Preface *xiii*

Acknowledgements *xv*

1 A Preview of the Subject of the Book *1*

- 1.1 Symmetry Considerations *1*
- 1.2 Ferroic Materials *3*
- 1.3 Laser Optics *6*
- 1.4 Creating the Trinity *8*
- 1.5 Structure of this Book *10*

Part I The Ingredients and Their Combination *11*

2 Symmetry *13*

- 2.1 Describing Interactions in Condensed-Matter Systems *13*
- 2.2 Introduction to Practical Group Theory *15*
- 2.3 Crystals *16*
 - 2.3.1 Types of Symmetry Operations *17*
 - 2.3.2 Combinations of Operations *20*
 - 2.3.3 Nomenclature *20*
- 2.4 Point Groups and Space Groups *21*
 - 2.4.1 Point Groups *21*
 - 2.4.2 Space Groups *24*
- 2.5 From Symmetries to Properties *25*
 - 2.5.1 Deriving the Components of the Property Tensors *25*
 - 2.5.2 Parity of the Property Tensors *25*
 - 2.5.3 Introducing Inhomogeneity *26*
 - 2.5.4 Beyond Group Theory: Particularisation *28*

3 Ferroic Materials *31*

- 3.1 Ferroic Phase Transitions *32*
 - 3.1.1 Landau-Theoretical Description and Order Parameter *33*
 - 3.1.2 First- and Second-Order Phase Transitions *34*

3.1.3	Critical Exponents	36
3.1.4	Domain States and Domains	37
3.1.5	Softness	39
3.2	Ferroic States	41
3.2.1	Conjugate Field and Switchability	41
3.2.2	Hysteresis	42
3.2.3	Curie Temperature	42
3.3	Antiferroic States	43
3.4	Classification of Ferroics	44
3.4.1	Ferromagnetism	46
3.4.2	Ferroelectricity	56
3.4.3	Ferroelasticity	64
3.4.4	Ferrotoroidicity	68
3.4.5	Other Forms of Primary Ferroic Order	76
3.4.6	Higher-Order Ferroics	78
3.4.7	Multiferroics	81
4	Nonlinear Optics	91
4.1	Interaction of Materials with the Electromagnetic Radiation Field	93
4.1.1	Hamilton Operator	93
4.1.2	Multipole Expansion	95
4.2	Wave Equation in Nonlinear Optics	97
4.2.1	Derivation of the Wave Equation with an Extended Source Term	98
4.2.2	General Solution of the Wave Equation	99
4.2.3	Four Solutions of Particular Interest	101
4.3	Microscopic Sources of Nonlinear Optical Effects	103
4.4	Important Nonlinear Optical Processes	107
4.4.1	Two-Photon Sum Frequency Generation	108
4.4.2	Second Harmonic Generation	108
4.4.3	Two-Photon Difference Frequency Generation	109
4.4.4	Optical Parametric Generation	109
4.4.5	Third Harmonic Generation	109
4.5	Nonlinear Spectroscopy of Electronic States	110
4.5.1	Transition Matrix Elements	110
4.5.2	Resonance Behaviour at the Contributing Frequencies	110
4.5.3	Local-Field Corrections	110
4.5.4	Linear Optical Properties at the Contributing Frequencies	111
4.5.5	Phase Matching	111
5	Experimental Aspects	113
5.1	Laser Sources	113
5.1.1	Nanosecond Laser Systems with Optical Parametric Oscillator	114
5.1.2	Femtosecond Laser Systems with Optical Parametric Amplifier	115
5.2	Experimental Set-Ups	116
5.2.1	Spectral Resolution	117

5.2.2	Imaging by Projection	127
5.2.3	Imaging by Scanning	133
5.3	Temporal Resolution	134
6	Nonlinear Optics on Ferroics – An Instructive Example	137
6.1	SHG Contributions from Antiferromagnetic Cr ₂ O ₃	140
6.2	SHG Spectroscopy	146
6.3	Topography on Antiferromagnetic Domains	149
6.4	Magnetic Structure in the Spin-Flop Phase	152

Part II Novel Functionalities 155

7	The Unique Degrees of Freedom of Optical Experiments	157
7.1	Polarisation-Dependent Spectroscopy	158
7.1.1	Basic Methodical Aspects	158
7.1.2	Resonance Enhancement of Signals	159
7.1.3	Sublattice Selectivity	162
7.1.4	Separation of Coexisting Types of Order	164
7.1.5	Spectral Identification of Symmetries	166
7.2	Spatial Resolution – Domains	167
7.2.1	Access to Hidden Domain States	168
7.2.2	Domain Microscopy at Different Resolution	171
7.2.3	Domain Topography Below the Optical Resolution Limit	173
7.2.4	Domain Topography in Three Dimensions	178
7.3	Temporal Resolution – Correlation Dynamics	181
7.3.1	Overview	181
7.3.2	Dynamical Properties of Ferromagnetic Systems	186
7.3.3	Dynamical Processes in Antiferromagnetic Systems	190
7.3.4	Nonlinear Effects in the Few-Terahertz Range	196

8	Theoretical Aspects	201
8.1	Microscopic Sources of SHG in Ferromagnetic Metals	202
8.2	Microscopic Sources of SHG in Antiferromagnetic Insulators	203
8.2.1	Chromium Sesquioxide	203
8.2.2	Hexagonal Manganites	207
8.2.3	Nickel Oxide	210

Part III Materials and Applications 211

9	SHG and Multiferroics with Magnetoelectric Correlations	213
9.1	Type-I Multiferroics – The Hexagonal Manganites	214
9.1.1	Synthesis and Crystal Structure	214
9.1.2	Lattice Trimerisation	215

9.1.3	Antiferromagnetic Order of the Mn ³⁺ Lattice	231
9.1.4	Magnetic Order of the Rare-Earth System	243
9.1.5	Magnetic Sublattice Interactions	247
9.1.6	Magnetoelectric Sublattice Interactions	250
9.1.7	Dynamic Correlations	259
9.2	Type-I Multiferroics – BiFeO ₃	262
9.2.1	Synthesis and Crystal Structure	262
9.2.2	Ferroelectric Order	264
9.2.3	Antiferromagnetic Order	264
9.2.4	Magnetoelectric Coupling Effects	266
9.3	Type-I Multiferroics with Strain-Induced Ferroelectricity	275
9.4	Type-II Multiferroics – MnWO ₄	278
9.4.1	Synthesis and Crystal Structure	278
9.4.2	Multiferroic Order	279
9.4.3	SHG Contributions – Incommensurate SHG	280
9.4.4	Types of Domains	284
9.4.5	Poling Dynamics	287
9.4.6	Multiferroic Domain Walls	289
9.5	Type-II Multiferroics – TbMn ₂ O ₅	291
9.5.1	Synthesis, Crystal Structure, and Magnetic Order	291
9.5.2	Decomposition of Contributions to the Spontaneous Polarisation	292
9.6	Type-II Multiferroics – TbMnO ₃	295
9.6.1	Synthesis, Crystal Structure, and Magnetic Order	295
9.6.2	Domains and Poling	295
9.6.3	Optical Domain Switching	297
9.6.4	Robustness of the Multiferroic State	302
9.7	Type-II Multiferroics with Higher-Order Domain Functionalities	304
9.7.1	Magnetoelectric Inversion of a Domain Pattern	305
9.7.2	Magnetoelectric ‘Teleportation’ of a Domain Pattern	309
10	SHG and Materials with Novel Types of Primary Ferroic Orders	313
10.1	Ferrotoroidics	314
10.1.1	Ferrotoroidal LiCoPO ₄	314
10.1.2	Ferrotoroidics Other than LiCoPO ₄	320
10.1.3	Status of Ferrotoroidicity as Primary Ferroic Order	324
10.2	Ferro-Axial Order – RbFe(MoO ₄) ₂	325
10.2.1	Structure and Phase Transitions	325
10.2.2	Ferroic Nature of the Rotational Transition	326
11	SHG and Oxide Electronics – Thin Films and Heterostructures	329
11.1	Growth Techniques	330
11.1.1	Pulsed-Laser Deposition	331
11.1.2	Molecular Beam Epitaxy	332

11.1.3	Sputter Deposition	332
11.1.4	Metal-Organic Chemical Vapour Deposition	333
11.2	Thin Epitaxial Oxide Films with Magnetic Order	334
11.2.1	Ferrimagnetic Garnets	334
11.2.2	Ferromagnetic Metals	334
11.2.3	EuO – A Ferromagnetic Insulator	336
11.3	Thin Epitaxial Oxide Films with Ferroelectric Order	341
11.3.1	Crystal Structure and Domain Configurations: BiFeO ₃	342
11.3.2	From Domains to Domain Walls: SrMnO ₃	345
11.3.3	Internal Structure of Domain Walls: PbZr _x Ti _{1-x} O ₃	347
11.3.4	From Domain Walls to Interfaces: LaAlO ₃ on SrTiO ₃	350
11.4	Poling Dynamics in Ferroelectric Thin Films	357
11.5	Growth Dynamics in Oxide Electronics by In Situ SHG Probing	361
11.5.1	Early ISHG Experiments	362
11.5.2	Experimental Set-Up for ISHG	363
11.5.3	Emergence of Ferroelectric Order in a Single Film	365
11.5.4	From Single Films to Multi-Layer Heterostructure	367
11.5.5	From Multi-Layer Heterostructures to Symmetry Engineering	368
11.5.6	Growth Dynamics – Interaction Between Materials	370
11.5.7	Growth Dynamics – Interaction Between Interfaces	372
12	Nonlinear Optics on Ordered States Beyond Ferroics	375
12.1	Superconductors	375
12.2	Metamaterials – Photonic Crystals	379
12.2.1	Optical Properties	380
12.2.2	Ferroic Properties	380
12.2.3	Quasicrystalline Metamaterials	382
12.3	Topological Insulators	384
Part IV Epilogue 387		
13	A Retrospect of the Subject of the Book	389
