Preface	<i>xv</i>
Foreword	<i>xxix</i>
1	Equilibria and thermochemistry 1
1.1	Introduction 1
1.2	Equilibrium-free enthalpy: reaction-free energy or Gibbs energy 1
1.3	Heat of reaction and variation of the entropy of reaction (reaction entropy) 2
1.4	Statistical thermodynamics 4
1.4.1	Contributions from translation energy levels 5
1.4.2	Contributions from rotational energy levels 5
1.4.3	Contributions from vibrational energy levels 6
1.4.4	Entropy of reaction depends above all on the change of the number of molecules between products and reactants 7
1.4.5	Additions are favored thermodynamically on cooling, fragmentations on heating 7
1.5	Standard heats of formation 8
1.6	What do standard heats of formation tell us about chemical bonding and ground-state properties of organic compounds? 9
1.6.1	Effect of electronegativity on bond strength 10
1.6.2	Effects of electronegativity and of hyperconjugation 11
1.6.3	π -Conjugation and hyperconjugation in carboxylic functions 12
1.6.4	Degree of chain branching and Markovnikov's rule 13
1.7	Standard heats of typical organic reactions 14
1.7.1	Standard heats of hydrogenation and hydrocarbation 14
1.7.2	Standard heats of C–H oxidations 15
1.7.3	Relative stabilities of alkyl-substituted ethylenes 17
1.7.4	Effect of fluoro substituents on hydrocarbon stabilities 17
1.7.5	Storage of hydrogen in the form of formic acid 18
1.8	Ionization energies and electron affinities 20
1.9	Homolytic bond dissociations; heats of formation of radicals 22
1.9.1	Measurement of bond dissociation energies 22
1.9.2	Substituent effects on the relative stabilities of radicals 25
1.9.3	π -Conjugation in benzyl, allyl, and propargyl radicals 25
1.10	Heterolytic bond dissociation enthalpies 28
1.10.1	Measurement of gas-phase heterolytic bond dissociation enthalpies 28
1.10.2	Thermochemistry of ions in the gas phase 29
1.10.3	Gas-phase acidities 30
1.11	Electron transfer equilibria 32
1.12	Heats of formation of neutral, transient compounds 32
1.12.1	Measurements of the heats of formation of carbenes 32
1.12.2	Measurements of the heats of formation of diradicals 33
1.12.3	Keto/enol tautomerism 33
1.12.4	Heat of formation of highly reactive cyclobutadiene 36
1.12.5	Estimate of heats of formation of diradicals 36

1.13	Electronegativity and absolute hardness	37
1.14	Chemical conversion and selectivity controlled by thermodynamics	40
1.14.1	Equilibrium shifts (Le Chatelier's principle in action)	40
1.14.2	Importance of chirality in biology and medicine	41
1.14.3	Resolution of racemates into enantiomers	43
1.14.4	Thermodynamically controlled deracemization	46
1.14.5	Self-disproportionation of enantiomers	48
1.15	Thermodynamic (equilibrium) isotopic effects	49
	1.A Appendix, Table 1.A.1 to Table 1.A.24	53
	References	92
2	Additivity rules for thermodynamic parameters and deviations	109
2.1	Introduction	109
2.2	Molecular groups	110
2.3	Determination of the standard group equivalents (group equivalents)	111
2.4	Determination of standard entropy increments	113
2.5	Steric effects	114
2.5.1	Gauche interactions: the preferred conformations of alkyl chains	114
2.5.2	(<i>E</i>)- vs. (<i>Z</i>)-alkenes and <i>ortho</i> -substitution in benzene derivatives	117
2.6	Ring strain and conformational flexibility of cyclic compounds	117
2.6.1	Cyclopropane and cyclobutane have nearly the same strain energy	118
2.6.2	Cyclopentane is a flexible cycloalkane	119
2.6.3	Conformational analysis of cyclohexane	119
2.6.4	Conformational analysis of cyclohexanones	121
2.6.5	Conformational analysis of cyclohexene	122
2.6.6	Medium-sized cycloalkanes	122
2.6.7	Conformations and ring strain in polycycloalkanes	124
2.6.8	Ring strain in cycloalkenes	125
2.6.9	Bredt's rule and "anti-Bredt" alkenes	125
2.6.10	Allylic 1,3- and 1,2-strain: the model of banana bonds	126
2.7	π/π -, n/π -, σ/π -, and n/σ -interactions	127
2.7.1	Conjugated dienes and diynes	127
2.7.2	Atropisomerism in 1,3-dienes and diaryl compounds	129
2.7.3	α,β -Unsaturated carbonyl compounds	130
2.7.4	Stabilization by aromaticity	130
2.7.5	Stabilization by $n(\text{Z:})/\pi$ conjugation	132
2.7.6	π/π -Conjugation and σ/π -hyperconjugation in esters, thioesters, and amides	133
2.7.7	Oximes are more stable than imines toward hydrolysis	136
2.7.8	Aromatic stabilization energies of heterocyclic compounds	136
2.7.9	Geminal disubstitution: enthalpic anomeric effects	139
2.7.10	Conformational anomeric effect	141
2.8	Other deviations to additivity rules	144
2.9	Major role of translational entropy on equilibria	146
2.9.1	Aldol and crotonalization reactions	146
2.9.2	Aging of wines	148
2.10	Entropy of cyclization: loss of degrees of free rotation	151
2.11	Entropy as a synthetic tool	151
2.11.1	Pyrolysis of esters	151
2.11.2	Method of Chugaev	152
2.11.3	Eschenmoser–Tanabe fragmentation	152
2.11.4	Eschenmoser fragmentation	153
2.11.5	Thermal 1,4-eliminations	153
2.11.6	Retro-Diels–Alder reactions	156
	2.A Appendix, Table 2.A.1 to Table 2.A.2	157
	References	161

3	Rates of chemical reactions	177
3.1	Introduction	177
3.2	Differential and integrated rate laws	177
3.2.1	Order of reactions	178
3.2.2	Molecularity and reaction mechanisms	179
3.2.3	Examples of zero order reactions	181
3.2.4	Reversible reactions	182
3.2.5	Parallel reactions	183
3.2.6	Consecutive reactions and steady-state approximation	183
3.2.7	Consecutive reactions: maximum yield of the intermediate product	184
3.2.8	Homogeneous catalysis: Michaelis–Menten kinetics	185
3.2.9	Competitive vs. noncompetitive inhibition	186
3.2.10	Heterogeneous catalysis: reactions at surfaces	187
3.3	Activation parameters	188
3.3.1	Temperature effect on the selectivity of two parallel reactions	190
3.3.2	The Curtin–Hammett principle	190
3.4	Relationship between activation entropy and the reaction mechanism	192
3.4.1	Homolysis and radical combination in the gas phase	192
3.4.2	Isomerizations in the gas phase	193
3.4.3	Example of homolysis assisted by bond formation: the Cope rearrangement	195
3.4.4	Example of homolysis assisted by bond-breaking and bond-forming processes: retro–carbonyl–ene reaction	195
3.4.5	Can a reaction be assisted by neighboring groups?	197
3.5	Competition between cyclization and intermolecular condensation	197
3.5.1	Thorpe–Ingold effect	198
3.6	Effect of pressure: activation volume	201
3.6.1	Relationship between activation volume and the mechanism of reaction	201
3.6.2	Detection of change of mechanism	202
3.6.3	Synthetic applications of high pressure	203
3.6.4	Rate enhancement by compression of reactants along the reaction coordinates	204
3.6.5	Structural effects on the rate of the Bergman rearrangement	205
3.7	Asymmetric organic synthesis	206
3.7.1	Kinetic resolution	206
3.7.2	Parallel kinetic resolution	211
3.7.3	Dynamic kinetic resolution: kinetic deracemization	212
3.7.4	Synthesis starting from enantiomerically pure natural compounds	215
3.7.5	Use of recoverable chiral auxiliaries	217
3.7.6	Catalytic desymmetrization of achiral compounds	220
3.7.7	Nonlinear effects in asymmetric synthesis	226
3.7.8	Asymmetric autocatalysis	228
3.8	Chemo- and site-selective reactions	229
3.9	Kinetic isotope effects and reaction mechanisms	231
3.9.1	Primary kinetic isotope effects: the case of hydrogen transfers	231
3.9.2	Tunneling effects	232
3.9.3	Nucleophilic substitution and elimination reactions	234
3.9.4	Steric effect on kinetic isotope effects	239
3.9.5	Simultaneous determination of multiple small kinetic isotope effects at natural abundance	239
	References	240
4	Molecular orbital theories	271
4.1	Introduction	271
4.2	Background of quantum chemistry	271
4.3	Schrödinger equation	272
4.4	Coulson and Longuet-Higgins approach	274

- 4.4.1 Hydrogen molecule 275
- 4.4.2 Hydrogenoid molecules: The PMO theory 276
- 4.5 Hückel method 277
- 4.5.1 π -Molecular orbitals of ethylene 278
- 4.5.2 Allyl cation, radical, and anion 279
- 4.5.3 Shape of allyl π -molecular orbitals 282
- 4.5.4 Cyclopropenyl systems 282
- 4.5.5 Butadiene 285
- 4.5.6 Cyclobutadiene and its electronic destabilization (antiaromaticity) 286
- 4.5.7 Geometries of cyclobutadienes, singlet and triplet states 288
- 4.5.8 Pentadienyl and cyclopentadienyl systems 291
- 4.5.9 Cyclopentadienyl anion and bishomocyclopentadienyl anions 292
- 4.5.10 Benzene and its aromatic stabilization energy 294
- 4.5.11 3,4-Dimethylidenecyclobutene is not stabilized by π -conjugation 295
- 4.5.12 Fulvene 297
- 4.5.13 [*N*]Annulenes 298
- 4.5.14 Cyclooctatetraene 301
- 4.5.15 π -systems with heteroatoms 302
- 4.6 Aromatic stabilization energy of heterocyclic compounds 305
- 4.7 Homoconjugation 308
- 4.7.1 Homoaromaticity in cyclobutenyl cation 308
- 4.7.2 Homoaromaticity in homotropylium cation 308
- 4.7.3 Homoaromaticity in cycloheptatriene 310
- 4.7.4 Bishomoaromaticity in bishomotropylium ions 311
- 4.7.5 Bishomoaromaticity in neutral semibullvalene derivatives 312
- 4.7.6 Barrelene effect 313
- 4.8 Hyperconjugation 314
- 4.8.1 Neutral, positive, and negative hyperconjugation 314
- 4.8.2 Hyperconjugation in cyclopentadienes 315
- 4.8.3 Nonplanarity of bicyclo[2.2.1]hept-2-ene double bond 315
- 4.8.4 Conformation of unsaturated and saturated systems 317
- 4.8.5 Hyperconjugation in radicals 319
- 4.8.6 Hyperconjugation in carbenium ions 320
- 4.8.7 Hyperconjugation in carbanions 320
- 4.8.8 Cyclopropyl vs. cyclobutyl substituent effect 322
- 4.9 Heilbronner Möbius aromatic [*N*]annulenes 324
- 4.10 Conclusion 326

- 5 Pericyclic reactions 339**
- 5.1 Introduction 339
- 5.2 Electrocyclic reactions 340
- 5.2.1 Stereochemistry of thermal cyclobutene-butadiene isomerization: four-electron electrocyclic reactions 340
- 5.2.2 Longuet-Higgins correlation of electronic configurations 342
- 5.2.3 Woodward-Hoffmann simplification 345
- 5.2.4 Aromaticity of transition states in cyclobutene/butadiene electrocyclizations 346
- 5.2.5 Torquoselectivity of cyclobutene electrocyclic reactions 347
- 5.2.6 Nazarov cyclizations 350
- 5.2.7 Thermal openings of three-membered ring systems 354
- 5.2.8 Six-electron electrocyclic reactions 357
- 5.2.9 Eight-electron electrocyclic reactions 360
- 5.3 Cycloadditions and cycloreversions 361
- 5.3.1 Stereoselectivity of thermal [$\pi^2+\pi^2$]-cycloadditions: Longuet-Higgins model 362

- 5.3.2 Woodward–Hoffmann rules for cycloadditions 364
- 5.3.3 Aromaticity of cycloaddition transition structures 366
- 5.3.4 Mechanism of thermal $[\pi^2+\pi^2]$ -cycloadditions and $[\sigma^2+\sigma^2]$ -cycloreversions: 1,4-diradical/zwitterion intermediates or diradicaloid transition structures 368
- 5.3.5 Cycloadditions of allenes 372
- 5.3.6 Cycloadditions of ketenes and keteniminium salts 373
- 5.3.7 Wittig olefination 380
- 5.3.8 Olefinations analogous to the Wittig reaction 384
- 5.3.9 Diels–Alder reaction: concerted and non-concerted mechanisms compete 387
- 5.3.10 Concerted Diels–Alder reactions with synchronous or asynchronous transition states 391
- 5.3.11 Diradicaloid model for transition states of concerted Diels–Alder reactions 392
- 5.3.12 Structural effects on the Diels–Alder reactivity 397
- 5.3.13 Regioselectivity of Diels–Alder reactions 399
- 5.3.14 Stereoselectivity of Diels–Alder reactions: the Alder “endo rule” 406
- 5.3.15 π -Facial selectivity of Diels–Alder reactions 408
- 5.3.16 Examples of hetero-Diels–Alder reactions 411
- 5.3.17 1,3-Dipolar cycloadditions 420
- 5.3.18 Sharpless asymmetric dihydroxylation of alkenes 428
- 5.3.19 Thermal (2+2+2)-cycloadditions 428
- 5.3.20 Nuncatalyzed (4+3)- and (5+2)-cycloadditions 431
- 5.3.21 Thermal higher order ($m+n$)-cycloadditions 434
- 5.4 Cheletropic reactions 437
 - 5.4.1 Cyclopropanation by (2+1)-cheletropic reaction of carbenes 437
 - 5.4.2 Aziridination by (2+1)-cheletropic addition of nitrenes 440
 - 5.4.3 Decarbonylation of cyclic ketones by cheletropic elimination 442
 - 5.4.4 Cheletropic reactions of sulfur dioxide 444
 - 5.4.5 Cheletropic reactions of heavier congeners of carbenes and nitrenes 447
- 5.5 Thermal sigmatropic rearrangements 451
 - 5.5.1 (1,2)-Sigmatropic rearrangement of carbenium ions 451
 - 5.5.2 (1,2)-Sigmatropic rearrangements of radicals 456
 - 5.5.3 (1,2)-Sigmatropic rearrangements of organoalkali compounds 459
 - 5.5.4 (1,3)-Sigmatropic rearrangements 462
 - 5.5.5 (1,4)-Sigmatropic rearrangements 465
 - 5.5.6 (1,5)-Sigmatropic rearrangements 467
 - 5.5.7 (1,7)-Sigmatropic rearrangements 469
 - 5.5.8 (2,3)-Sigmatropic rearrangements 470
 - 5.5.9 (3,3)-Sigmatropic rearrangements 476
 - 5.5.9.1 Fischer indole synthesis (3,4-diaza-Cope rearrangement) 476
 - 5.5.9.2 Claisen rearrangement and its variants (3-oxa-Cope rearrangements) 476
 - 5.5.9.3 Aza-Claisen rearrangements (3-aza-Cope rearrangements) 481
 - 5.5.9.4 Overman rearrangement (1-oxa-3-aza-Cope rearrangement) 483
 - 5.5.9.5 Thia-Claisen rearrangement (3-thia-Cope rearrangement) 484
 - 5.5.9.6 Cope rearrangements 484
 - 5.5.9.7 Facile anionic oxy-Cope rearrangements 489
 - 5.5.9.8 Acetylenic Cope rearrangements 491
 - 5.5.9.9 Other hetero-Cope rearrangements 492
- 5.6 Dyotropic rearrangements and transfers 495
 - 5.6.1 Type I dyotropic rearrangements 496
 - 5.6.2 Alkene and alkyne reductions with diimide 498
 - 5.6.3 Type II dyotropic rearrangements 499
- 5.7 Ene-reactions and related reactions 500
 - 5.7.1 Thermal Alder ene-reactions 501
 - 5.7.2 Carbonyl ene-reactions 504
 - 5.7.3 Other hetero-ene reactions involving hydrogen transfers 504

5.7.4	Metallo-ene-reactions	508
5.7.5	Carbonyl allylation with allylmetals: carbonyl metallo-ene-reactions	509
5.7.6	Aldol reaction	514
5.7.7	Reactions of metal enolates with carbonyl compounds	518

 - 7.8.4 Hydrogenation of alkynes into alkenes 897
 - 7.8.5 Catalytic hydrogenation of arenes and heteroarenes 899
 - 7.8.6 Catalytic hydrogenation of ketones and aldehydes 899
 - 7.8.7 Catalytic hydrogenation of carboxylic acids, their esters and amides 902
 - 7.8.8 Hydrogenation of carbon dioxide 903
 - 7.8.9 Catalytic hydrogenation of nitriles and imines 904
 - 7.8.10 Catalytic hydrogenolysis of C—halogen and C—chalcogen bonds 906
- 7.9 Catalytic reactions of silanes 906
 - 7.9.1 Reduction of alkyl halides 906
 - 7.9.2 Reduction of carbonyl compounds 907
 - 7.9.3 Alkene hydrosilylation 909
- 7.10 Hydrogenolysis of C—C single bonds 910
- 7.11 Catalytic oxidations with molecular oxygen 911
 - 7.11.1 Heme-dependent monooxygenase oxidations 912
 - 7.11.2 Chemical aerobic C—H oxidations 914
 - 7.11.3 Reductive activation of molecular oxygen 917
 - 7.11.4 Oxidation of alcohols with molecular oxygen 918
 - 7.11.5 Wacker process 920
- 7.12 Catalyzed nucleophilic aromatic substitutions 922
 - 7.12.1 Ullmann–Goldberg reactions 923
 - 7.12.2 Buchwald–Hartwig reactions 926
- References 927

- 8 Transition-metal-catalyzed C—C bond forming reactions 1029**
 - 8.1 Introduction 1029
 - 8.2 Organic compounds from carbon monoxide 1030
 - 8.2.1 Fischer–Tropsch reactions 1030
 - 8.2.2 Carbonylation of methanol 1032
 - 8.2.3 Hydroformylation of alkenes 1034
 - 8.2.4 Silylformylation 1039
 - 8.2.5 Reppe carbonylations 1041

- 8.2.6 Pd(II)-mediated oxidative carbonylations 1042
- 8.2.7 Pauson–Khand reaction 1043
- 8.2.8 Carbonylation of halides: synthesis of carboxylic derivatives 1047
- 8.2.9 Reductive carbonylation of halides: synthesis of carbaldehydes 1049
- 8.2.10 Carbonylation of epoxides and aziridines 1050
- 8.2.11 Hydroformylation and silylformylation of epoxides 1053
- 8.3 Direct hydrocarbation of unsaturated compounds 1053
 - 8.3.1 Hydroalkylation of alkenes: alkylation of alkanes 1054
 - 8.3.2 Alder ene-reaction of unactivated alkenes and alkynes 1056
 - 8.3.3 Hydroarylation of alkenes: alkylation of arenes and heteroarenes 1057
 - 8.3.4 Hydroarylation of alkynes: alkenylation of arenes and heteroarenes 1060
 - 8.3.5 Hydroarylation of carbon-heteroatom multiple bonds 1062
 - 8.3.6 Hydroalkenylation of alkynes, alkenes, and carbonyl compounds 1062
 - 8.3.7 Hydroacylation of alkenes and alkynes 1063
 - 8.3.8 Hydrocyanation of alkenes and alkynes 1066
 - 8.3.9 Direct reductive hydrocarbation of unsaturated compounds 1067
 - 8.3.10 Direct hydrocarbation via transfer hydrogenation 1069
- 8.4 Carbacarbation of unsaturated compounds and cycloadditions 1070
 - 8.4.1 Formal $[\sigma^2+\pi^2]$ -cycloadditions 1072
 - 8.4.2 (2+1)-Cycloadditions 1072
 - 8.4.3 Ohloff–Rautenstrauch cyclopropanation 1077
 - 8.4.4 $[\pi^2+\pi^2]$ -Cycloadditions 1078
 - 8.4.5 (3+1)-Cycloadditions 1080
 - 8.4.6 (3+2)-Cycloadditions 1081
 - 8.4.7 (4+1)-Cycloadditions 1087
 - 8.4.8 (2+2+1)-Cycloadditions 1089
 - 8.4.9 $[\pi^4+\pi^2]$ -Cycloadditions of unactivated cycloaddends 1090
 - 8.4.10 (2+2+2)-Cycloadditions 1096
 - 8.4.11 (3+3)-Cycloadditions 1101
 - 8.4.12 (3+2+1)-Cycloadditions 1102
 - 8.4.13 (4+3)-Cycloadditions 1103
 - 8.4.14 (5+2)-Cycloadditions 1105
 - 8.4.15 (4+4)-Cycloadditions 1108
 - 8.4.16 (4+2+2)-Cycloadditions 1109
 - 8.4.17 (6+2)-Cycloadditions 1110
 - 8.4.18 (2+2+2+2)-Cycloadditions 1111
 - 8.4.19 (5+2+1)-Cycloadditions 1112
 - 8.4.20 (7+1)-Cycloadditions 1112
 - 8.4.21 Further examples of high-order catalyzed cycloadditions 1112
 - 8.4.22 Annulations through catalytic intramolecular hydrometallation 1115
 - 8.4.23 Oxidative annulations 1115
- 8.5 Didehydrogenative C–C-coupling reactions 1116
 - 8.5.1 Glaser–Hay reaction: oxidative alkyne homocoupling 1116
 - 8.5.2 Oxidative C–C cross-coupling reactions 1117
 - 8.5.3 Oxidative aryl/aryl homocoupling reactions 1119
 - 8.5.4 Oxidative aryl/aryl cross-coupling reactions 1121
 - 8.5.5 TEMPO-cocatalyzed oxidative C–C coupling reactions 1122
 - 8.5.6 Oxidative aminoalkylation of alkynes and active C–H moieties 1123
- 8.6 Alkane, alkene, and alkyne metathesis 1124
 - 8.6.1 Alkane metathesis 1125
 - 8.6.2 Alkene metathesis 1126
 - 8.6.3 Enyne metathesis: alkene/alkyne cross-metathesis 1131
 - 8.6.4 Alkyne metathesis 1133
- 8.7 Additions of organometallic reagents 1134

- 8.7.1 Additions of Grignard reagents 1136
- 8.7.2 Additions of alkylzinc reagents 1142
- 8.7.3 Additions of organoaluminum compounds 1143
- 8.7.4 Additions of organoboron, silicium, and zirconium compounds 1145
- 8.8 Displacement reactions 1148
 - 8.8.1 Kharash cross-coupling and Kumada–Tamao–Corriu reaction 1148
 - 8.8.2 Negishi cross-coupling 1154
 - 8.8.3 Stille cross-coupling and carbonylative Stille reaction 1157
 - 8.8.4 Suzuki–Miyaura cross-coupling 1161
 - 8.8.5 Hiyama cross-coupling 1166
 - 8.8.6 Tsuji–Trost reaction: allylic alkylation 1168
 - 8.8.7 Mizoroki–Heck coupling 1171
 - 8.8.8 Sonogashira–Hagihara cross-coupling 1179
 - 8.8.9 Arylation of arenes(heteroarenes) with aryl(heteroaryl) derivatives 1182
 - 8.8.10 α -Arylation of carbonyl compounds and nitriles 1187
 - 8.8.11 Direct arylation and alkynylation of nonactivated C–H bonds in alkyl groups 1189
 - 8.8.12 Direct alkylation of nonactivated C–H bonds in alkyl groups 1190
