimer disease, 83

amperometric biosensor, 211–212

analyte-bioreceptor interactions, 4

antibiotics  
amperometric biosensor, 211–212  
electrochemical biosensor, 207  
photoelectrochemical (PEC)  
biosensors, 209–210  
voltammetric biosensors, 207–209

antiretroviral therapy (ART), 87160

Avian influenza viruses (AIV)  
electrochemical biosensors  
DNA and RNA oligonucleotide  
sequences, 297  
DNA sequence-specific detection,  
298  
detection of  
SERS strategy, 290  
transduction process, 297

### b

BIACORE instruments, 161

Biacore-chips, 318

Bio-MEMS novel sensing arrays, 123

bioaffinitive agents, 313

bioanalytical techniques, 203

biochemical detection method, 347

biocides, 260

biomarkers  
Alzheimer disease, 83–85  
applications, 73  
cancer biomarker, 76–80  
cancer cells, 76  
cardiac biomarkers, 80–82  
definition, 73  
gene-based predictive biomarkers,  
73  
HIV biomarkers, 85, 87  
of aging, 83  
pharmacodynamics biomarkers,  
75–76  
predictive biomarker, 75  
prognostic biomarkers, 75  
types, 74, 75–76

- biomimetic sensor system, 216
- Bionic e-Eye, 347
- bioreceptor, 3–5, 40, 62, 164–165, 172–173, 226, 268, 357
- biorecognition process, 4, 340
  - biosensors for cancer biomarker identification, 16
- carbon nanotubes, 129
- catalytic vs. affinity biosensors
  - DNA-aptamer biosensors, 14
  - enzymatic biosensors, 13
  - immunosensors, 13–14
  - peptides-based biosensors, 14
  - whole-cell biosensors, 14–15
- characteristics, 4, 5
- classification, 7
- conventional techniques, 1
- definition, 1
- detection of infectious diseases, 16–17
- for drug detection, 203
  - therapeutic drugs, 212–214
- electrochemical biosensors, 6
- electronic components, 2
- environmental monitoring
  - applications, 16
- evolution, 6
- HIV detection, 149
- label-free biosensor, 138–139
- in microbiology, 15–16
- nanomaterials for, 227, 229
- neurotransmitter, 214, 216–218
- optical biosensors, 9
- quartz-crystal and sensing materials, 271
- rGO-based FET biosensor, 127
- sensitivity, speed, and sensibility, 1
- working principle, 3
- biotin, 60, 157, 163, 186–187, 231, 267, 298, 305, 314–320, 367
- breast cancer detection
  - electrochemical DNA biosensor, 97–98
  - micro fluidic plasmonic biosensor, 100
  - optical biosensor, 98–100
- C**
  - C-reactive protein, 82
  - C-type lectin domain family 5, member A (CLEC5A), 119
  - Camman, Karl, 1
  - cancer biomarker
    - cancer diagnosis, 79
    - cancer medicine, role of, 77–78
    - cancer research, uses of
      - diagnostic tests, 79
      - monitoring, 80
      - risk assessment, 79
      - screening, 79
      - staging, 80
      - types of, 80
    - IDH1/IDH2 mutation, 77
    - MGMT gene promoter, 76
    - types of, 80
  - cancer cell detection
    - biomarkers, 95
    - biosensor
      - application, 96
      - physio-chemical transducer, 96
    - conventional techniques, 95
    - early stage of detection, 96
    - in females
      - breast cancer, 97–102
      - cervical cancer detection, 103–106
    - in males
      - colorimetric nanobiosensors, 106–107
      - oral cancer, 110–111
      - prostate cancer detection, 107–110
  - carbon nanomaterials, 108, 313, 322
  - carbon nanotubes and hybrids
    - biosensors, 53–57
    - classification, 52
    - physical and chemical approaches, 52
  - cardiac biomarkers
    - C-reactive protein, 82
    - creatine kinase, 82
    - lactate dehydrogenase, 82
    - measurements, 81
    - myoglobin, 82

- troponin, 81–82
    - types of, 81
  - cellular biomarkers, for HIV, 86
  - cervical cancer detection
    - automated cervical cancer detection, 105–106
    - impedimetric biosensor, 104–105
  - cetyltrimethylammonium bromide (CTAB), 107, 274, 350
  - chemiresistive sensors, 292–294
  - chitosan, 48, 49, 53, 135–136, 182, 242, 267, 275
  - chlorpromazine detection, 237
    - DNA intercalation based amperometric biosensor, 238
  - chronopotentiogram, 156
  - ciguatera, 336
  - citrinin, 173, 174, 198–199
    - molecular imprinted surface plasmon resonance (SPR) biosensor, 192–194
  - Clenbuterol (4-amino-[t-butylaminomethyl]-3,5-dichlorobenzyl alcohol hydrochloride, CLB), 367
  - CNS depressant drug detection, 228
  - CNS stimulant drug detection, 228
  - cocaine, 224, 226, 229–230, 237, 244
  - cocaine detection, 231, 233
    - colorimetric cocaine aptasensors, 232–234
    - electrochemical aptasensors, 234
    - nanopore biosensor, 231–232
    - quantum dots based optical biosensors, 230–231
  - codeine detection, 239–241
  - colorimetric assay, 189, 346, 348
  - colorimetric cocaine aptasensors, 232–234
  - colorimetric sensor based on Gold nanoparticles (AuNPs), 268
  - conductometric biosensor, 25, 28–29, 196
  - conductometric sensors, 9, 28, 194
  - conventional techniques, 1, 10, 95, 112, 206, 210, 297
  - counter electrode, 24–25, 297
  - creatine kinase, 82
  - cyclophosphamide, 213
- d**
- dengue fever detection
    - conventional methods, 118
    - virus detection
      - impedimetric biosensor, 120–122
      - nanostructured electrochemical biosensor, 118–120
      - plasmonic biosensor, 120
  - depressant drugs, 224
  - 2D-hexagonal boron nitride (2D-hBN), 59
  - diagnostic tests, 79, 120, 150, 151, 312–313, 319, 360, 367
  - differential pulse voltammetry (DPV), 50, 136, 181, 183, 186, 188, 193, 205, 207, 216, 218, 297, 299
  - direct electron transfer (DET), 49, 54, 63
  - DNA-aptamer biosensors, 14
  - domoic acid, 331, 335, 344
  - 3D-printable smartphone, 369–372
  - drug detection
    - antibiotics
      - amperimetric biosensor, 211–212
      - electrochemical biosensor, 207
      - photoelectrochemical (PEC) biosensors, 209–210
      - voltammetric biosensors, 207–209
    - conventional techniques, 206
- e**
- Ebola virus disease (EVD), 127
  - electrical impedance spectroscopy, 7, 8–9
  - electrochemical aptasensors, 134, 177, 186, 208, 234
  - electrochemical biosensor (ECB), 52, 207
    - advantages, 7
    - aptamer based biosensors, 303

- electrochemical biosensor (ECB)  
(*contd.*)
- conductometric biosensor, 28–29
  - conductometric sensors, 9
  - dengue fever virus detection, 119
  - electrical impedance spectroscopy, 8–9
  - fabricated biosensor, 302
  - graphene, 49–50
  - impedimetric biosensors, 26–27
  - miniaturized gold electrode, 297
  - potentiometric biosensor, 8, 25–26
  - reference electrode, working electrode and counter electrode, 297
  - voltametric/amperometric, 8
  - zika virus detection, 122
- electrochemical immunosensors, 54, 102–103, 107–108, 179–180, 182, 186, 198, 300, 342, 367–368
- electrochemical impedance spectroscopy (EIS), 7, 8–9, 26, 56, 104, 119, 122, 134, 180, 213, 297, 302, 303
- energy biosensor
- adenosine triphosphate, 39
  - fluorescence resonance energy transfer, 39
- enzymatic biosensors, 11, 13, 48, 49, 136, 242, 383
- enzyme linked immunosorbent assay (ELISA), 102, 108–110, 119, 120, 127, 129, 135, 136, 150–152, 163, 164, 172, 185, 189, 198, 206, 298, 312, 314, 315, 317, 319, 344, 347, 363–364, 372, 377, 379
- evanescent wave fluorescence biosensors, 10
- exciton-plasmon interactions (EPI), 62
- f**
- field effect transistor (FET) biosensors, 8, 12–13, 48, 50, 96, 102, 127–128, 180, 194, 294, 299
- fluorescence resonance energy transfer, 32, 38, 39, 99, 231
- food allergen, 360, 364, 372
- food poisoning, 335
- fungicides, 256, 257–258, 259, 265
- fusarium biosensor, 198
- FBI and FB2, 175
- trichothecenes infection, 175
- g**
- gamma-aminobutyric acid (GABA) receptors, 229
- gastrointestinal stromal tumor (GIST), 77
- giant magnetoresistive technology (GMR chip), 319–320
- glassy carbon electrodes (GCE), 54, 56, 59, 63, 134, 183, 193, 212, 218, 241
- GMR biosensor platform, 363–367
- gold electrode for the detection of gene (BRCA1), 98
- gold film, 100, 101, 315, 317
- gold nanoparticles-based biosensing, 315
- goldnano rods (GNRs), 129, 274, 349–350
- gold nanowire arrays (AuNWA), 62
- graphene and composites
- applications, 47
  - chemical vapour deposition, 47
  - chitosan, 48
  - composite based electrochemical biosensors, 49–50
  - epitaxial growth method, 47
  - field effect transistor (FET) biosensors, 50, 51
  - functionalization, 47
  - highly oriented pyrolytic graphite, 47
  - inorganic and organic materials, 48
  - selectivity and sensitivity, 48
  - small biomolecules, 48
- graphene based biosensor, 47, 48, 49, 124–126

- graphene quantum dots (GQDs),  
133–134, 210, 217
- gymnodimines, 335
- h**
- hallucinogens, 224, 225, 229
- hemagglutinins (HA), 289, 302,  
311–314, 317–318
- Hepatitis B virus (HBV)  
detection  
carbon nanotube based biosensor,  
128–129  
electrochemical DNA biosensor,  
129–130  
gold nanorod-based localized SPR  
biosensor, 129  
infection, 117
- Hepatitis C virus (HCV), 117  
detection  
aptasensor for HCV core antigen  
detection, 133–134  
gold nanoparticles aggregation,  
131  
impedimetric genosensor, 132,  
133  
nucleic acid testing (NATs) and  
serologic tests, 131
- Hepatitis detection, 129
- herbicides, 256, 257, 258, 260, 261,  
265, 266, 272
- high performance liquid  
chromatography-fluorescence  
detection (HPLC-FLD)  
analysis, 344
- highly oriented pyrolytic graphite  
(HOPG), 47
- human immunodeficiency virus (HIV)  
biomarkers, 85, 87
- DNA electrochemical biosensors  
chronopotentiometric  
transduction, 155  
hybridization, 155  
probe immobilization, 155
- impedometric DNA biosensor,  
162–163
- morphology of, 150
- nanostuctured optical photonic  
crystal biosensor, 159–160
- optical biosensors, 158–159
- piezoelectric biosensor, 163
- structure and genomic specifications,  
150
- surface plasmon resonance (SPR),  
160–162
- ultrasensitive biosensors, 157–158
- virus capture, 160
- i**
- illicit drugs  
biosensor for, 226, 227  
depressant drugs, 224  
drug's effect on brain and body, 225  
hallucinogens, 225  
narcotics, 224–225  
naturally occurring drugs, 224  
plant extracts, 224  
semi synthetic drugs, 224  
signs of addiction, 225  
stimulants, 224  
synthetic drugs, 224
- illumination sensor, 372–374
- immobilization technique, 4, 14
- immunoassays, 16, 28, 102, 136, 183,  
191, 226, 273–274, 291–292,  
313–315, 317, 319, 321, 322,  
337, 342–344, 346–348, 351,  
360, 364, 383
- immunosensors, 7, 9–10, 13–14, 24,  
26, 28, 52, 54–55, 98, 102–103,  
107–108, 120, 132–133,  
163–164, 179–180, 182–183,  
185–186, 188, 194, 198,  
211–214, 235, 272, 298, 300,  
304, 314–315, 321, 342–344,  
367–369
- impedimetric biosensors, 25–27, 56,  
104–105, 120–122
- impedimetric genosensor, 132–133
- influenza rapid diagnostic tests (IRDTS),  
313
- insecticides, 256–257, 259–260, 261,  
265, 266, 272

- integrated quartz crystal microbalance immunosensor, 164
  - interdigitated microelectrodes, 305, 344
  - interdigitated transducers (IDTs), 35, 344
  - ion selective electrodes (ISE), 8, 25–26
  - ion-selective field effect transistors (ISFET), 8, 194
  - iron oxide nanomaterials, 348
  - isocitrate dehydrogenase (IDH1/IDH2), 77
- j**
- Japanese encephalitis virus (JEV), 125–126
- k**
- kyotorphin (KTP), 85
- l**
- label-free optical detection technique, 9
  - lactate dehydrogenase, 82
  - limulus amoebocyte lysate (LAL) assay, 349
  - liquid crystal display (LCD), 4
  - localized surface plasmon resonance (LSPR), 10, 129, 138, 154, 317, 319, 322
  - long range surface plasmons (LRSPs), 341
- m**
- magneto-resistance (MR), 320, 364, 367
  - mercaptopyrimethyltrimethylsilylamine (MPS), 154, 265–266
  - marine lipophilic toxins (MLTs), 335
  - marine toxins
    - algal blooms, 330
    - biosensing, 337–338
      - goldnanorods aggregation based optical biosensor, 349–350
      - shell fish, detection of, 344–345
      - smart phone based portable detection system, 345–347
      - SPR based biosensors, 338–344
      - superparamagnetic nanobeads based immunochromatographic assay, 347–348
      - classification, 330–335
      - human health, effects of, 335–337
  - Marquis test, 226
  - mass based biosensor
    - piezoelectric biosensors, 32–33
    - quartz crystal micro balances, 33–34
    - SAW, 34–35
  - MBio waveguide-based system, 346
  - 3-mercaptopropionic acid
    - self-assembled monolayers (SAM), 235
    - metal and metal oxide nanoparticles features, 60
  - methamphetamine colorimetric detection, 236
  - methamphetamine detection, 234–235, 237
  - methotrexate (MXT), 212–213
  - methyl guanine-DNA methyltransferase (MGMT), 76–77
  - mhealthcare monitoring, 360, 362
  - micro fluidic plasmonic biosensor, 100
  - microarray-based approach, 315
  - MobilePAL smartphone, 379
  - molecular receptors, nanobiosensors, 229
  - molecularly imprinted polymers (MIPs), 172, 192, 194, 213, 343–344
  - molybdenum disulphide, 342
  - morphine detection, 241–242
  - mouse bioassay (MBA), 291–293, 344–345
  - multiwalled carbon nanotubes (MWCNTs), 52–54, 56–57, 110, 128, 180, 182, 207, 239, 241–242, 294–296, 304, 368–369
  - mycobacterium tuberculosis detection, 137–139
  - mycotoxins analysis
    - aflatoxins, 173–174
    - biosensor technology, 172

- citrinin, 174  
 conventional analytical methods, 172  
 electrochemical detection systems, 179–180  
 enzyme linked immunosorbent assays, 172  
 fusarium, 175  
 heterogeneous distribution, 172  
 ochratoxins, 174  
 patulin (PAT), 174–175  
 myoglobin, 82
- n**
- nanobiosensor, 1–17, 56, 58, 60, 106, 119, 203, 205–208, 211–212, 219, 226, 229–231, 233, 238, 239, 245, 290, 357  
 nanomaterials-based biosensors  
   advantages, 45  
   carbon nanotubes and hybrids  
     biosensors, 53–57  
     classification, 52  
     electrochemical biosensor, 52  
     physical and chemical approaches, 52  
   1D nanomaterials, 46  
   2D nanostructures, 46  
   3D structures, 46  
   graphene and composites, 46–51  
   metal and metal oxide nanoparticles, 60  
   nitride-based biosensors, 57–58  
     biosensing application, 58–60  
     graphite carbon nitride (g-C<sub>3</sub>N<sub>4</sub>)  
       nanomaterials, 58  
     silicon nitride (Si<sub>3</sub>N<sub>4</sub>) based  
       nano-fabrication technology, 58  
 nanopore biosensor, 231–232  
 nanostructured biosensor fabrication process, 120  
 nanostructured photonic crystals (PC) biosensors, 154  
 narcotics, 224–225, 228, 229, 239, 241  
 neurodegenerative disorder, 83–84  
 neurofibrillary tangles (NFT), 84  
 neuronal pentraxins (NPR), 84–85  
 neurotransmitter, 63, 205, 214, 216–218, 226, 265, 273  
 nicotine, 229–230  
 nitrogen-doped multi-walled carbon nanotubes (N-MWCNTs), 294–296  
 non-small-cell lung carcinoma (NSCLC), 77  
 nuclear magnetic resonance (NMR) spectroscopy, 120  
 nucleic acid amplification tests (NAAT) devices, 126, 374  
 nucleic acid testing (NATs), 131
- o**
- ochratoxin A (OTA), 174, 185–186, 188–192, 374  
 ochratoxins  
   aptamer-DNAzyme hairpin biosensor, 186–189  
   horseradish peroxidase-screen printed biosensor, 185–186  
   mutagenic and carcinogenic secondary metabolite, 174  
   QCM-D biosensor, 189–192  
   secondary fungal metabolites, 174  
 one-step wash-free assay, 367  
 optical biosensors, 158  
   electronic biosensors, 12–13  
   evanescent wave fluorescence biosensors, 10–11  
   fluorescence effect, 31–32  
   label-free optical detection technique, 9  
   labeled detection technique, 9  
   localized SPR (LSPR), 10  
   piezoelectric biosensors, 11–12  
   Raman & Fourier-transform infrared spectroscopy (FT-IR), 30  
   SPR effect, 29  
   surface plasmon resonance biosensors, 10  
 oral fluid L-lactate detection, 383  
 organochlorine pesticides (OCPs), 261  
 organophosphorus pesticides (OPs), 272–273, 275

- Osteryoung square-wave voltammetry (OSWV), 298–299
- ovarian cancer detection
- magnetic nanoparticle-antibody conjugates (MNPs-ABS) based assay, 103
  - ZnO-Au based electrochemical biosensor, 102–103
- P**
- paired surface plasma waves biosensor (PSPWB), 319
- patulin (PAT)
- cerium oxide ISFETs based immune biosensor, 194
  - conductometric enzyme biosensor, 196
  - contamination in fruits and vegetable-based products, 175
- PEGylated arginine functionalized magnetic nanoparticles (PA-MNPs), 105
- peptides-based biosensors, 14
- pesticides
- agricultural pests and vectors of plant disease, 259–260
  - AuNPs/MPS/Au electrode sensing layer based electrochemical biosensor, 265–266
  - beneficiaries, 258–259
  - benefits of, 258
  - citrate-stabilized AuNPs based optical biosensor, 266–267
  - control mechanism and strategies, 260
  - detrimental effects
    - human health, impact on, 262
    - long term effects, 263
    - on children, 263–264
    - on environment, 264
    - on Pregnant Women, 263
    - safety measures, 264–265
    - short term effects, 262–263
  - food and drinking water, 256
  - fungicides, 257–258

- Prostate Cancer Detection, 107–110
- prostate specific antigen (PSA), 107–110, 155

**q**

- Q value, 34, 36
- quantum dots based optical biosensors, 45, 110, 133, 210, 230, 272, 319, 349, 360
- quartz crystal microbalance (QCM), 12, 32–34, 100–102, 103, 158–159, 164, 173, 175, 182–183, 185, 189–191
- quenching of unincorporated amplification signal reporters (QUASR) technique, 126

**r**

- Raman & Fourier-transform infrared spectroscopy (FT-IR), 29, 30
- rapid influenza diagnostic test (RIDT), 313
- reactive oxygen species (ROs), 330
- reference electrode, 8, 24–26, 34, 156, 297
- reproducibility, 2, 4–5, 7, 13, 73, 97, 176, 180, 186, 195, 196, 198, 219, 275, 292, 297, 322, 364, 367
- reverse transcriptase polymerase chain reaction (RT-PCR), 16, 97, 127, 131, 151, 290, 313, 315–316, 322, 345
- reverse transcription-loop-mediated isothermal amplification (RT-LAMP) assay, 122, 126, 377

**s**

- saxitoxin (STX), 331, 338–344
- Scotch-tape method, 47
- screen printed electrode (SPE), 157, 185, 213–214, 242, 302, 368
- selective evolution of ligands by exponential enrichment (SELEX) approach, 14, 133, 156
- selectivity, 2–7, 14–15, 25, 45, 48, 49, 53, 64, 81, 97, 122, 124, 126–128, 130, 132, 151, 153, 155–156, 159, 176, 179, 192,

- 196, 210–214, 217–219, 226–227, 238, 241, 267, 296–297, 321, 338, 343, 364, 380
- sensitivity and linearity, 2, 5
- serologic tests, 131
- silicon nanowire sensor, 119, 229, 321–322
- single walled CNTs (SWCNTs), 52, 54–55, 57, 128, 180, 182, 218, 294, 304, 314
- skin contact, 263, 335, 336
- smartphone based biosensors
  - ambient light-based optical biosensing platform, 372–374
  - applications, 360–363
  - clenbuterol, detection of, 367–369
  - CVD monitorings, 377–379
  - GMR biosensor platform, 363–367
  - in cardiology, 381, 382
  - novel 3D-printable smartphone, 369–372
  - oral fluid L-lactate detection, 383–385
  - point-of-care diagnostics, 374–377
  - ZnO and graphene modified electrodes, for VOC detection, 379–381
- solid phase photopolymerisation, 343
- spirolides, 33
- stability, 2, 5, 7, 13–15, 17, 33, 52, 57–61, 77, 102, 107, 130, 132–133, 173, 176, 180, 194, 214, 226, 239, 244, 263, 273–275, 303, 313, 322, 341, 343
- stimulants, 28, 224, 228–230, 234, 242
- surface enhanced Raman Spectroscopy (SERS) based nanosensor
  - carbon nanotubes in chemiresistive sensors, 292–297
  - magnetic immunoassay, 291–292
- surface plasma wave (SPW), 317, 319, 341
- surface plasmon resonance (SPR), 29, 119, 120, 151, 160

- surface plasmon resonance (SPR) (*contd.*)
    - absorption, 235
    - biosensors, 10
  - surface-enhanced Raman scattering (SERS) spectroscopy, 45, 176, 178, 213, 290–293, 304, 319
  - swine influenza viruses
    - carbon-based nanomaterials, 313–315
    - diagnostic methods, 312–313
    - gold nanoparticles-based
      - biosensing, 315
      - localized surface plasmon resonance sensor, 315–319
    - magnetic nanoparticles-based
      - biosensing, 319–321
  - synthetic drugs, 223–224
  - systematic evolution of ligands by exponential enrichment, 156
- t**
- terahertz effect, 36–37
  - terbuthylazine (TBA), 266therapeutic drugs, 96, 212–214
  - thermal biosensors
    - terahertz effect, 36–37
    - thermal radiation, 37–38
    - thermomertic sensors, 35–36
  - thermal detector, 37
  - thermal radiation, 37–38
  - thermal resistance, 36
  - thermistor, 35–36
  - thermometric sensors, 35–36, 96
  - thiopurine methyl-transferase (TPMPT) enzyme, 76
  - transducer, 1, 3–6, 9–11, 14–15, 23–24, 27, 32, 35–36, 45, 96, 98–100, 149, 153–155, 158–159, 163, 173, 194, 203–205, 207, 210, 212, 216, 218, 226, 234, 264–265, 267–268, 270, 272, 302, 314, 317, 321–322, 342–344, 357
  - troponin, 80–82
  - tuberculosis (TB), 118, 137–139, 360
  - typhoid, 118
    - detection
      - nanocomposites of grapheme oxide-chitosan, 135, 136
- u**
- ultrasensitive biosensors, 157
    - fabrication process, 158
- v**
- VOCs detection, 379–381
  - voltammetric/amperometric, 8
  - voltammetric biosensors, 207–209
- w**
- Western blot assay, 151–152, 164, 290
  - whole-cell biosensors, 14–15
  - working electrode, 6, 8, 24–25, 156, 187, 207, 219, 297–298, 300
- y**
- yellow fever, 117, 126–127
    - field-effect transistor biosensor, 127
- z**
- zika viral nonstructural protein 1 (ZIKV NS1), 125
  - zika virus
    - detection
      - for early stages, 122–124
      - novel graphene-based biosensor, 124–126
      - smartphone-based diagnostic platform, 126
      - electrochemical biosensor, 124
    - ZIKV detection, 122–124, 374, 377
  - zinc oxide nanostructures, 98, 102
