

Index

a

acrylics 5–7, 241, 243, 247, 253–255, 258
 advanced planar PSC 124
 air battery textiles 216, 217
 aligned electro-spun fiber (AEF) 74, 75
 aluminum-air battery fibers 178
 anti-solvent engineering 121
 antistatic fibers 8, 11, 12
 antistatic textiles 12, 16, 19
 artificial intelligence 200, 274, 344
 asymmetric fibrous solid supercapacitor (AFSSC) 167
 atmospheric-pressure CVD (APCVD) 37, 38
 atomic fluorescence spectrometry (AFS) 54, 61, 64
 atomic force microscope (AFM) 54, 59, 61
 atomic layer deposition (ALD) 37, 41
 auger electron spectroscopy (AES) 54, 61

b

battery fibers 157
 dual-ion battery (DIB) 182
 lithium-ion batteries 173–174
 lithium-sulfur battery 174–177
 metal-air battery 177–180
 primary battery 170–173
 sodium-ion battery (SIB) 180, 181
 zinc-ion battery (ZIB) 180
 bending 46, 74, 76, 115, 119, 121, 130, 137, 139, 145, 146, 159, 170, 176,

178, 180, 181, 200, 201, 205, 212, 214, 218, 222, 231, 247–249, 253, 277, 297–302, 304, 321, 329, 333, 334, 348, 350

biodegradable polymers 71, 73
 biomedical electronics 200
 biscrolling process 75
 blended drawing process 70
 blending method 19
 breathability 95, 173, 198, 345, 348, 349
 buckled structure 236, 240, 263
 bulky chemical modification method 20
 bulky electronic devices 273

c

capacitance-based strain sensors 293
 capacitive strain sensing textiles 286, 292–296
 capacitive stress sensing textile 274, 278–284
 carbon-based TE materials 142
 carbon blacks (CB) 19, 139, 233, 235
 carbon fiber (CF) 84, 86, 91, 107, 115, 117, 127, 128, 137, 145, 158, 172, 198, 211, 212, 348
 carbonized silk fabrics (CSFs) 287, 290
 carbon nanotubes (CNTs) 74, 84, 86, 94, 106, 112, 117, 118, 122, 142, 159, 166, 200, 213, 218, 233, 236, 249, 273, 280, 331, 346
 chemical fiber 1
 acrylic 6–7

- chemical fiber (*contd.*)
 - natural/synthetic polymer compounds
 - 4
 - nylon 5
 - polyester 5
 - regenerated fibers 7
 - vinylon 6
 - viscose fibers 7
 - chemical liquid phase deposition (CLPD) 79–87
 - chemical sensing textiles

silicon-air battery fibers 178, 180
silicon-oxygen battery (SOB) fiber 180, 218
silk 2–4, 6, 14, 30, 74, 94, 134, 137, 255, 273, 287, 290, 291, 298–302, 334, 348
silver nanowire 122, 295
single fiber-shaped TENGs 135

- single-walled carbon nanotube (SWCNT)
 - 71, 280, 331
- skin thermal imaging function 326
- Smart Cushion 282
- smart electronic textiles
 - application of 354
 - diversity functions 347
 - energy efficiency 346–347
 - fabrication technology 349–351
 - wearing comfort 347–349
- smart energy fibers
 - air permeability
 - textile materials, influence of 253–255
 - textile structure design 255–258
 - color-change ability
 - color-changeable materials 259–261
 - color-changeable textiles 261–263
 - energy harvesting textiles
 - mechanical energy harvesting technologies 205–208
 - photovoltaic energy harvesting textiles 198–203
 - thermoelectric energy harvesting technology 203–205
 - energy storage textiles 209
 - fabric-type electrode 197
 - hybrid energy textiles 218–219
 - hydrophobicity
 - conventional hydrophobic fabrics 240–241
 - hydrophobic coatings of 241–245
 - layer-by-layer assembling 197
 - mechanical stability of 247–249
 - stretchable electrode 232
 - electrode structural designs 236–238
 - helical structure 239
 - stressing testing of 239
 - stretchable solar cells 238
 - triboelectric nanogenerators (TENGs) 238
 - working stability 251–253
 - sodium-ion battery (SIB) 51, 180, 181
 - soft skin-like triboelectric nanogenerator (STENG) 327
 - sol-gel method 45, 46, 48, 50, 84, 86, 243, 244, 247
 - solvothermal method 81, 82, 84
 - spinning method 24, 129, 162, 210
 - spray-casting 263
 - spray pyrolysis (SP) 45, 50–52, 92
 - sputter coating 34–36
 - sputtering gold nanoparticles 35
 - sputtering process 91, 92
 - strain sensing textiles
 - capacitive 292–296
 - piezoresistive 286–292
 - triboelectricity 296–298
 - stress sensor textiles
 - capacitive 278–284
 - piezoresistive 274–278
 - stretchable sheath-core structural triboelectric fiber (SSCTEF) 297
 - supercapacitor (SC) fibers 137, 157, 162
 - composited capacitive materials 166–169
 - devices 209, 249
 - electrode-electrolyte interface 158, 159
 - Faradaic electron transfer reactions 158
 - 2D configuration 158
 - superhydrophobic coatings 240–246
 - supramolecular structure 21, 25
 - surface modification method 69, 70, 76–79, 145, 146, 245
 - surface treatment method 20
 - suspended gate organic thin-film transistors (SGOTFTs) 280
 - synthetic fibers 1, 5–7, 9, 18, 243
 - synthetic polymer fibers 71

t

 - temperature coefficient of resistivity (TCR) 306
 - template-assisted synthesis 79, 84, 85
 - textile device fabricating process 351
 - textile fibers 1, 2, 7, 12, 13, 78, 243

- textile pressure sensors 281–284
- textile-type electrodes 94, 197, 199, 209
- textile-type electronic devices 29, 335, 341, 347
- thermal annealing 88
- thermal drawing process 70, 74–76, 129, 130
- thermal evaporation method 90, 111
- thermal fiber drawing (TFD) 77
- thermochromic materials 25, 259, 261
- thermochromic textiles 24–27
- thermoelectric devices 140–147, 203, 335
- thermoelectric energy harvesting
technology 198, 203–205, 225
- thermoelectric fibers 105, 331
flexible fiber-shaped thermoelectric devices 145
Seebeck coefficient 140
wearable thermoelectric devices 141–145
- thermoelectric generator (TEG) 140, 146, 203, 204, 220, 221, 317, 320, 330
- thermoelectric harvesting devices 203
- thin film analysis method
chemical composition and structure properties 60–64
crystal structure properties 54–58
morphology properties 58–60
- thin film deposition technology 33, 34, 39, 64
- thiophene oligomer 109
- traditional textiles
knitted fabrics 14
nonwoven fabric 15
plain weave 14
satin weave 14
twill weave 14
warp knitted fabrics 14
woven fabrics 13
- transmission electron microscope (TEM) 54, 59
- trans-polyisoprene 21
- triboelectric fibers 105
freestanding triboelectric layer mode 134
lateral sliding mode 133
single-electrode mode 133–134
- triboelectric fiber devices 135–140
- triboelectrification materials 134–135
- vertical contact separation mode 133
- working principle 132–134
- triboelectric generator 221, 280
- triboelectricity strain sensing textiles 286, 296–298
- triboelectric nanogenerators (TENGs) 132–134, 137, 139, 205, 207, 208, 222, 238, 239, 314, 317, 322, 324, 327, 331, 343
- triboelectric stress sensing textiles 284
- triboelectric textiles 207, 329
- triboelectrification materials 134–135
- triphenylamine 109
- twill textile 256
- twill weave 13, 14, 205
- twisting 99, 106, 109, 130, 139, 159, 174, 247–249, 253, 273, 277, 298, 300–302, 321, 331, 333, 334, 348, 351
- 2D open-mesh structure 238
- two-step solution process 121
- U**
- ultralong hydroxyapatite nanowires 83
- ultraviolet-visible (UV-Vis)
spectrophotometry 54, 61, 62
- UV irradiation 25
- V**
- vacuum-assisted flocculation (VAF) 235
- vacuum evaporation 34–36
- vapor phase polymerization (VPP) 76, 203
- vertical contact-separation mode 133, 138, 315
- vinylon 5–7
- viscose fibers 7, 8

W

warp knitted fabrics 14, 15
warp knitting 256
waterproof 12, 16, 18, 19, 177, 215, 240,
245, 247, 252
wearability 132, 177, 219, 345, 349
wearable electronic intelligent textiles
27–30, 344
wearable/implantable biosensors 28
weaving process 13, 28, 249, 333, 334,
347
weft knitting 256
wet etching 42, 43
wet-process deposition technology
chemical reaction coating 45–49
electrochemical reaction method
49–50
Langmuir–Blodgett technique 51–54
spray pyrolysis 50–51

wet spinning 69–72, 74, 76, 146, 176,
192, 287, 290, 331
wire-shaped photo-anodes 96, 200
wire-type photo-anode 96
woven fabrics 13, 15, 16, 22, 33, 65, 192,
207, 231, 277
woven supercapacitor (W-SC)
222, 247

X

X-ray diffraction (XRD) 55
X-ray photoelectron spectroscopy (XPS)
56

Z

zinc-air battery fibers 178, 218
zinc-ion battery (ZIB) 76, 180, 212–215,
218, 245
Zn electrode 99
