Preface *ix*

1	Introduction	<i>1</i>
1.1	General Introduction	<i>1</i>
1.2	Discovery of Diarylethene Molecular Photoswitches	<i>4</i>
	References	<i>12</i>
2	Reaction Mechanism	<i>15</i>
2.1	Basic Concepts	<i>15</i>
2.2	Theoretical Study	<i>20</i>
2.3	Reaction Dynamics	<i>22</i>
2.3.1	Cyclization Reaction	<i>22</i>
2.3.2	Cycloreversion Reaction	<i>27</i>
	References	<i>29</i>
3	Photoswitching Performance	<i>31</i>
3.1	Quantum Yield	<i>31</i>
3.1.1	Photocyclization Quantum Yield	<i>31</i>
3.1.2	Solvent Effect on Cyclization Quantum Yield	<i>42</i>
3.1.3	Photocycloreversion Quantum Yield	<i>44</i>
3.2	Thermal Stability	<i>49</i>
3.3	Fatigue Resistance	<i>53</i>
3.4	Fluorescence Property	<i>60</i>
3.4.1	Turn-Off Mode Photoswitching	<i>61</i>
3.4.2	Turn-On Mode Photoswitching	<i>76</i>
3.5	Chiral Property	<i>80</i>
	References	<i>86</i>
4	Photoswitchable Crystals	<i>93</i>
4.1	Dichroism	<i>93</i>
4.2	X-Ray Crystallographic Analysis	<i>97</i>
4.3	Quantum Yield	<i>101</i>
4.4	Multicolored Systems and Nano-Layered Periodic Structures	<i>106</i>

- 4.5 Fluorescent Crystals 108
- 4.6 Photomechanical Response 110
 - 4.6.1 Surface Morphology Change 112
 - 4.6.2 Reversible Shape Change 113
 - 4.6.3 Bending Response of Mixed Crystals 116
- References 121

- 5 Memory 125**
 - 5.1 Single-Molecule Memory 125
 - 5.2 Near-Field Optical Memory 128
 - 5.3 Three-Dimensional Optical Memory 130
 - 5.4 Readout Using Infrared Absorption, Raman Scattering, and Refractive Index Changes 132
- References 134

- 6 Switches 137**
 - 6.1 Single-Molecule Conductance Photoswitch 137
 - 6.2 Optical Switch Based on Refractive Index Change 141
 - 6.3 Magnetism 141
- References 146

- 7 Surface Properties 149**
 - 7.1 Surface Wettability 149
 - 7.2 Selective Metal Deposition 151
 - 7.3 Subwavelength Nanopatterning 154
- References 155

- 8 Polymers and Liquid Crystals 157**
 - 8.1 Polymers 157
 - 8.2 Liquid Crystals 175
- References 178

- 9 Applications 183**
 - 9.1 Organic Field-Effect Transistors (OFETs) 183
 - 9.2 Metal Organic Frameworks (MOFs) 185
 - 9.3 Super-Resolution Fluorescence Microscopy 188
 - 9.3.1 Control of Cycloreversion Quantum Yield 189
 - 9.3.2 Fatigue Resistance 191
 - 9.3.3 Photoswitching with Single-Wavelength Visible Light 192
 - 9.3.4 Super-Resolution Bioimaging 195
 - 9.4 Chemical Reactivity Control 197
 - 9.5 Biological Activity 201
 - 9.6 Color Dosimeters 204
- References 209

A	Synthesis Procedures of Typical Diarylethenes	213
A.1	1,2-Bis(2,4-dimethyl-5-phenyl-3-thienyl)perfluorocyclopentene	213
A.2	1,2-Bis(2-ethyl-6-phenyl-1-benzothiophene-1,1-dioxide-3-yl)- perfluorocyclopentene	215
	References	217
	Index	219
