Acknowledgements *xiii*

Part I Theories 1

1 Single Polymer Chain 3

Takamasa Sakai

1.1 General Features 3

1.1.1 Conformation of a Polymer Chain 3

1.1.2 Coarse-Graining of a Polymer Chain 4

1.1.3 Free Rotation Model 5

1.2 Statistics of a Single Polymer Chain 7

1.2.1 End-to-End Distance of a 1D Random Walk 7

1.2.2 End-to-End Distance of a 3D Random Walk 10

1.2.3 Force Needed to Stretch an Ideal Chain 12

1.3 Scaling of a Single Polymer Chain 15

1.3.1 Stretching of an Ideal Chain 17

1.3.2 Real Chains 18

1.3.3 Stretching of a Real Chain 19

Column 1: Miscible Gels and Immiscible Gels 21

References 22

2 Polymer Solution 23

Takamasa Sakai

2.1 Polymer Chains in Solution 23

2.1.1 Chain Swelling in a Good Solvent 23

2.1.2 Existing Conditions of an Ideal Chain and a Real Chain 25

2.2 Effect of Concentration on the Polymer Conformation 26

2.2.1 Overlapping Concentration 26

2.2.2 Semidilute Solution 28

2.2.3 Blobs in Semidilute Solution 29

2.3 Osmotic Pressure of a Polymer Solution 32

2.3.1 Entropy Change in Mixing 33

2.3.2	Enthalpy Change in Mixing	35
2.3.3	Basic Equation of Osmotic Pressure	36
2.3.4	Phase Separation of the Polymer Solution	37
2.3.5	Scaling of Osmotic Pressure	40
	Column 2: Blob Size of a Polymer Gel	42
	References	43
3	Definition of Polymer Gels and Rubber Elasticity	45
	<i>Takamasa Sakai</i>	
3.1	Elasticity of Gels	45
3.2	Definition of Polymer Gels	46
3.2.1	Criterion for Gelation by Rheology	47
3.2.2	Criterion for Gelation by Scattering	48
3.3	Mesh Size of a Polymer Gel	49
3.4	Elastic Modulus	51
3.4.1	Affine Network Model	51
3.4.2	Phantom Network Model	54
3.5	Network Strands and Crosslinks	60
3.5.1	Percolate Network Model	62
3.5.2	Bethe Approximation	63
3.6	Topological Interaction	67
3.7	Sol–Gel Transition	69
3.7.1	Gelation Threshold of Bethe Approximation	69
3.7.2	Gelation Threshold from the Percolation Model	70
3.8	Heterogeneity of Polymer Gels	71
	Column 3: Elastic Deformation and Plastic Deformation	73
	References	74
4	Swelling and Deswelling	77
	<i>Takamasa Sakai</i>	
4.1	Changes in the Elastic Modulus Due to Swelling/Deswelling	77
4.1.1	Statistical Model for Networks Consisting of Ideal Chains	78
4.1.2	Scaling for Networks Consisting of Nonideal Chains	79
4.1.3	Scaling for Highly Deswollen Networks	82
4.2	Equilibrium Swelling	85
4.2.1	Scaling Prediction of the Equilibrium Swelling	86
4.2.2	Statistical Mechanics of Equilibrium Swelling	87
4.3	Volume Phase Transition	91
4.3.1	Electrically Neutral Gels	91
4.3.2	Electrically Charged Gels	94
4.4	Swelling/Shrinking Kinetics	95
4.5	Degradation of Polymer Gels	102
4.5.1	Degradation by Cleavage of Specific Bonds	102

4.5.2	Degradation by Cleavage of Nonspecific Bonds	104
	Column 4: Diffusions of Polymer Network During Swelling	105
	References	106
5	Deformation and Fracture	109
	<i>Takuya Katashima and Takamasa Sakai</i>	
5.1	Description of Deformation	109
5.1.1	Displacement Vector	109
5.1.2	Strain Tensor	110
5.1.2.1	Normal Strain	110
5.1.2.2	Shear Strain	111
5.1.3	Principal Direction and Strain	113
5.2	Phenomenological Description of the Strain Energy Density Function	115
5.2.1	Estimation of the Strain Energy Density Function	116
5.3	Molecular Models for the Strain Energy Density Function	120
5.3.1	Neo-Hookean Model	120
5.3.2	Inverse Langevin Model	121
5.4	Scaling for Large Deformation	125
5.5	Fracture Behavior of Polymer Gels	126
5.5.1	Griffith Model	127
5.5.2	Lake–Thomas Model	128
5.6	Mesh Size Estimated from Elastic Modulus and Finite Extensibility	130
	Column 5: Linear Viscoelasticity and Nonlinear Viscoelasticity	134
	References	134
6	Mass Transport in Polymer Gels	137
	<i>Xiang Li and Takamasa Sakai</i>	
6.1	Thermal Motion and Brownian Motion	137
6.1.1	Diffusion Coefficient and Relaxation Time	138
6.1.2	Diffusion and Migration	139
6.2	Diffusion in Dilute Polymer Solutions	139
6.2.1	Diffusion of a Hard Sphere	139
6.2.2	Rouse Model	140
6.2.3	Zimm Model	141
6.3	Diffusion in Semidilute Polymer Solutions and Polymer Gels	142
6.3.1	Obstruction Model	142
6.3.2	Hydrodynamic Model	144
6.3.3	Free Volume Model	145
6.3.4	Reptation Model	146
6.3.5	Entropic Trapping Model	147
	Column 6: Effects of Mesh Sizes on Mass Transport	149
	References	149

	Part II Experiments	151
7	Tetra Gel as a Near-Ideal Polymer Network	153
	<i>Takamasa Sakai</i>	
7.1	Ideal Polymer Network	153
7.2	Tetra-PEG Gel	155
7.3	Structure Tuning of Tetra-PEG Gels	155
	References	158
8	Sol-Gel Transition	161
	<i>Takamasa Sakai</i>	
8.1	Determination of Sol–Gel Transition by Rheometry	161
8.2	Phase Diagram	161
8.3	Fractal Dimension at the Critical Point	163
8.4	Critical Behavior of Elastic Modulus	165
8.5	Reaction Kinetics of a Gelling System	166
8.5.1	Hydrolysis Kinetics of Tetra-PEG–OSu	167
8.5.2	Gelation Kinetics of Tetra-PEG Gel	167
	References	169
9	Structural Analysis by Light and Neutron Scattering	173
	<i>Takamasa Sakai and Xiang Li</i>	
9.1	Scattering Curves of Tetra-PEG Gels	173
9.2	Scattering Curves of Stretched Tetra-PEG Gels	176
	References	177
10	Elastic Modulus	179
	<i>Takamasa Sakai and Yuki Yoshikawa</i>	
10.1	Effect of Connectivity	179
10.2	Effect of the Polymer Concentration and Network Strand Length	180
	References	182
11	Large Deformation	183
	<i>Takamasa Sakai and Takuya Katashima</i>	
11.1	Estimation of Strain Energy Density Function	183
11.1.1	Applicability of Neo-Hookean Model	184
11.1.2	Finite Extensibility Effect	185
11.1.3	Coupling Between Different Principal Axes	186
11.1.4	Extended Gent Model	187
11.2	Cross-Coupling	189
11.2.1	Effects of the Fraction of Elastically Effective and Ineffective Chains	190
11.2.2	Effects of Polymer Volume Fraction and Network Strand Length	191
11.2.3	Effect of the Fraction of Guest Chains	193
11.2.4	Conjecture on Origin of Cross-Coupling	196
11.3	Stretchability in Uniaxial Stretching	196
11.3.1	Kuhn Model	197

11.3.2	Effect of Connectivity	197
11.3.3	Effect of Polymer Concentration and Network Strand Length	198
11.3.4	Semiempirical Model Based on Experiments	200
	References	201
12	Fracture	205
	<i>Takamasa Sakai and Takeshi Fujiyabu</i>	
12.1	Estimation of Fracture Energy	205
12.2	Conversion-Tuned Tetra-PEG Gels	207
12.3	Effects of Network Concentration and Strand Length	208
12.4	Bimodal Tetra-PEG Gels	209
12.5	Summary	210
	References	211
13	Mass Transport	213
	<i>Takamasa Sakai and Takeshi Fujiyabu</i>	
13.1	Diffusion of Water Molecules	213
13.1.1	Estimation of Diffusion Coefficient of Water Molecules	213
13.1.2	Effect of Structural Parameters	214
13.1.3	Applicability of Theoretical Models	215
13.1.4	Effect of Correlation Length on Diffusion	216
13.2	Migration of Water Molecules in Hydrogels	217
13.2.1	Water Permeation Through Hydrogel	217
13.2.2	Effect of Structural Parameters on Friction Coefficient	219
13.2.3	Effect of Correlation Length on Friction Coefficient	220
13.3	Electro-Osmotic Flow in Electrically Charged Gels	221
13.3.1	Electro-Osmosis in an Electrically Balanced System	221
13.3.2	Electro-Osmosis in an Electrically Imbalanced System	222
13.3.3	Sum Rule of Electro-Osmotic Flow and Electrophoretic Motion	224
13.4	Migration of Small Double-Stranded DNAs	225
13.4.1	Electrophoresis of dsDNA in Tetra-PEG Gels and Solutions	225
13.4.2	Semiempirical Model	226
13.4.3	Effect of Correlation Length on Electrophoretic Mobility	228
13.4.4	Interaction Between Elastic Blobs and Contour of dsDNA	229
13.5	Migration of Large Double-Stranded DNAs	229
13.5.1	Electrophoresis of Large dsDNA in Tetra-PEG Gels and Solutions	230
13.5.2	Transition of the Migration Mechanism	231
	References	233
14	Osmotic Pressure	235
	<i>Takamasa Sakai</i>	
14.1	Osmotic Pressure of Gels and Prepolymer Solutions	235
14.2	Change in Osmotic Pressure During Gelation	235
14.3	c^* Theorem at the Gelation Threshold	237
	References	239

15	Swelling	241
	<i>Takamasa Sakai and Takeshi Fujiyabu</i>	
15.1	Elastic Modulus of Swollen and Highly Deswollen Gels	241
15.2	Equilibrium Swelling	243
15.3	Swelling Kinetics	244
15.3.1	Examination of Swelling Equation	244
15.3.2	Cooperative Diffusion Coefficient	245
	References	246
16	Degradation	249
	<i>Takamasa Sakai and Takeshi Fujiyabu</i>	
16.1	Cleavage of a Specific Site	249
16.2	Cleavage of Nonspecific Sites	253
16.2.1	Initial Swelling Equilibrium	254
16.2.2	Degradation Behavior of Tetra-PEG Gels	254
16.2.3	A Model for Degradation	255
16.2.4	Estimation of Degradation Rate Constants	257
	References	258
17	Control Over Swelling of Injectable Gel	261
	<i>Takamasa Sakai and Takeshi Fujiyabu</i>	
17.1	Nonswellable Gels	261
17.2	Nonosmotic Gel	265
17.3	Oligo-Tetra-PEG Gel	269
	References	275
	Index	277
