Preface *xi*

Acknowledgments *xv*

1 Introduction to Gallium Nitride Properties and Applications *1*

Fabrizio Roccaforte and Mike Leszczynski

1.1 Historical Background *1*

1.2 Basic Properties of Nitrides *4*

1.2.1 Microstructure and Related Issues *7*

1.2.2 Optical Properties *13*

1.2.3 Electrical Properties *16*

1.2.4 Two-Dimensional Electron Gas (2DEG) in AlGaN/GaN
Heterostructures *19*

1.3 Applications of GaN-Based Materials *23*

1.3.1 Optoelectronic Devices *24*

1.3.2 Power- and High-Frequency Electronic Devices *26*

1.4 Summary *30*

Acknowledgments *31*

References *31*

**2 GaN-Based Materials: Substrates, Metalorganic Vapor-Phase
Epitaxy, and Quantum Well Properties** *41*

Ferdinand Scholz, Michal Bockowski, and Ewa Grzanka

2.1 Introduction *41*

2.2 Bulk GaN Growth *42*

2.2.1 Hydride Vapor-Phase Epitaxy (HVPE) *43*

2.2.2 Sodium Flux Growth Method *45*

2.2.3 Ammonothermal Growth *46*

2.3 MOVPE Growth *51*

2.3.1 Basics About Nitride MOVPE *54*

2.3.2 Epitaxy on Foreign Substrates *58*

2.3.2.1 Sapphire as a Foreign Substrate *58*

2.3.2.2 GaN on SiC and Si *60*

2.3.3 Defect Reduction by ELOG, FACELO, etc. *62*

2.3.4 In Situ ELOG by SiN Deposition *64*

2.3.5	Doping of Nitrides	64
2.3.6	Growth of Other Binary and Ternary Nitrides	67
2.4	InGaN QWs: Growth and Decomposition	72
2.4.1	Growth of InGaN QWs on Polar, Nonpolar, and Semipolar GaN Substrates	72
2.4.2	Origins of In Fluctuations	75
2.4.3	Homogenization of InGaN QWs	78
2.4.4	Decomposition of the QWs	79
2.5	Summary	82
	Acknowledgments	82
	References	83
3	GaN-Based HEMTs for Millimeter-wave Applications	99
	<i>Kathia Harrouche and Farid Medjdoub</i>	
3.1	Introduction	99
3.2	Targeted Applications for GaN Millimeter-wave Devices	99
3.2.1	High-Power Amplification	100
3.2.2	Broadband Amplifiers	102
3.2.3	5G	103
3.2.3.1	GaN for 5G	104
3.2.3.2	GaN Base Station PAs	106
3.2.3.3	Moving Forward to 6G	108
3.3	GaN-based Material Designs for Millimeter-wave Applications	108
3.3.1	Intrinsic Characteristics and Comparison with Other Materials for RF Devices	108
3.3.2	Specific Material Systems for RF Devices	114
3.4	Device Design and Fabrication of Millimeter-wave GaN Devices	116
3.4.1	Description of Key Processing Steps for Various GaN Device Designs	116
3.4.1.1	Device Scaling for Millimeter Wave	116
3.4.1.2	T-shaped Gate Design	116
3.4.1.3	Advanced Ohmic Contact Technology	117
3.4.1.4	N-polar GaN HEMTs	118
3.4.1.5	AlN-Based Device Performances	119
3.4.1.6	InAlGaN-Based Device Performances	121
3.4.2	State-of-the-art Millimeter-wave GaN Transistors	122
3.5	Overview of MMIC Power Amplifiers	123
3.5.1	MMIC Technology Using III-N Devices	123
3.5.1.1	III–V Material-Based MMIC Technology	123
3.5.1.2	Power Amplifiers	124
3.5.1.3	Low-Noise Amplifier	125
3.5.2	MMIC Examples from Ka-band to D-band Frequencies	125
3.6	Summary	126
	References	127

4	Technologies for Normally-off GaN HEMTs	137
	<i>Giuseppe Greco, Patrick Fiorenza, Ferdinando Iucolano, and Fabrizio Roccaforte</i>	
4.1	Introduction	137
4.1.1	Threshold Voltage in AlGaIn/GaN HEMTs	138
4.2	GaN HEMT “Cascode”	140
4.3	“True” Normally-off HEMT Technologies	142
4.3.1	Recessed-gate HEMT	142
4.3.2	Fluorinated HEMT	145
4.3.3	Recessed-gate Hybrid MISHEMT	149
4.3.4	p-GaN Gate HEMT	155
4.4	Other Approaches	163
4.5	Summary	164
	Acknowledgments	165
	References	165

6	Reliability Issues in GaN Electronic Devices	199
	<i>Milan Ćapajna and Christian Koller</i>	
6.1	Introduction	199
6.1.1	Reliability Testing and Failure Analysis of GaN HEMTs	200
6.2	Reliability of GaN HEMTs for RF Applications	204
6.2.1	AlGaIn/GaN HEMTs	204
6.2.1.1	Trapping Effects	204
6.2.1.2	Gate-edge Degradation	207
6.2.1.3	Hot Electron Degradation	209
6.2.2	InAlN/GaN HEMTs	211
6.2.2.1	Hot Electron Degradation	212
6.2.2.2	Role of Hot Phonons	214
6.2.3	Thermal Issues in RF GaN HEMTs	215

6.3	Reliability and Robustness of GaN Power Switching Devices	219
6.3.1	Parasitic Effects in the Carbon-Doped GaN Buffer	221
6.3.1.1	Insulation of GaN Buffer by Carbon Doping	221
6.3.1.2	Time-Dependent “Dielectric” Breakdown (TDDB) of the GaN Buffer	223
6.3.1.3	Dynamic $R_{DS,ON}$ Due to Buffer Trapping	225
6.3.2	Gate Degradation in p-GaN Switching HEMTs	230
6.3.3	V_{th} Instabilities in GaN MISHEMTs	233
6.3.3.1	Studies of PBTI in MISHEMTs	237
6.4	Summary	241

	<i>Yang Mei, Rong-Bin Xu, Huan Xu, and Bao-Ping Zhang</i>	
10.1	Introduction	367
10.1.1	Properties and Application of GaN VCSELs	367
10.1.2	Brief History and Current Status of GaN VCSELs	368
10.1.3	GaN VCSELs with Different DBRs	369
10.1.3.1	GaN VCSELs with Hybrid DBR Structure	370
10.1.3.2	GaN VCSELs with Double Dielectric DBR Structure	371
10.2	Efficiency of Heat Dissipation of Different Device Structures	372
10.2.1	Simulation of Heat Profile of the Device	372
10.2.2	Dependence of R_{th} on Cavity Length	373
10.3	Green VCSELs Based on InGaN QDs	375
10.3.1	Advantages of QDs Compared with QWs	375
10.3.2	Growth and Optical Properties of InGaN QDs	377
10.3.3	Fabrication Process of VCSELs	379
10.3.4	Properties of QD Green VCSELs	379
10.4	Green VCSELs Based on Cavity-Enhanced Emission of Localized States in Blue Emitting InGaN QWs	380
10.4.1	Cavity Effect	380
10.4.2	Properties of Cavity-Enhanced Green VCSELs	381
10.5	Dual-Wavelength Lasing Based on QD-in-QW Active Structure	384
10.5.1	Characteristics of QD-in-QW Structure	384
10.5.2	Lasing Characteristics of VCSELs	386
10.6	Blue VCSELs with Different Lateral Confinements	386
10.6.1	Design of Index-Guided Structure	386
10.6.2	Emission Properties of VCSELs with Lateral Confinement	388
10.7	Summary	389
