

## Index

### **a**

- abrasive wear 116–118
- activation energy 137, 138, 140, 160, 311, 340
- adhesive method 53
- adhesive wear 115–116
- Ag coated rGO nanocomposites 203
- agglomerated graphene 132
- alicyclic anhydrides 32
- aliphatic amine 28, 187, 225, 230
- aliphatic anhydrides 32
- alkyl ammonium exchanged clay system 69
- alkyl ammonium ions 65–68, 191
- alumina 261
- alumina nanoparticles 251
- amines 28, 29
- amine-terminated butadiene-acrylonitrile (ATBN) 356
- amino-functionalization 127
- amorphous polymers 299
- anhydrides 32
- aramid fibers 217, 332
- Archimedean principle 100
- aromatic amine 27, 28, 30, 205
- Arrhenius equation 310
- ATR sampling technique 218
- automated fibre placement (AFP) 54, 55
- average rate of heat emission 209

### **b**

- ball milling 65
- Barium titanate 312
- barium titanate 334
- BaTiO<sub>3</sub>/epoxy composites 311
- benzotriazole (BTA) 364
- N,N*-benzyl dimethyl amine (BDMA) 356
- bio-economy 55
- bio-epoxy composites 118
- bisphenol-A epoxy resin 24, 34–36
- bisphenol-F epoxy resin 34, 35
- Boltzmann constant 319
- broadband dielectric spectroscopy (BDS) 300
- bubbles diffusion coefficient 246
- buoyancy method 100

### **c**

- canhydrides 32
- carbon aerogel reinforced composites 274
- carbon aerogels 266, 282, 284
- carbon allotropes 137
- carbon based nano-container 365
- carbon-based nanofillers 263
- carbon-based nanomaterials 266, 291
- Carbon based nanomaterials-epoxy coating 364

- carbon black (CB) content 323  
 carbon fiber composites 207  
 carbon fiber reinforced composite  
     12, 398  
 carbon fiber-reinforced epoxy systems  
     262  
 carbon fiber-reinforced polymer  
     (CFRP)  
         bilinear stress-strain behavior 89  
         carbon nanotubes 147–154  
         energy dissipation 89  
         fatigue 87  
         fiber-contact model 88  
         graphene-based materials  
     154–158  
         with hybrids 158–160  
         mechanical and interfacial  
     properties 89  
         microstructural parameters 88  
         off-axis fiber orientations 88  
         stress-strain curves 89  
         two-point probe method 88  
 carbon fibers (CF) 217, 225, 270,  
     276, 399  
 carbon fibers-epoxy composit 374  
 carbon hollow 363  
 carbon nano fiber nanocomposites  
     loss factor vs. temperature of 193  
     residual weight vs. temperature  
         curves of 195  
     SC-15 epoxy 192–194  
     storage modulus vs. temperature of  
         193  
     thermo gravimetric traces of 195  
 carbon nanofibers 245  
 carbon nanofillers 263  
 carbon nanohorns 288  
 carbon nanomaterials 126  
 carbon nanotube fillers  
     nanocomposites  
 cellulose nanofiber nanocomposites  
     196, 197  
 DGEBA, OMPOSS, and APP  
     nanocomposites 201–202  
 EPIKOTE<sup>TM</sup> resin 862 194  
 carbon nanotubes 288  
     mechanical properties 149  
 carbon nanotubes (CNT) 225, 246  
     grafting CNTs 272  
 carbon nanotubes (CNTs)-SME 356  
 carbon-reinforced polymer  
     composites 263  
 carboxylated SWCNT (SWCNT-c)  
     267  
 carboxylic nitrileoendash butadiene  
     nanorubber (CNBNR) 357  
 carboxyl-terminated acrylonitrile-  
     butadiene copolymers (CTBN)  
     234  
 cation exchange capacity (CEC) 66  
 cellulose 99  
 cellulose nanofibers 109, 262  
 centrifugal casting 48  
 CeO<sub>2</sub>/NiO hybrids 203  
 ceramic fillers 260  
 ceramic nanoparticles 260  
 Charpy impact tests 106  
 chemical recycling 409  
 clay based nanomaterials-epoxy  
     coating 365  
 clay behavior 2  
 clay content 72  
 clay galleries 243  
 clay modification 243  
 clay platelets 242  
 clay-reinforced nanocomposites 261  
 closed-moulding process  
     centrifugal casting 48–49  
     LRTM 44–45  
     pultrusion 46–47  
     reinforced reaction injection  
         moulding 41–42  
     vacuum bag moulding 47–48  
     vacuum infusion process (VIP)  
         45–46  
     VARTM 43  
 combustion process 403  
 combustion residue 403  
 composite materials 97, 350  
 cone calorimeter measurements 209

- conventional thermal curing (TMC) 138  
coupling agent 395  
covalent bonding 142  
critical phenomenon 317  
cross-linked epoxy polymers 70  
CSE-modified epoxy composites 181  
cure reaction analysis 145  
Curie temperature 312  
curing agent 67  
conventional thermal curing (TMC) 138  
dynamic mechanical analysis 138  
hyperbranched polyesters (HBP) 138  
polydopamine (PDA)-MWCNT/epoxy systems 139  
spectroscopy techniques 139  
cycloaliphatic epoxy resin 26, 34, 35
- d**  
D-clay nanocomposites DMA, 189  
DGEBA 7  
4,4'-diaminodiphenylmethane (DDM) 140  
4,4'-diamino diphenyl sulfone (DDS) 223, 354  
diaminodiphenyl sulphone 242  
dicyandiamde 33  
dicyclopentadiene (DCPD) 379  
dielectric permittivity 301, 304  
dielectric reinforcing function (DRF) 315  
dielectric theory 301  
Diels-Alder (DA) 372  
diethylene toluene diamine 207  
differential scanning calorimetry (DSC) 5, 111  
diglycidyl ether of bisphenol-A (DGEBA) 351, 352  
9,10 dihydro-9-oxo-10-phosphaphenanthrene-10-oxide (DOPO) 191  
displacement method 100
- distorted structures 178  
double cantilever beam (DCB) test 374  
3-D printing 53  
DSC 140  
dynamic mechanical analysis (DMA) 3, 113, 127, 206, 284  
dynamic mechanical thermal analysis (DMTA) 65

e-glass fiber 84  
electrically driven heterocatalytic decomposition (EHD) 410  
electric modulus 308  
electromagnetic shielding (EMI) 13, 398  
electron-beam (E-beam) 54, 55  
embedding method 361  
energy dissipation 89  
energy-dissipative processes 290  
energy efficiency, coefficient 339, 340  
epichlorohydrin 25  
Epon 862 199  
Epon nanosuspension 199  
epoxidized natural rubbers (ENR) 373  
epoxy-amine 221  
epoxy anhydride system 223  
epoxy-based composite material (ECM) 349  
applications for 397–400  
DSC analysis 112  
flame retardant properties 399  
impact properties 106–108  
recycling options for 405–410  
safety and environmental issues of 400–405  
tensile properties 104–106  
widespread use of 397  
epoxy based hybrid composites 332  
epoxy-based nanocomposites 263  
epoxy-carbon based nanomaterials composites 358

- epoxy-clay nanocomposites  
evolution of 65–67  
mechanical properties 61  
mechanism of 67–72  
micro-and nanoscale structures 62–65  
reaction-induced phase separation 61  
self-assembly 61  
epoxy composites 265, 290  
carbon nanotube (CNTs) 2  
dielectric properties 9  
dispersion and interfacial adhesion 266–273  
dynamic mechanical analysis 284–288  
epoxy resins 1, 2  
experimental techniques 3–6  
factors 1  
fiber-matrix interaction 218  
fracture surface morphology 273–278  
fracture toughness 281–282  
futuristic processing 52–54  
impact properties 282–284  
lap shear properties 288–289  
manufacturing methods, for  
fabrication 2–3  
manufacturing of  
closed-moulding process 41–49  
open moulding 37–41  
mechanical properties 6–9  
morphological analysis 233  
morphology of 11–12  
nanoparticle filled epoxy  
composites 51–52  
stress-strain properties 278–281  
systems 259  
thermal stability 6  
thermosetting polymers 1  
water/moisture absorption 9–11  
WAXD patterns of 234  
epoxy/conductive filler  
micro-composites 317–325  
nano-composites 325–331  
epoxy cresol novolacs (ECN) 25  
epoxy fillers 260  
epoxy/glass fiber composites  
bis(4-cyanato 3,5-dimethylphenyl)  
naphthyl methane 178–179  
DGEBA 179–182  
DSC cure characteristics 180  
DSC cure curve 180  
jute fiber content 186  
mechanical and thermal behaviour  
of flax 186  
novolac type epoxy and isocyanate  
modified epoxy 182  
and sisal 186  
epoxy-hybrid reinforced system 144  
epoxy/IM-7/MWCNT buckypaper  
micro-nanocomposite 211  
epoxy matrix 70, 260, 265, 276  
epoxy nanocomposites 261, 273  
cure reaction  
DSC and DMA techniques 145  
3D hybrid carbon nanostructures 143  
dynamic-mechanical analysis 130  
EPIKOTE 828LVEL epoxy resin 136  
hyperbranched polyamide 135  
mechanical and thermomechanical  
epoxy nanocomposites 131  
mechanical and thermomechanical

melamine 129  
multi-walled carbon nanotubes 128  
noncovalent functionalized CNTs 128  
1D-2D reinforcements and epoxy  
chains 136  
poly(4-aminostyrene) (PAS) 128  
polystyrene sulfonate (PSS) 128  
pristine carbon nanotubes 130  
thermomechanical improvements 127  
2D carbon nanomaterial 131

- epoxy/nature fiber composites  
 kenaf fiber composites 182–185  
 MH filled kenaf/epoxy hybrid  
 188  
 phormium tenax fiber composites  
 185–186
- epoxy/non-conductive filler  
 micro-composites 306–312  
 nano-composites 312–317
- epoxy novolac resins 35
- epoxy organoclay nanocomposite  
 244
- epoxy phenol novolacs (EPN)  
 25
- epoxy-reduced graphene oxide  
 (RGO) 354
- epoxy resins 1, 2, 83, 91, 113, 125,  
 177, 284, 299  
 anhydride and etherification  
 reaction 219  
 anionic and cationic initiators  
 31–32  
 alicyclic anhydrides 32  
 aliphatic anhydrides 32  
 anhydrides 32  
 canhydrides 32  
 imidazole 31  
 polymercaptan 31–32  
 bisphenol-A epoxy resin 24  
 bisphenol-F epoxy resin 24–25  
 clay nanocomposites 188–192  
 crosslinking of 83  
 cure reaction 218  
 curing condition 34  
 bisphenol-A epoxy resin 34–35  
 bisphenol-F epoxy resin 34  
 cycloaliphatic epoxy resin 34  
 glycidylamine epoxy resin 34  
 phenol novolac epoxy resin 34  
 cycloaliphatic epoxy resin 26  
 data interpretation  
 dielectric and conductivity  
 300–302  
 experimental techniques 300  
 D-clay nanocomposites 189–190
- DGEBA and organomodified clay  
 190
- DGEBA-DER332 DNA modified  
 clay 191
- DGEBA-LY556-based epoxy resin  
 204
- dielectric response of 303
- diluents 36
- electrical properties of 302–306
- epoxy/conductive filler  
 micro-composites 317–325  
 nano-composites 325–331

 solid epoxy natural fibre composite 51  
 solution intercalation method 266  
 spectroscopic techniques 139, 217  
 spherical metal oxide  
     nanocomposites 202  
 spraying coating technique 153  
 spray-up process 39  
 storage modulus 113, 114  
 strain calibration factor (SCF) 227  
 supercapacitors 13  
 supercritical fluids 409  
 symmetric hopping model 322
- t**  
 tan delta 114  
 tensile analysis 280  
 thermal degradation 191  
 thermally reduced freeze-dried graphene oxide (TRfdGEO) 143  
 thermally reduced graphene oxide (TRGO) 143, 246  
 thermal processing 409  
 thermogravimetry analysis (TGA) 6, 186  
 thermoplastic matrices 84  
 thermoplastic polymers 98, 259, 351, 374  
 thermoset polymer 98  
 thermosets 299

- thermosetting epoxy polymer 83  
 thermosetting polymers 1, 241, 299  
 3D carbon nanomaterials 144  
 2,4-toluene diisocyanate (TDI) 354,  
     357  
 treated sisal fibre-reinforced epoxy  
     composite 107  
 triethylenetetramine (TETA) 141,  
     205, 250, 376  
 trimethylolpropane triglycidyl ether  
     (TMPT) 376  
 2D ATR-FTIR spectroscopy 233  
 2D material 263  
 2D carbon nanomaterials 131  
 2D carbon nanostructures 139
- U**  
 ultrasonication 65  
 ultrasonic fabrication method 54  
 ultrasonic waves 269  
 unsaturated polyesters 177  
 urea-formaldehyde (UF) 368  
 UV-initiated curing process 223
- V**  
 vacuum-assisted resin infusion  
     (VARIM) methods 104  
 vacuum assisted resin transfer  
     moulding process (VARTM)  
     43
- vacuum bag moulding 47  
 vacuum infusion process (VIP) 45  
 variable range hopping (VRH) model  
     319, 320  
 vascular healing system 375  
 vascular network healing system  
     376  
 Vogel-Fulcher-Tamman (VFT)  
     311  
 voids generation 100
- W**  
 water absorption  
     on dielectric properties 254  
     dynamic mechanical properties  
         251–253  
     factors 242–247  
     on mechanical properties  
         247–250  
     rate 102, 103  
     test 101  
     thermomechanical properties  
         253–254  
 water diffusion 232
- X**  
 X-ray diffraction technique 232
- Z**  
 ZnO nanoparticles 368
