Preface *ix*

Nomenclature *xiii*

1	Downstream Processing of Biotechnology Products	1
1.1	Introduction	1
1.2	Bioproducts and Their Contaminants	2
1.2.1	Biomolecular Chemistry and Structure	2
1.2.1.1	Proteins	2
1.2.1.2	Primary Structure	3
1.2.1.3	Secondary Structure	6
1.2.1.4	Tertiary Structure	11
1.2.1.5	Quaternary Structure	11
1.2.1.6	Folding	12
1.2.1.7	Post-translational Modifications	12
1.2.1.8	Oligonucleotides and Polynucleotides	16
1.2.1.9	Endotoxins	18
1.2.2	Biochemical and Biophysical Properties	20
1.2.2.1	UV Absorbance	20
1.2.2.2	Size	22
1.2.2.3	Charge	26
1.2.2.4	Hydrophobicity	28
1.2.2.5	Solubility	31
1.2.2.6	Chemical Stability	33
1.2.2.7	Mechanical Stability	34
1.2.2.8	Viscosity	35
1.2.2.9	Diffusivity	38
1.3	Bioprocesses	40
1.3.1	Expression Systems	40
1.3.2	Host Cell Composition	43
1.3.3	Culture Media	44
1.3.4	Components of the Culture Broth	45
1.3.5	Product Quality Requirements	46
1.3.5.1	Types of Impurities	48
1.3.5.2	Validation	50
1.3.5.3	Purity Requirements	51

1.4	Biosimilars	52
1.5	Role of Chromatography in Downstream Processing	53
1.6	Environmental Impact of Biopharmaceutical Manufacturing	59
	References	60
2	Introduction to Protein Chromatography	63
2.1	Introduction	63
2.2	Basic Principles and Definitions	63
2.3	Modes of Operation	67
2.3.1	Elution Chromatography	69
2.3.2	Frontal Analysis	70
2.3.3	Displacement Chromatography	71
2.3.4	Periodic Countercurrent and Simulated Moving Bed Separators (SMB)	72
2.4	Performance Factors	76
2.5	Separation Performance Metrics	81
2.5.1	Column Efficiency	81
2.5.2	Chromatographic Resolution	84
2.5.3	Dynamic Binding Capacity	86
2.5.4	Scaling Relationships	87
	References	90
3	Chromatography Media	93
3.1	Introduction	93
3.2	Interaction Types and Chemistry	94
3.2.1	Steric Interaction	94
3.2.2	Hydrophobic Interaction	96
3.2.3	Electrostatic Interaction	103
3.2.4	Metal Ion Interaction	106
3.2.5	Biospecific Interaction	108
3.2.6	Mixed Mode Interaction	113
3.3	Buffers and Mobile Phases	117
3.4	Physical Structure and Properties	118
3.4.1	Base Matrices	119
3.4.1.1	Natural Carbohydrate Polymers	121
3.4.1.2	Synthetic Polymers	122
3.4.1.3	Inorganic Materials	123
3.4.2	Porosity, Pore Size, and Surface Area	125
3.4.3	Particle Size and Particle Size Distribution	131
3.4.4	Mechanical and Flow Properties	132
	References	135
4	Laboratory and Process Columns and Equipment	139
4.1	Introduction	139
4.2	Laboratory-Scale Systems	140
4.2.1	Pumps	141

4.2.2	Mixers	145
4.2.3	Monitors	146
4.2.4	System Volumes	149
4.3	Process Columns and Equipment	150
4.3.1	Columns	150
4.3.2	Systems	155
4.3.3	Column Packing	157
	References	158
5	Adsorption Equilibrium	159
5.1	Introduction	159
5.2	Single-Component Systems	161
5.3	Multicomponent Systems	174
5.4	Empirical Correlation of Equilibrium Data	178
5.5	Protein Conformational Changes upon Adsorption	180
	References	180
6	Rate Processes	183
6.1	Introduction	183
6.2	Rate Mechanisms	183
6.2.1	External Mass Transfer	185
6.2.2	Pore Diffusion	188
6.2.3	Solid Diffusion	192
6.2.4	Intraparticle Convection	196
6.2.5	Kinetic Resistance to Binding	201
6.3	Batch Adsorption Kinetics	202
6.3.1	General Rate Equations	204
6.3.2	Analytical Solutions	206
6.3.2.1	External Mass Transfer Control	207
6.3.2.2	Solid Diffusion Control	207
6.3.2.3	Pore Diffusion Control	208
6.3.2.4	Binding Kinetics Control	210
6.3.2.5	LDF Solution	210
6.3.2.6	Combined Mass Transfer Resistances	211
6.3.3	Experimental Verification of Transport Mechanisms	214
6.3.4	Multicomponent Protein Adsorption Kinetics	218
	References	223
7	Dynamics of Chromatography Columns	227
7.1	Introduction	227
7.2	Material Balance Equations	227
7.2.1	Boundary Conditions	229
7.2.2	Dimensionless Equations	230
7.3	Local Equilibrium Dynamics	231
7.4	Multicomponent Systems	244
7.5	Displacement Chromatography	256

7.5.1	Prediction of the Isotachic Train	257
7.5.2	Transient Development	262
	References	263
8	Effects of Dispersion and Rate Processes on Column Performance	265
8.1	Introduction	265
8.2	Empirical Characterization of Column Efficiency	265
8.3	Modeling and Prediction of Column Efficiency	275
8.3.1	Plate Model	275
8.3.2	Rate Models with Linear Isotherms	278
8.3.3	Rate Models with Nonlinear Isotherms	287
8.3.4	Rate Models for Competitive Adsorption Systems	303
	References	308
9	Gradient Elution Chromatography	311
9.1	Introduction	311
9.2	General Theory for Gradient Elution with Linear Isotherms	313
9.3	LGE Relationships and the Iso-resolution Curve in IEC	320
9.3.1	Iso-resolution Curve	329
9.4	LGE Relationships for RPC and HIC	332
9.5	Gradient Elution at High Protein Loads	337
9.6	Separations with pH Gradients	339
	References	351
10	Chromatographic Column Design and Optimization	355
10.1	Introduction	355
10.2	Chromatographic Process Steps and Constraints	357
10.3	Design for Capture	361
10.3.1	Load Step	362
10.3.2	Wash Step	363
10.3.3	Elution Step	364
10.3.4	CIP Step	364
10.3.5	Re-equilibration Step	365
10.3.6	Productivity and Capacity Utilization	365
10.3.7	Continuous Capture	370
10.4	Design for Chromatographic Resolution	375
10.5	SMB Design	382
	References	391
	Index	395
