Preface *xiii*

History of Traditional/Advanced Manufacturing 1

Esther T. Akinlabi, Michael C. Agarana, and Stephen A. Akinlabi

- 1 Introduction 1
- 2 Progress in Manufacturing 3
- 3 Overview of Advanced Manufacturing 5
- 4 Environmental Impact and Significance 6
- 5 Economic Importance of Advanced Manufacturing 7
- 6 Sustainability of Advanced Manufacturing 9
- 7 Trend of Advanced Manufacturing (AM) 10
- 8 Summary 11
- References 12

1 Modeling and Optimization in Manufacturing by Hydroforming and Stamping 13

Hakim Naceur and Waseem Arif

- 1.1 Introduction 13
- 1.2 Recent Advances in Stamping and Hydroforming Simulation 14
 - 1.2.1 Fast Nonlinear Procedures in Stamping and Hydroforming 16
 - 1.2.1.1 Geometrical Mapping Algorithm 17
 - 1.2.1.2 Radial Length Development Algorithm 17
 - 1.2.1.3 Orthogonal Length Unfolding Algorithm 17
 - 1.2.2 Multistage Inverse Method for Stamping and Hydroforming 20
 - 1.2.2.1 Generation of Intermediate Configurations 21
 - 1.2.2.2 Integration of Stress States 22
 - 1.2.2.3 Procedure for Mapping Fields between Two Configurations 22
 - 1.2.2.4 Application to the Demeri Cylindrical Cup 24
 - 1.2.3 Improved Inverse Method for Stamping and Hydroforming 27
 - 1.2.3.1 Basic Idea 27
 - 1.2.3.2 Deformation Path Prediction 27
 - 1.2.3.3 Consideration of Bending Moments 27
 - 1.2.3.4 Bending and Unbending Problem 29

1.2.3.5	Application to the Square Box of Numisheet93	30
1.3	Optimization of Stamping and Hydroforming Parameters	31
1.3.1	Mathematical Optimization Problem	33
1.3.2	Shape Optimization of the Initial Blank	33
1.3.3	Optimization of Addendum Surfaces of Stamped Parts	34
1.3.4	Optimization of Drawbead Restraining Forces	36
1.3.5	Optimization of Tool Geometry	38
1.3.6	Optimization of Material Parameters	39
1.3.7	Optimization of Hydroforming Process Parameters	41
1.4	Future Outlooks	43
1.5	Conclusions	44
	References	45
2	Numerical Simulation Techniques in Casting Process	49
	<i>Qingyan Xu and Cong Yang</i>	
2.1	Introduction	49
2.2	Numerical Models	50
2.2.1	Heat Transfer Model	50
2.2.1.1	Heat Conduction	50
2.2.1.2	Heat Convection	51
2.2.1.3	Heat Radiation	51
2.2.1.4	Heat Conduction Partial Differential Equation	52
2.2.1.5	Finite Difference Method for Solving Heat Transfer Problem	52
2.2.2	Fluid Flow Model	53
2.2.2.1	Continuity Equation	54
2.2.2.2	Navier–Stokes Equation	54
2.2.2.3	Numerical Algorithms	54
2.2.2.4	Free Surface Track	55
2.2.3	Stress Simulation Model	56
2.2.3.1	Thermal Elastoplastic Model	57
2.2.3.2	Numerical Solution	57
2.2.4	Microstructure Simulation Model	58
2.2.4.1	The Nucleation Model	58
2.2.4.2	The Cellular Automaton (CA) Method	59
2.2.4.3	The Phase-Field Method	59
2.2.5	Initial and Boundary Conditions	61
2.2.5.1	Initial Conditions	61
2.2.5.2	Boundary Conditions	61
2.3	Modeling Casting Process and Optimization	62
2.3.1	Mold Filling Simulation	62
2.3.1.1	Cylinder Head Cover Filling Simulation	62
2.3.1.2	Aircraft Cabin Door Casting Simulation	63
2.3.2	Solidification Simulation	64
2.3.2.1	Comparison Study of DS Solidification Simulation	67
2.3.2.2	Processing Parameter Optimization Using Solidification Simulation	69

2.3.3	Stress Simulation	70
2.3.3.1	Hollow Bar Stress Simulation	71
2.3.3.2	Turbine Blade Stress Simulation	71
2.3.4	Casting Microstructure Simulation	74
2.3.4.1	Casting Grain Structure Simulation	74
2.3.4.2	Dendrite Microstructure Simulation	76
2.4	Conclusion	79
	Acknowledgments	79
	References	80
3	Modeling and Optimization Process in Milling	83
	<i>Bogdan A. Chirita</i>	
3.1	Milling	83
3.1.1	Introduction	83
3.1.2	Lightweight Alloys Machining	85
3.2	Modeling and Simulation of Milling	86
3.2.1	Response Surface Methodology	87
3.2.1.1	Application of RSM to Machining	88
3.2.1.2	Response Surface Methodology Applied to Investigate the Cutting Force in Face Milling of AZ61A Magnesium Alloy Parts	89
3.2.2	Fuzzy Logic	98
3.2.2.1	Application of Fuzzy Method in Machining	101
3.2.2.2	Example of Fuzzy Logic Applied to Predict Surface Roughness in Magnesium Milling	102
3.3	Conclusion	106
	References	106
4	Modeling and Optimization of the Abrasive Water Jet Cutting Process	113
	<i>Popan I. Alexandru</i>	
4.1	Introduction	113
4.2	Purpose and Methods	115
4.3	Description of Experimental Setup	118
4.4	Modeling and Optimization Process	120
4.4.1	Mathematical Modeling	120
4.4.2	Effect of Machining Parameters on Quality Characteristics	126
4.5	Process Optimization	127
4.6	Conclusions	129
	References	130
5	Modeling and Optimization in Manufacturing by Laser	133
	<i>Manuela Pacella</i>	
5.1	Introduction	133
5.2	Analytical Modeling of Laser Processing	134
5.2.1	Process Parameters in Laser Micromachining	135

5.2.2	Case Study – Topographical Modeling of Laser Micromachining	137
5.2.3	Case Study – Modeling the Recoil Pressure in the Evaporation Stage of Laser Micromachining	140
5.3	Experimental Optimization of Laser Micromachining of Complex 3D Freeform Surfaces	144
5.3.1	Experimental Optimization of Channels/Grooves-like Structures	144
5.3.2	Experimental Optimization of 3D Complex Freeform Surfaces	147
5.4	Experimental Characterization of the Subsurface Integrity of Complex 3D Freeform Surfaces Post Laser Manufacturing	151
5.5	Concluding Remarks	154
	References	155
6	Introduction to Isostatic Pressing and Its Optimization	157
	<i>Gautam R. Vadolia, K. Premjit Singh, Manoj K. Gupta, Bharat Doshi, and Vikas Rathore</i>	
6.1	Introduction	157
6.2	HIP Technology Positioning	159
6.3	HIP Production Process for Powder Metallurgy	159
6.3.1	Melting and Atomization	160
6.3.2	Canning	161
6.3.3	Hot Isostatic Pressing (HIP) Process	163
6.3.3.1	Pressure Vessel	164
6.3.3.2	Furnace	164
6.3.3.3	Gas Handling	165
6.3.3.4	Controls	165
6.3.3.5	Auxiliary Systems	166
6.3.4	Post Processing	166
6.4	Recent Developments in HIP Equipment and HIP Processes	166
6.4.1	Availability of Higher Size Equipment	167
6.4.2	Equipment with Uniform Rapid Cooling (URC)	167
6.4.3	Equipment with Uniform Rapid Quenching (URQ)	168
6.4.4	Gas Impregnation Equipment, Insulation HIP, High-Pressure HIP [50, 55]	168
6.4.5	Sinter-HIP	168
6.4.6	HIP for Nuclear Waste Treatment	169
6.4.7	Preheating HIP Equipment	170
6.4.8	Atmosphere Control HIP Treatment	170
6.4.9	Densal HIP Process	170
6.4.10	Liquid HIP (LHIP)	171
6.5	HIP Applications	171
6.5.1	Densification of Product	172
6.5.2	Consolidation of Powder for Near Net Shape (NNS)	173
6.5.3	Cladding and Diffusion Bonding	174
6.6	Typical HIP Installations	175
6.7	Optimization in HIP	176

6.7.1	Optimization of Process Parameters	177
6.7.2	Optimization of Container/Canister Size	179
6.7.2.1	Macroscopic Approach	179
6.7.2.2	Microscopic Approach	182
6.7.2.3	Soft Computing	183
6.8	Summary	184
	References	186
7	Modeling and Optimization Algorithms in Rapid Prototyping, Submerged Arc Welding, and Turning	193
	<i>Munish K. Gupta, Mozammel Mia, Nancy Gupta, Sunpreet Singh, Ankush Choudhary, Muhammad Jamil, Aqib M. Khan, Krzysztof Nadolny, Wojciech Kapłonek, Danil Y. Pimenov, and Catalin I. Pruncu</i>	
7.1	Introduction	193
7.2	Evolutionary Algorithms	195
7.2.1	Particle Swarm Optimization	195
7.2.2	Classical Bacteria Foraging Optimization	196
7.2.3	Self-Adaptive Bacteria Foraging Optimization	197
7.2.4	Invasive Weed Optimization	198
7.2.5	Artificial Bee Colony Optimization	198
7.3	Experimental Conditions	199
7.3.1	Fused Deposition Modeling	199
7.3.1.1	Technical Specifications for FDM	200
7.3.1.2	Optimization Model for FDM	200
7.3.2	Submerged Arc Welding	201
7.3.2.1	Technical Specifications for SAW	201
7.3.2.2	Optimization Model for SAW	202
7.3.3	Turning of Inconel-800 Alloy	202
7.3.3.1	Technical Specifications for Turning	203
7.3.3.2	Optimization Model for Turning	203
7.4	Results and Discussion	203
7.4.1	Parameters Initialization for Proposed Algorithms	203
7.4.2	Optimization	206
7.4.2.1	Optimization of FDM Parameters	206
7.4.2.2	Optimization of SAW Parameters	207
7.4.2.3	Optimization of Turning Parameters	209
7.5	Best Optimization Model	210
7.6	Conclusions	210
	Compliance with Ethical Standards	211
	References	211
8	Optimization of Deposition Parameters in Plasma Spray Coatings	217
	<i>Keshavamurthy Ramaiah, Naveena Bettahalli Eswaregowda, Vijay Tambrallimath, and Prabhakar Kuppahalli</i>	
8.1	Introduction	217

8.1.1	Effect of Plasma Spray Process Parameters	220
8.1.1.1	Plasma Power	221
8.1.1.2	Plasma Gas	222
8.1.1.3	Carrier Gas	222
8.1.1.4	Mass Flow Rate of Powder	223
8.1.1.5	Stand-Off-Distance	224
8.1.1.6	Spraying Angle	225
8.1.1.7	Angle of Powder Injection	225
8.1.2	Powder-Related Variables	225
8.1.2.1	Substrate-Related Variables	227
8.2	APS Process Optimization and Modeling	228
8.3	Case Study	230
8.4	Conclusions	231
	References	232

9 Modeling and Optimization Methods in Forming Processes 237

Catalin I. Pruncu, Jun Jiang, and Jianguo Lin

9.1	Introduction	237
9.2	Materials Used in Metal Forming Processes	238
9.3	Sheet Manufacturing	239
9.4	Metal Forming Challenges	239
9.4.1	Friction in Metal Forming	243
9.4.2	Tool Wear of Metal Forming	245
9.4.3	Coatings in Metal Forming	246
9.4.4	Micromechanics Modeling of Micro-Forming Processes	247
9.5	Conclusions	247
	References	248

10 Advances in Manufacturing, Laser Additive Techniques: Case Study 253

Esther T. Akinlabi, Michael C. Agarana, and Stephen A. Akinlabi

10.1	Introduction	253
10.2	Advanced Manufacturing Technology	262
10.2.1	Additive Manufacturing	262
10.2.1.1	Electron Beam	263
10.2.1.2	Laser-Based AM Process	263
10.2.2	Advances in Additive Manufacturing	264
10.2.3	Future Trends in Additive Manufacturing	265
10.2.3.1	Robotics	265
10.2.3.2	Manufacturing in the 4th Industrial Revolution	266
10.2.3.3	Modeling in Manufacturing	267
10.3	Applications of Laser Additive Techniques	268
10.3.1	Application to Aerospace	268
10.3.2	Application to Medicine	270

10.3.3	Application to Fine Arts	271
10.4	Sustainability of Advanced Manufacturing Techniques	273
10.4.1	Sustainability of Process and Equipment	273
10.4.2	Sustainability of Applications	275
10.4.2.1	Advantages	276
10.4.2.2	Disadvantages	276
10.4.3	Comparative Advantage Sustainability	277
10.5	Mathematical Methods for Advanced Manufacturing	279
10.5.1	Mathematical Techniques	279
10.5.2	Operational Research Techniques	280
10.5.2.1	Applications of Waiting Line Theory	281
10.5.2.2	Application of Game Theory	281
10.5.2.3	Simulation and Monte Carlo Technique	282
10.5.2.4	Dynamic Programming	283
10.5.3	Heuristic Techniques	284
10.5.4	Statistical Techniques	284
10.6	Theoretical Analysis of Laser Additive Manufacturing	284
10.6.1	Modeling and Simulation of Laser Additive Manufacturing	284
10.6.2	Future Research Direction in Theoretical Additive Manufacturing	288
10.7	Technology Challenges	288
10.7.1	Challenges in Advanced Manufacturing	288
10.7.2	Challenges in Laser Additive Manufacturing	290
10.7.3	Suggested Solutions to Technology Challenges	293
10.8	Summary	294
	References	295
