Preface *xiii*
About the Editors *xv*
Acknowledgments *xvii*

- 1 Introduction 1**
Ji-Jun Zou
Reference 3
- 2 Development History and Basics of Aerospace Fuels 5**
Xiangwen Zhang and Tinghao Jia
- 2.1 Introduction 5
- 2.2 General Properties and Requirements of Aerospace Fuels 6
- 2.2.1 Density 7
- 2.2.2 Low-Temperature Fluidity 8
- 2.2.2.1 Viscosity 8
- 2.2.2.2 Freezing Point 10
- 2.2.3 Thermal Oxidation Stability 11
- 2.2.4 Prediction of Jet Fuel Performance 12
- 2.3 Development of Aerospace Fuels 12
- 2.3.1 Aviation Gas Turbine Engine Fuels (Petroleum Fuels) 12
- 2.3.2 Development of Russian Aerospace Fuels 15
- 2.3.3 High-Thermal-Oxidative-Stability Fuels 15
- 2.3.4 Current Fuels 17
- 2.3.5 Future Fuels 19
- 2.4 High-Energy-Density Fuels 21
- 2.4.1 RJ-4 21
- 2.4.2 RJ-5 and Related Fuels 22
- 2.4.3 JP-10, JP-9, and RJ-7 22
- 2.4.4 Strained and Diamondoid Fuels 25
- 2.4.5 Gelled Fuels 26
- 2.5 Non-petroleum Fuels 27
- 2.5.1 F-T Fuels 28
- 2.5.2 Bio-aviation Fuels 28
- 2.5.3 Perspectives 31

References	33
3	Design and Synthesis of High-Density Polycycloalkane Fuels 39
	<i>Ji-Jun Zou and Chengxiang Shi</i>
3.1	Introduction 39
3.2	Cycloaddition 40
3.2.1	Reaction Pathway 40
3.2.2	Cycloaddition Catalysts 44
3.3	Hydrogenation 50
3.3.1	Hydrogenation of Dicyclopentadiene 50
3.3.1.1	Hydrogenation Mechanism 50
3.3.1.2	Hydrogenation Catalysts 51
3.3.1.3	Hydrogenation Kinetics 54
3.3.2	Hydrogenation of Tricyclopentadiene 67
3.3.2.1	Hydrogenation Mechanism 67
3.3.2.2	Hydrogenation Catalysts 69
3.3.2.3	Hydrogenation Kinetics 70
3.4	Isomerization 74
3.4.1	Isomerization of Tetrahydrodicyclopentadiene 74
3.4.2	Isomerization of Tetrahydrotricyclopentadiene 81
3.5	Other Reactions and Procedures 90
3.5.1	Alternative Isomerization–Hydrogenation Synthesis 90
3.5.2	One-Step Synthesis of <i>exo</i> -Tetrahydrodicyclopentadiene 95
	References 97
4	Design and Synthesis of High-Density Diamondoid Fuels 101
	<i>Lun Pan and Jiawei Xie</i>
4.1	Introduction 101
4.2	Synthesis of Alkyl Diamondoids via Acid-Catalyzed Rearrangement 102
4.3	Synthesis of Alkyl Diamondoids via IL-Catalyzed Rearrangement 112
4.3.1	Rearrangement of Tetrahydrotricyclopentadiene 114
4.3.2	Rearrangement of Tetrahydrodicyclopentadiene 120
4.3.3	Rearrangement of Other Polycycloalkanes 127
4.3.4	Rearrangement of Biomass-Derived Hydrocarbons 134
4.4	Synthesis of Alkyl Diamondoids via Zeolite-Catalyzed Rearrangement 135
4.5	Alkylation and Other Chemical Synthesis Methods 138
4.6	Basic Properties of Alkyl Diamondoids 142
	References 144
5	Design and Synthesis of High-Energy Strained Fuels 149
	<i>Ji-Jun Zou, Junjian Xie, Yakun Liu, and Chi Ma</i>
5.1	Introduction 149
5.2	Quadricyclane Fuel 149
5.2.1	Properties and Synthesis of Quadricyclane 149
5.2.2	Homogeneous Photosensitizers 152

- 5.2.2.1 Triplet Sensitizer 152
- 5.2.2.2 Transition-Metal-Compound-Based Sensitizer 153
- 5.2.3 Heterogeneous Photocatalysis 155
 - 5.2.3.1 Zinc and Cadmium Oxides and Sulfides 155
 - 5.2.3.2 Modified Zeolites 155
 - 5.2.3.3 Metal-Doped TiO₂ 156
 - 5.2.3.4 Ti-Containing MCM-41 161
 - 5.2.3.5 Combination of Metal Doping and Framework Ti Species 164
 - 5.2.3.6 Mechanism of Heterogeneous Photocatalysis 167
- 5.2.4 Utilization of Quadricyclane 168
- 5.3 Cyclopropane Fuel 170
 - 5.3.1 Organometallic Carbenoid-Mediated Cyclopropanation 170
 - 5.3.1.1 Zinc Carbenoid-Mediated Cyclopropanation 171
 - 5.3.1.2 Samarium Carbenoid-Mediated Cyclopropanation 174
 - 5.3.1.3 Lithium Carbenoid-Mediated Cyclopropanation 175
 - 5.3.1.4 Metallic Aluminum Carbenoid-Mediated Cyclopropanation 177
 - 5.3.2 Transition Metal Carbene-Mediated Cyclopropanation 181
 - 5.3.2.1 Diazomethane System 183
 - 5.3.2.2 Copper Catalytic System 185
 - 5.3.2.3 Other Transition Metal Catalyst Systems 187
 - 5.3.3 Other Cyclopropanation Methods 190
 - 5.3.4 Fuel Synthesis and Mechanism 190
 - 5.3.4.1 Cyclopropanation of *endo*-DCPD with Monomeric IZnCH₂I in Gas Phase 193
 - 5.3.4.2 Cyclopropanation of *endo*-DCPD with Monomeric IZnCH₂I in Diethyl Ether Solvent 197
 - 5.3.4.3 Cyclopropanation of *endo*-DCPD with (ICH₂)₂Zn in Diethyl Ether Solvent 201
- 5.4 Spiro and Caged Fuels 202
 - 5.4.1 Spiro-Fuels 203
 - 5.4.2 PCU Monomer, Dimers, and Derivatives 209
 - 5.4.2.1 PCU Monomer 209
 - 5.4.2.2 PCU Dimers 210
 - 5.4.2.3 PCU Derivatives 214
 - 5.4.3 Cubane and Derivatives 218
 - 5.4.4 Other Caged Fuels 222
- References 224

- 6 Design and Synthesis of High-Density Fuels from Biomass 241**
Ji-Jun Zou and Genkuo Nie
- 6.1 Introduction 241
- 6.2 Carbon-Increasing Reaction Strategies 244
 - 6.2.1 Chain and Ring Increasing by Hydroxyalkylation and Alkylation 244
 - 6.2.1.1 Synthesis of Branched Monocyclic Hydrocarbons by Hydroxylalkylation and Alkylation 250
 - 6.2.1.2 Synthesis of Branched Monocyclic Hydrocarbons by Alkylation 252

- 6.2.1.3 Synthesis of Branched Multicyclic Hydrocarbons by Alkylation 254
- 6.2.2 Chain and Ring Increasing by Aldol Condensation 256
 - 6.2.2.1 Synthesis of Branched Monocyclic and Multicyclic Hydrocarbons by Aldol Condensation 256
 - 6.2.2.2 Catalyst Design in the Synthesis of Bi- to Tetra-Five/Six-Membered Ring Hydrocarbons 260
- 6.2.3 Ring Increasing by Diels–Alder Cycloaddition 260
 - 6.2.3.1 Synthesis of Multicyclic Hydrocarbons Using Terpinenes 262
 - 6.2.3.2 Synthesis of Branched Multicyclic Hydrocarbons Using 2-MF 265
 - 6.2.3.3 Synthesis of Branched Monocyclic Hydrocarbons Using Diacetone Alcohol 267
 - 6.2.3.4 Synthesis of JP-10 Using Furfuryl Alcohol 267
- 6.2.4 Ring Increasing by Oligomerization 267
 - 6.2.4.1 Synthesis of Multicyclic Hydrocarbons Using Pinene 269
 - 6.2.4.2 Synthesis of Multicyclic Hydrocarbons Using Cyclenes 271
- 6.2.5 Ring Increasing by Combined Reactions 272
 - 6.2.5.1 Robinson Annulation 272
 - 6.2.5.2 Reductive Coupling 274
 - 6.2.5.3 Guerbet Reaction 275
- 6.2.6 Fused Cycle Constructing by Skeleton Rearrangement 275
- 6.2.7 Integrated Reaction Strategies 277
 - 6.2.7.1 Dual-Bed Catalyst System 278
 - 6.2.7.2 One-Pot Reaction 279
 - 6.2.7.3 Multistep Coupling Reaction 280
 - 6.2.7.4 Cellulose Co-conversion with Polyethylene via Catalytically Combined Processes 283
- References 283

- 7 Design and Synthesis of Nanofluid Fuels 291**
Lun Pan, Xiu-Tian-Feng E, Jinwen Cao, and Kang Xue
 - 7.1 Introduction 291
 - 7.2 Synthesis and Properties of Nanofluid Fuels 292
 - 7.2.1 Single-Step Methods 293
 - 7.2.1.1 Physical Methods 293
 - 7.2.1.2 Chemical Methods 299
 - 7.2.2 Two-Step Methods 303
 - 7.3 Methods to Evaluate Stability of Nanofluids 305
 - 7.3.1 Sedimentation Photograph Capturing 305
 - 7.3.2 Sedimentation Balance Method 305
 - 7.3.3 Centrifugation Method 305
 - 7.3.4 ζ -Potential Measurement 306
 - 7.3.5 UV–Vis Spectrophotometer 308
 - 7.3.6 Light Scattering Method 310
 - 7.3.7 Three-Omega Method 310
 - 7.4 Approaches to Enhance Stability of Nanofluids 310
 - 7.4.1 Mechanical Mixing 311
 - 7.4.2 pH Control 312

- 7.4.3 Surfactants 313
- 7.4.4 Surface Modification 313
- 7.5 Typical High-Energy Nanofluid Fuels 315
- 7.5.1 Boron-Based Nanofluids 315
- 7.5.1.1 Preparation of Stable Boron-in-Jet Fuel Nanofluids 316
- 7.5.1.2 Dispersion of Boron-Based Nanofluids 317
- 7.5.2 Aluminum-Based Nanofluids 320
- 7.6 Physical Properties of Nanofluid Fuels 322
- 7.6.1 Density and Energy 322
- 7.6.2 Viscosity 323
- 7.6.3 Surface tension 328
- 7.6.4 Latent Heat of Vaporization 329
- 7.6.5 Combustion Characteristics 331
- 7.6.6 Evaporation Characteristics 337
- 7.7 Formulation and Synthesis of Gelled Fuels 341
- 7.7.1 Gel Formulation 341
- 7.7.2 Gel Preparation and Gelation Mechanism 346
- 7.8 Rheological Behavior 348
- 7.9 Atomization Behavior 352
- 7.10 Combustion Behavior 356
- References 361

- 8 Design and Synthesis of Green Hypergolic Ionic Liquid Fuels 377**
Xiangwen Zhang and Yong-Chao Zhang
- 8.1 Introduction 377
- 8.2 Development History of Hypergolic Ionic Liquids 378
- 8.3 Physicochemical Properties of Hypergolic Ionic Liquids 379
- 8.3.1 Thermal Properties 379
- 8.3.2 Density 380
- 8.3.3 Viscosity 380
- 8.3.4 Heat of Formation 380
- 8.3.5 Ignition Delay Time 381
- 8.3.6 Specific Impulse 382
- 8.4 Hypergolic Ionic Liquids 382
- 8.4.1 Hypergolic Ionic Liquids Based on Dicyanamide Anions 382
- 8.4.2 Hypergolic Ionic Liquids Based on Nitrocyanamide Anions 397
- 8.4.3 Hypergolic Ionic Liquids Based on Boronium-Based and B—H Bond-Rich Anions 402
- 8.4.4 Hypergolic Ionic Liquids Based on Other Anions 421
- References 431

- 9 Combustion Properties of Fuels and Methods to Improve Them 437**
Lun Pan and Xiu-Tian-Feng E
- 9.1 Introduction 437
- 9.2 Typical Equipment Used in Combustion Experiment 439
- 9.2.1 Rapid Compressor 439

xii | Contents

9.2.2	Shock Tube	441
9.2.2.1	Heated Shock Tube	441
9.2.2.2	Aerosol Shock Tube	441
9.2.3	Hot Plate	446
9.2.4	Laser Ignition	447
9.2.5	Constant-Volume Strand Burner	447
9.3	Combustion and Ignition Characters	450
9.3.1	Ignition Probability	450
9.3.2	Ignition Temperature	450
9.3.3	Ignition Delay Time	453
9.3.4	Combustion Rate	455
9.4	Methods to Enhance Ignition and Combustion	458
9.4.1	Effect of NP Concentration on Ignition and Combustion	458
9.4.2	Effect of Surfactants or Dispersants on Ignition and Combustion	461
9.4.3	Effect of Nanoparticle Characteristics on Ignition and Combustion	462
9.5	Combustion Mechanism of Nanofluid Fuels	464
	References	470
	Index	475
