Foreword xv

Preface xix

1	Introduction to the Chemistry of Arynes	1
	<i>Tony Roy, Avishek Guin, and Akkattu T. Biju</i>	
1.1	Introduction	1
1.2	History of Arynes	1
1.3	Characterization of the Aryne Intermediates	3
1.4	<i>Ortho</i> -Arynes with Substitution	5
1.5	<i>Ortho</i> -Arynes of Heterocycles	6
1.6	Other Arynes	7
1.7	Methods of Aryne Generation	9
1.7.1	Selected Methods of Aryne Generation	9
1.7.1.1	Deprotonation of Aryl Halides	9
1.7.1.2	Metal–Halogen Exchange/Elimination	10
1.7.1.3	From Anthranilic Acids	10
1.7.1.4	Fragmentation of Amino Benzotriazoles	10
1.7.1.5	From Phenyl(2-(trimethylsilyl)phenyl)iodonium Triflate	10
1.7.1.6	Using Hexadehydro Diels–Alder (HDDA) Reaction	11
1.7.1.7	From <i>ortho</i> -Borylaryl Triflates	11
1.7.1.8	Pd(II)-Catalyzed C–H Activation Strategy Starting from Benzoic Acids	11
1.7.1.9	via Grob Fragmentation	12
1.7.2	Kobayashi’s Fluoride-Induced Aryne Generation	12
1.8	Possible Reactivity Modes of Arynes	13
1.8.1	Pericyclic Reactions	14
1.8.2	Arylation Reactions	17
1.8.3	Insertion Reactions	17
1.8.4	Transition-Metal-Catalyzed Reactions	18
1.8.5	Multicomponent Couplings (MCCs)	18
1.8.6	Molecular Rearrangements	18
1.9	Domino Aryne Generation	19
1.10	Arynes for the Synthesis of Large Polycyclic Aromatic Compounds	19

1.11	Arynes in Natural Product Synthesis	20
1.12	Concluding Remarks	21
	References	21
2	Aryne Cycloadditions for the Synthesis of Functional Polyarenes	27
	<i>Fátima García, Diego Peña, Dolores Pérez, and Enrique Guitián</i>	
2.1	Introduction	27
2.2	Aryne Cycloaddition Reactions: General Considerations	29
2.2.1	[4+2] Aryne Cycloadditions	29
2.2.2	[2+2] Aryne Cycloadditions	30
2.2.3	[2+2+2] Aryne Cycloadditions	31
2.3	Aryne-Mediated Synthesis of Functional Polyarenes	32
2.3.1	Synthesis of Acenes	32
2.3.2	Synthesis of Perylene Derivatives	43
2.3.3	Synthesis of Triptycenes	48
2.3.4	Synthesis of π -Extended Starphenes or Angular PAHs	48
2.3.5	Synthesis of Helicenes	54
2.3.6	Functionalization of Carbon Nanostructures	58
	References	63
3	Dipolar Cycloaddition Reactions of Arynes and Related Chemistry	69
	<i>Pan Li, Jingjing Zhao, and Feng Shi</i>	
3.1	Introduction	69
3.2	1,3-Dipolar Cycloaddition Reactions of Arynes	70
3.2.1	[3+2] Dipolar Cycloaddition Reactions of Arynes with Linear 1,3-Dipoles	72
3.2.1.1	Reactions with Diazo Compounds	72
3.2.1.2	Reactions of Arynes with Azides	75
3.2.1.3	Reactions of Arynes with Nitrile Oxides	79
3.2.1.4	Reactions of Arynes with Nitrile Imines	80
3.2.1.5	Reactions of Arynes with Nitrones	80
3.2.1.6	Reactions of Arynes with Azomethine Imines and Ylides	83
3.2.1.7	Reactions of Arynes with Pyridinium <i>N</i> -Oxides	85
3.2.1.8	Reactions of Arynes with Pyridinium <i>N</i> -Imides	87
3.2.1.9	Reactions of Arynes with Pyridinium Ylides	89
3.2.2	[3+2] Dipolar Cycloaddition Reactions of Arynes with Cyclic 1,3-Dipoles	90
3.2.2.1	Reactions of Arynes with Sydnones	90
3.2.2.2	Reactions of Arynes with Münchnones	92
3.3	Other [n+2] Dipolar Cycloaddition Reactions of Arynes	92
3.3.1	Cycloaddition with Other Dipoles	92
3.3.2	Cycloaddition of Extended Scope of Arynes	95
3.4	Formal Cycloaddition Reactions of Arynes	97

- 3.4.1 Formal Cycloaddition with N–C–C Systems Forming Indole/Indoline/Oxyindole Scaffolds 97
- 3.4.2 Formal Cycloaddition with Hydrazone-Derived N–N–C Systems 99
- 3.4.3 Formal Cycloaddition and with Sulfur-Containing Substrates 102
- 3.5 Summary 104
- List of Abbreviations 104
- References 104

- 4 Recent Insertion Reactions of Aryne Intermediates 111**
Suguru Yoshida and Takamitsu Hosoya
- 4.1 Introduction 111
- 4.2 Amination and Related Transformations 111
 - 4.2.1 Transformations Involving the Formation of C–N and C–H Bonds 111
 - 4.2.2 Transformations Involving the Formation of C–N and C–Mg Bonds 115
 - 4.2.3 Transformations Involving the Formation of C–N and C–C Bonds 116
 - 4.2.4 Transformations Involving the Formation of C–N and C–S, C–P, C–Cl, or C–Si Bonds 118
- 4.3 Transformations Involving Bond Formation with Nucleophilic Carbons 121
 - 4.3.1 Transformations Involving Carbometalation 121
 - 4.3.2 Benzocyclobutene Synthesis by [2+2] Cycloaddition 122
 - 4.3.3 Acylalkylations and Related Transformations 124
 - 4.3.4 Transformations Involving C–C and C–H Bond Formations 128
- 4.4 Etherification and Related Transformations 129
- 4.5 Sulfanylation and Related Transformations 133
 - 4.5.1 Hydrosulfanylation of Arynes 133
 - 4.5.2 Transformations Involving C–S and C–C Bond Formations 135
 - 4.5.3 Other Transformations Involving C–S and C–X Bond Formations 136
- 4.6 Transformations Involving Bond Formation with Other Heteroatom Nucleophiles 140
 - 4.6.1 Transformations Involving C–P Bond Formation 140
 - 4.6.2 Transformations Involving C–B, C–I, or C–Cl Bond Formations 142
- 4.7 Conclusions 142
- References 144

- 5 Multicomponent Reactions Involving Arynes and Related Chemistry 149**
Hiroto Yoshida
- 5.1 Introduction 149
- 5.2 Classification of Multicomponent Reactions 150
- 5.3 Carbon Nucleophile–Based Multicomponent Reactions 150
 - 5.3.1 Isocyanide 150

5.3.2	Active Methylene Compounds	153
5.4	Nitrogen Nucleophile-Based Multicomponent Reactions	153
5.4.1	Amine	153
5.4.2	Imine	159
5.4.3	<i>N</i> -Heteroarene	163
5.4.4	Diazene	164
5.4.5	Nitrite	165
5.5	Oxygen Nucleophile-Based Multicomponent Reactions	165
5.5.1	Dimethylformamide	165
5.5.2	Sulfoxide	169
5.5.3	Cyclic Ether	172
5.5.4	Trifluoromethoxide	173
5.6	Phosphorus Nucleophile-Based Multicomponent Reactions	174
5.7	Sulfur Nucleophile-Based Multicomponent Reactions	176
5.8	Halogen Nucleophile-Based Multicomponent Reactions	177
5.9	Miscellaneous	179
5.10	Conclusive Remarks	179
	References	180
6	Transition-Metal-Catalyzed Reactions Involving Arynes and Related Chemistry	183
	<i>Kanniyappan Parthasarathy, Jayachandran Jayakumar, Masilamani Jeganmohan, and Chien-Hong Cheng</i>	
6.1	Introduction	183
6.2	Metal-Catalyzed Cyclotrimerization and Cocyclization of Arynes	184
6.2.1	Palladium-Catalyzed Cyclotrimerization and Cocyclization with Arynes	184
6.2.2	Ni-Catalyzed Cyclotrimerization and Cocyclization with Benzynes	193
6.2.3	Au-Catalyzed Cyclotrimerization of Arynes	197
6.2.4	Au-Catalyzed [4+2] Cycloaddition of <i>o</i> -Alkynyl(oxo)benzenes with Arynes	198
6.3	Metal-Catalyzed Annulation with Arynes via C—H and N—H Bond Activation	201
6.3.1	Palladium-Catalyzed Carbocyclization Reaction by C—H Activation	201
6.3.2	Palladium-Catalyzed Arynes in C—X Annulations (X = N, O)	215
6.3.3	Ni-Catalyzed C—N Annulations by Denitrogenative Process	222
6.3.4	Cu-Catalyzed C—H and N—H Annulations of Arynes	224
6.4	Transition-Metal-Catalyzed Three-Component Coupling Reactions	225
6.4.1	Palladium-Catalyzed Three-Component Coupling in Arynes	225
6.4.2	Nickel-Catalyzed Three-Component Coupling in Arynes	230
6.4.3	Copper-Catalyzed Three-Component Coupling in Arynes	230
6.4.4	Silver-Catalyzed Three-Component Coupling in Arynes	239
6.5	Metal-Catalyzed Addition of Metal–Metal (or) Metal–Carbon and C—X bonds into Arynes	240
6.5.1	Palladium-Catalyzed C—Sn Bond Addition to Arynes	240

6.5.2	Palladium-Catalyzed Sn—Sn/Si—Si Bond Addition to Arynes	241
6.5.3	Palladium-Catalyzed Ar—SCN Bond Addition to Arynes	241
6.5.4	Platinum-Catalyzed Boron–Boron Bond Addition to Arynes	243
6.5.5	Copper-Catalyzed B—B Bond Addition to Arynes	244
6.5.6	Copper-Catalyzed Ar—Sn Bond Addition to Arynes	244
6.5.7	Copper-Catalyzed sp C—H Bond Addition to Arynes	247
6.5.8	Gold/Copper-Catalyzed sp C—H Bond Addition to Arynes	247
6.5.9	Copper-Catalyzed C—Br Bond Addition to Arynes	249
6.5.10	Copper-Mediated 1,2-Bis(trifluoromethylation) of Arynes	249
6.5.11	Copper- and Silver-Catalyzed Hexadehydro-Diels–Alder-Cycloaddition of a Triyne (or) Tetrayne (HDDA Arynes) with Terminal Alkynes	251
6.5.12	Copper-Catalyzed P—H Bond Addition to arynes	253
6.6	Metal-Catalyzed CO Insertion Reactions of Arynes	255
6.6.1	Cobalt-, Rhodium-, and Palladium-Catalyzed CO Insertion of Arynes	255
6.7	Metal-Catalyzed [3+2] Cycloaddition of Arynes	260
6.7.1	Silver-Catalyzed [3+2] Cycloaddition of Arynes	260
	Abbreviations	261
	References	262
7	Molecular Rearrangements Triggered by Arynes	267
	<i>Lu Han and Shi-Kai Tian</i>	
7.1	Introduction	267
7.2	Rearrangements Involved in the Monofunctionalization of Arynes	268
7.2.1	Reactions of Arynes with Nitrogen Nucleophiles	268
7.2.2	Reactions of Arynes with Sulfur Nucleophiles	275
7.3	Rearrangements Involved in the 1,2-Difunctionalization of Arynes	278
7.3.1	Formal Insertion of Arynes into Carbon–Carbon Bonds	278
7.3.2	Formal Insertion of Arynes into Carbon–Heteroatom Bonds	281
7.3.3	Formal Insertion of Arynes into Heteroatom–Heteroatom Bonds	288
7.3.4	Vicinal Carbon–Carbon/Carbon–Carbon Bond-Forming Reactions of Arynes	289
7.3.5	Vicinal Carbon–Carbon/Carbon–Heteroatom Bond-Forming Reactions of Arynes	292
7.3.6	Vicinal Carbon–Heteroatom/Carbon–Heteroatom Bond-Forming Reactions of Arynes	302
7.4	Rearrangements Involved in the 1,2,3-Trifunctionalization of Arynes	303
7.5	Rearrangements Involved in the Multicomponent Reactions with Two or More Aryne Molecules	305
7.5.1	Three-Component Reactions with Two Aryne Molecules	305
7.5.2	Four-Component Reactions with Three Benzyne Molecules	308
7.6	Conclusions	309
	References	310

8	New Strategies in Recent Aryne Chemistry	315
	<i>Yang Li</i>	
8.1	Introduction	315
8.2	New Aryne Generation Methods	315
8.2.1	Revisiting ortho-Deprotonative Elimination Protocols	316
8.2.2	Arynes from ortho-Difunctionalized Precursors	320
8.2.3	Catalytic Aryne Generation Methods	323
8.3	Aryne Regioselectivity	326
8.3.1	Steric Effect	327
8.3.2	Electronic Effect	330
8.3.3	Regioselectivity on Small Ring-Fused Arynes	335
8.4	Recent Advances in Aryne Multifunctionalization	336
8.4.1	1,2-Benzdiyne	336
8.4.2	1,3-Benzdiyne	342
8.4.3	1,4-Benzdiyne	345
8.4.4	1,3,5-Benztriyne	349
8.4.5	Benzyne Insertion, C-H Functionalization Cascade	351
8.5	Conclusions	354
	References	354
9	Hetarynes, Cycloalkynes, and Related Intermediates	359
	<i>Avishek Guin, Subrata Bhattacharjee, and Akkattu T. Biju</i>	
9.1	Introduction to Hetarynes	359
9.2	Challenges in Hetarynes	359
9.3	Different Types of Hetarynes	361
9.4	Methods of Preparation	362
9.4.1	2,3-Benzofuranyne Generation	362
9.4.2	2,3-Indolyne Generation	363
9.4.3	2,3-Benzothiophyne Generation	363
9.4.4	3,4-Pyrrolyne Generation	364
9.4.5	2,3-Thiophyne Generation	364
9.4.6	3,4-Thiophyne Generation	364
9.4.7	2,3-Pyridyne Generation	365
9.4.7.1	2,3-Pyridyne from 3-Halopyridine	365
9.4.7.2	2,3-Pyridyne from Dihalide Precursor	366
9.4.7.3	From <i>N</i> -Aminotriazolo-Pyridine	366
9.4.7.4	2,3-Pyridyne from 3-(Trimethylsilyl)pyridin-2-yl Trifluoromethanesulfonate	367
9.4.8	3,4-Pyridyne Generation	367
9.4.8.1	3,4-Pyridyne from Thermolysis of Diazonium Carboxylates	367
9.4.8.2	From 3-Halopyridine	367
9.4.8.3	From Oxidation of <i>N</i> -Aminotriazolo-pyridine	368
9.4.8.4	From 3-Bromo-4-(phenylsulfonyl)pyridine	368
9.4.8.5	From <i>ortho</i> -Trialkylsilyl Pyridyl Triflates	368
9.4.9	4,5-Indolyne Generation	369

- 9.4.9.1 From 5-Bromoindole 369
- 9.4.9.2 From 4-Chloroindole Derivative 369
- 9.4.9.3 From Dibromoindole 369
- 9.4.9.4 From Silyltriflate Precursor 370
- 9.4.10 5,6-Indolyne Generation 370
- 9.4.11 6,7-Indolyne Generation 371
- 9.4.11.1 From Dichloroindole Precursor 371
- 9.4.11.2 Through Proton–lithium Exchange 371
- 9.4.11.3 From 7-Bromoindole Derivative 371
- 9.4.12 Quinolynes Generation 372
- 9.4.12.1 3,4-Quinolynes from Halo Derivatives 372
- 9.4.12.2 5,6- and 7,8-Quinolynes 372
- 9.4.12.3 7,8-Quinolynes from Quinoline 4-Methylbenzenesulfonate Derivatives 372
- 9.4.12.4 3,4-Isoquinolynes Generation 373
- 9.4.13 3,4-Dehydro-1,5-Naphthyridine 373
- 9.4.14 4,5-Pyrimidynes Generation 373
- 9.4.15 Pyridynes-*N*-oxides Generation 374
- 9.4.16 Indolynes Generation 375
- 9.5 Reactions of Hetarynes 375
- 9.5.1 Cycloaddition Reactions 375
- 9.5.2 Nucleophilic Addition Reaction 377
- 9.5.3 Insertion Reaction 379
- 9.6 Applications in Synthesis 380
- 9.6.1 Application of Pyridynes 381
- 9.6.2 Application of Indolynes 382
- 9.7 Introduction to Cycloalkynes 384
- 9.8 History of Cycloalkynes 385
- 9.9 Different Types of Cycloalkynes 387
- 9.10 Methods of Cycloalkyne Generation 387
- 9.10.1 Traditional Methods of Cycloalkyne Generation 388
- 9.10.1.1 Base-Induced 1,2-Elimination 388
- 9.10.1.2 Metal–Halogen Exchange/Elimination 389
- 9.10.1.3 Fragmentation of Aminotriazoles 389
- 9.10.1.4 Fragmentation of Diazirine 390
- 9.10.1.5 Oxidation of 1,2-Bis-hydrazones 390
- 9.10.1.6 Rearrangement of Vinylidenecarbenes 390
- 9.10.2 Fluoride-Induced Cycloalkyne Generation 390
- 9.10.2.1 Generation of 3,4-Oxacyclohexynes 391
- 9.10.2.2 Generation of 2,3-Piperidynes 392
- 9.10.2.3 Generation of 3,4-Piperidynes 392
- 9.10.2.4 Generation of Cyclohexynones 392
- 9.11 Reactions of Cycloalkynes 393
- 9.11.1 Cycloaddition Reactions 393
- 9.11.1.1 Diels–Alder Reaction 393

- 9.11.1.2 [2+2] Cycloaddition 393
- 9.11.1.3 1,3-Dipolar Cycloaddition 394
- 9.11.2 Alkenylation Reactions 395
- 9.11.3 Insertion Reactions 395
- 9.12 Application in Synthesis 396
- 9.13 Strained Cyclic Allenes 396
- 9.13.1 Generation of 1,2-Cycloalkadienes 396
- 9.13.1.1 Base-Induced 1,6-Elimination 397
- 9.13.1.2 Rearrangement of Cyclopropylidenes 398
- 9.13.1.3 Fluoride-Induced Elimination 398
- 9.13.2 Reaction of 1,2-Cycloalkadienes 400
- 9.13.2.1 Diels–Alder Addition 400
- 9.13.2.2 [2+2] Cycloaddition 401
- 9.13.2.3 1,3-Dipolar Cycloaddition 401
- 9.14 Conclusions 402
- References 402

- 10 Hexadehydro Diels–Alder (HDDA) Route to Arynes and Related Chemistry 407**
Rachel N. Voss and Thomas R. Hoye
- 10.1 Introduction 407
- 10.2 History 407
- 10.2.1 Overview of the Family of Dehydro-Diels–Alder Reactions 407
- 10.2.2 First Example of a Tetrahydro-Diels–Alder (TDDA) Reaction 408
- 10.2.3 Earliest Triyne to Benzyne Cycloisomerization (i.e., HDDA) Reactions 409
- 10.2.4 First Minnesota Examples (and the Naming) of the “HDDA” Reaction 411
- 10.3 Early Demonstration of New Modes of Aryne-Trapping Reactivity: Ag- and B-Promoted Carbene Chemistry 412
- 10.4 De novo Construction of Arenes: A New Paradigm for Synthesis of Highly Substituted Benzenoid Natural Products 413
- 10.5 Diradical Mechanism of the HDDA Cycloisomerization of Triyne to Benzyne 414
- 10.6 Additional Contributions from the Lee Group (University of Illinois, Chicago (UIC)) 416
- 10.7 Additional Notable Modes of Aryne Reactivity 416
- 10.7.1 HDDA Benzyne as Dienophiles in Diels–Alder $[4\pi+2\pi]$ Cycloaddition Reactions with Aromatic Dienes 416
- 10.7.2 Trapping of Natural Products: Phenolics 416
- 10.7.3 Trapping of Natural Products: Colchicine and Quinine 420
- 10.8 New Reaction Modes and New Mechanistic Understanding 421
- 10.8.1 Three-Component Reactions 421
- 10.8.2 Dihydrogen Transfer Reactions 422
- 10.8.3 Aromatic ene, Silyl Ether, Thioamide, and Diaziridine Reactions 423

- 10.9 New Routes to Polycyclic, Highly Fused Aromatic Products 424
- 10.9.1 Naphthynes via Double-HDDA, Intramolecular-HDDA, and Highly Functionalized Naphthalenes 424
- 10.9.2 Trapping with Perylene, Domino HDDA, and Tandem HDDA/TDDA 426
- 10.10 One-Offs 427
- 10.10.1 Enal, Formamide, Diselenide, and (N-heterocyclic carbene) NHC-Borane Trapping 427
- 10.10.2 Cu(I)-Catalyzed Hydroalkynylation, Ether vs. Alcohol Competition, Photo-HDDA, and a Kobayashi Benzyne as an HDDA Dinyophile 428
- 10.11 Outgrowths from HDDA Chemistry 428
- 10.11.1 Processes that Outcompete Aryne Formation in Potential HDDA Substrates 428
- 10.11.2 Aza-HDDA Reaction 430
- 10.12 *Guidelines and Practical Issues: Strategic Considerations* 431
- 10.12.1 Complementarity of Classical vs. HDDA Benzyne Chemistries 431
- 10.12.2 Regioselectivity Issues and the Nature of the Nucleophilic Trapping Agent 432
- 10.12.3 Limitations Imposed by Trapping Agents 433
- 10.12.4 Formal Equivalent of the Elusive Bimolecular HDDA Reaction 433
- 10.12.5 Aspects of Substrate Design 434
- 10.12.6 Limitations Imposed by Substituents on the Dinyophile 434
- 10.13 *Guidelines and Practical Issues: Experimental Considerations* 435
- 10.13.1 Pristine Reaction Conditions (and Solvent Choices) 435
- 10.13.2 Reaction Conditions: Tolerance for Water and Oxygen 435
- 10.13.3 Reaction Conditions: Temperature, Pressure, and Alkyne Stability 436
- 10.13.4 Reaction Conditions: Substrate Concentration 437
