**Preface** *xiii*

## **Part I Asymmetric Synthesis** 1

- 1 Introduction and Characteristics** 3  
*Yong-Bin Wang, Shao-Hua Xiang, and Bin Tan*
- 1.1 Introduction and Classification 3
- 1.2 Specification of Configuration 9
- References 11
- 2 Metal-Catalyzed Asymmetric Synthesis of Biaryl Atropisomers** 13  
*Tao Zhou and Bing-Feng Shi*
- 2.1 Introduction 13
- 2.2 Biaryl Coupling 13
- 2.2.1 Cross-coupling 13
- 2.2.1.1 Kumada–Tamao–Corriu Cross-coupling 14
- 2.2.1.2 Negishi Cross-coupling 15
- 2.2.1.3 Suzuki–Miyaura Cross-coupling 15
- 2.2.2 Other Types of Cross-coupling 24
- 2.2.3 Oxidative Coupling 24
- 2.2.3.1 Cu-Catalyzed Oxidative Coupling 25
- 2.2.3.2 Oxidative Coupling Reactions with Other Metals 27
- 2.3 Desymmetrization and (Dynamic) Kinetic Resolution via Functional Group Transformation 29
- 2.3.1 Desymmetrization of Prochiral Biaryls 29
- 2.3.2 Kinetic Resolution of Racemic Axially Chiral Biaryls 30
- 2.3.3 Dynamic Kinetic Resolution of Racemic Axially Chiral Biaryls 30
- 2.3.4 Ring-opening Reactions 32
- 2.4 Formation of Aromatic Ring via [2 + 2 + 2] Cycloaddition 35
- 2.4.1 Cobalt-Catalyzed Enantioselective [2 + 2 + 2] Cycloadditions 35
- 2.4.2 Rhodium-Catalyzed Enantioselective [2 + 2 + 2] Cycloadditions 36

2.4.3	Iridium-Catalyzed Enantioselective [2 + 2 + 2] Cycloadditions	36
2.5	C—H Bond Functionalization	38
2.5.1	Chiral Catalyst-Controlled C—H Bond Functionalization	38
2.5.2	Chiral Auxiliary-Induced C—H Bond Functionalization	40
2.5.3	Atroposelective C—H Arylation	40
2.6	Summary and Conclusions	42
	References	42
<b>3</b>	<b>Organocatalytic Asymmetric Synthesis of Biaryl Atropisomers</b>	<b>47</b>
	<i>Shaoyu Li, Shao-Hua Xiang, and Bin Tan</i>	
3.1	Introduction	47
3.2	Atroposelective Synthesis of Biaryls by Kinetic Resolution Strategy	47
3.2.1	Conventional Kinetic Resolution	47
3.2.1.1	Kinetic Resolution via Asymmetric Alkylation	48
3.2.1.2	Kinetic Resolution via Asymmetric Acylation	50
3.2.1.3	Kinetic Resolution via Asymmetric Transfer Hydrogenation and Michael Addition	53
3.2.2	Dynamic Kinetic Resolution Strategy	54
3.2.2.1	DKR via Asymmetric Electrophilic Bromination	54
3.2.2.2	DKR via Asymmetric Nucleophilic Addition	56
3.2.2.3	DKR Based on Asymmetric Ring-Opening/Expansion Transformation	57
3.3	Atroposelective Synthesis of Biaryls by Desymmetrization Strategy	59
3.4	Atroposelective Arene Formation to Access Axially Chiral Biaryls	61
3.4.1	Intramolecular Atroposelective Arene Formation	61
3.4.2	Atroposelective Arene Formation via Intermolecular Annulation	63
3.5	Atroposelective Synthesis of Biaryls via Direct C—H Arylation Strategy	67
3.5.1	Organocatalytic C—H Arylation by [3,3]-Sigmatropic Rearrangement	67
3.5.2	Atroposelective Arylation Based on Quinone Derivatives	68
3.5.3	Atroposelective Nucleophilic Aromatic Substitution	71
3.6	Conclusion	72
	References	72
<b>4</b>	<b>Enantioselective Synthesis of Heterobiaryl Atropisomers</b>	<b>75</b>
	<i>Damien Bonne and Jean Rodriguez</i>	
4.1	Introduction	75
4.2	Atropisomeric Heterobiaryls Featuring Two Six-Membered Rings	75
4.2.1	Functionalization of Heterobiaryls	75
4.2.2	Atroposelective Ring Formation	81
4.3	Atropisomeric Heterobiaryls Featuring a Five-Membered Ring	87
4.3.1	From Preformed Cyclic Systems	87
4.3.2	Formation of the Heterobiaryl Axis	93
4.3.3	Atroposelective Ring Formations	95
4.4	Atropisomeric Heterobiaryls Featuring Two Five-Membered Rings	103
4.4.1	Functionalization of Heterobiaryls	103
4.4.2	Aromatization of a Bis-heterocycle	104

4.4.3	Atroposelective Ring Formations	105
4.5	Conclusion and Outlook	106
	References	106
<b>5</b>	<b>Asymmetric Synthesis of Nonbiaryl Atropisomers</b>	<b>109</b>
	<i>Mirza A. Saputra, Mariel Cardenas, and Jeffrey L. Gustafson</i>	
5.1	Introduction	109
5.2	Styrenes	109
5.2.1	Axially Chiral Styrenes via Point-to-Axial Chirality Transfer	110
5.2.2	Axially Chiral Styrenes Controlled by Chiral Auxiliary	111
5.2.3	Metal-Catalyzed Enantioselective Synthesis of Axially Chiral Styrene	111
5.2.4	Organocatalytic Synthesis of Axially Chiral Styrenes	114
5.3	Amides	118
5.3.1	Stereochemical Stability of Atropisomeric Amides	118
5.3.2	Lithiation of Atropisomeric Amides to Access Various Alkylations	118
5.3.3	Syntheses of Atropisomerically Stable Amides via Chiral Auxiliaries	120
5.3.4	Catalytic Asymmetric Dihydroxylation via Sharpless KR Conditions	121
5.3.5	Atroposelective Aldol Reactions via DKR Approach	121
5.3.6	Atroposelective Halogenation of Aromatic Amides	122
5.3.7	Atroposelective [2 + 2 + 2] Cycloaddition Toward Atropisomerically Stable Benzamides	123
5.3.8	Enantioselective O-alkylation of Axially Chiral Amides	123
5.4	Diaryl Ethers	124
5.4.1	Resolution Studies of Diaryl Ethers	124
5.4.2	Enantioselective Synthesis of Diaryl Ether	125
5.4.3	Enzyme-Catalyzed Synthesis of Diaryl Ether	126
5.4.4	Synthesis of Scaffolds Related to Diaryl Ethers via Csp <sup>2</sup> -H Activation	127
5.5	Anilides	127
5.5.1	Stereochemical Stability of Axially Chiral Anilides	129
5.5.2	Kinetic Resolution or DKR to Access Axially Chiral Anilides	129
5.5.3	Synthesis of Axially Chiral Anilides via Planar to Axial Chirality Transfer	130
5.5.4	Metal-Catalyzed Synthesis of Chiral Anilides	131
5.5.5	Organocatalytic Synthesis of Chiral Anilides	131
5.6	Lactams and Related Scaffolds	133
5.6.1	Stereochemical Stability of Atropisomeric Lactams	134
5.6.2	Diastereoselective Cyclization Toward Atropisomeric Lactams	134
5.6.3	Enantioselective N-arylation Toward Lactam Atropisomers	134
5.6.4	Atroposelective [2 + 2 + 2] Cycloaddition with Isocyanates	135
5.6.5	Chiral Auxiliary Approach Toward Resolving Atropisomeric Lactams	136
5.6.6	Enantioselective Brønsted Base-Catalyzed Tandem Isomerization–Michael Reactions Toward Atropisomeric Lactams	136
5.7	Diaryl Amines	137
5.7.1	Stereochemical Stability of Diaryl Amines	137
5.7.2	Atroposelective Approaches Toward Diaryl Amines or Related Scaffolds	138

- 7 Asymmetric Synthesis of Axially Chiral Natural Products 173**  
*He Yang and Wenjun Tang*
- 7.1 Introduction 173
- 7.2 Diastereoselective Coupling–Point to Axial Chirality Transfer 175
- 7.2.1 Intramolecular Diastereoselective Coupling 176
- 7.2.1.1 Diastereoselective Coupling Enabled by Intrinsic Chirality 176
- 7.2.1.2 Diastereoselective Coupling Facilitated by Chiral Auxiliaries 182
- 7.2.2 Intermolecular Diastereoselective Aryl Coupling 183
- 7.2.2.1 Diastereoselective Coupling Enabled by Intrinsic Chirality 183
- 7.2.2.2 Diastereoselective Coupling Facilitated by Chiral Auxiliary 189
- 7.3 Atroposelective Aryl Coupling with Chiral Catalyst 191
- 7.3.1 Catalytic Oxidative Aryl Coupling 191
- 7.3.2 Transition Metal-Catalyzed Atroposelective Aryl Coupling 194
- 7.4 Asymmetric Transformation of Biaryls 196
- 7.4.1 Dynamic Kinetic Resolution of Biaryl Structure – The Lactone Method 196

- 7.4.2 Desymmetrization of Prostereogenic Biaryls 197
- 7.4.3 Catalytic Atroposelective C–H Functionalization of Biaryls 199
- 7.4.4 Diastereoselective Synthesis from Racemic Biaryls 199
- 7.5 Atroposelective Aromatization 200
- 7.6 Diastereoselective Macrocyclization 202
- 7.7 Conclusions and Perspectives 204
- References 204

## Part II Applications 209

- 8 Asymmetric Transformations 211**  
*Gaoyuan Ma and Mukund P. Sibi*
- 8.1 Asymmetric Transformation of Axially Chiral Biaryls and Heterobiaryls 211
  - 8.1.1 Asymmetric Transformations with Preservation of Axially Chiral Backbone 212
  - 8.1.2 Asymmetric Transformations with Axial-to-central Chirality Transfer 213
- 8.2 Asymmetric Transformation of Axially Chiral Non-biaryl Compounds 214
  - 8.2.1 Cycloadditions and Cyclizations 214
    - 8.2.1.1 [4 + 2]-Cycloaddition 214
    - 8.2.1.2 [3 + 2]-Cycloaddition 214
    - 8.2.1.3 Radical Cyclization 215
    - 8.2.1.4 Heck Cyclization 217
    - 8.2.1.5 Carbanionic Cyclization 217
  - 8.2.2 Reaction with Nucleophiles 218
  - 8.2.3 Reaction with Electrophiles 220
    - 8.2.3.1 Reactivity as Enolates 220
    - 8.2.3.2 Lithiation 221
    - 8.2.3.3 Rearrangements 222
  - 8.2.4 Photoreactions 224
    - 8.2.4.1 Photocycloaddition 224
    - 8.2.4.2 Photocyclization 225
    - 8.2.4.3 Hydrogen Atom Abstraction 226
- 8.3 Asymmetric Transformation of Chiral Allenes 226
  - 8.3.1 Cyclization 226
    - 8.3.1.1 Palladium-Catalyzed Cyclization 226
    - 8.3.1.2 Rhodium-Catalyzed Cyclization 228
    - 8.3.1.3 Gold-Catalyzed Cyclization 231
    - 8.3.1.4 Silver-Catalyzed Cyclization 231
    - 8.3.1.5 Organic Reagent-Mediated Cyclization of Chiral Allene 232
  - 8.3.2 Cycloaddition 233
    - 8.3.2.1 Intermolecular Cycloaddition 233

- 8.3.2.2 Intramolecular Cycloaddition 234
- 8.3.3 Reaction with Nucleophiles 236
  - 8.3.3.1 Reaction with Carbon Nucleophiles 236
  - 8.3.3.2 Reaction with Heteroatom Nucleophiles 238
- 8.3.4 Chiral Allene as Nucleophiles 240
- 8.4 Conclusion 242
- References 243

## 9 Application for Axially Chiral Ligands 245

*Bing-Chao Da and Bin Tan*

- 9.1 Introduction 245
- 9.2 Monodentate Phosphines 246
  - 9.2.1 Asymmetric Hydrogenations 246
  - 9.2.2 Asymmetric Hydrosilylation of Olefins 248
  - 9.2.3 Asymmetric Allylic Substitutions 249
  - 9.2.4 Miscellaneous Catalytic Asymmetric Transformations 250
- 9.3 Diphosphine Ligands 252
  - 9.3.1 Hydrogenation Reactions 252
  - 9.3.2 C—C Bond Formation 255
  - 9.3.3 C—X Bond Formation 257
- 9.4 Phosphoramidite and Phosphamide Ligands 259
  - 9.4.1 Asymmetric Conjugate Addition with Organometallic Nucleophiles 259
  - 9.4.2 Hydrogenation 260
  - 9.4.3 Hydroboration/Hydrosilylation Reactions 261
  - 9.4.4 Allylic Substitutions 262
  - 9.4.5 Other Asymmetric Transformations 263
- 9.5 *N-P* Ligands 264
  - 9.5.1 Applications of *N, P*-Ligands 265
- 9.6 *C*<sub>2</sub>-Symmetric Diols 267
  - 9.6.1 Mukaiyama Aldol Condensation Reactions 267
  - 9.6.2 Diels–Alder Reaction 268
  - 9.6.3 Arrangement Reaction 269
  - 9.6.4 Reductive Reactions 269
- 9.7 Other Axially Chiral Ligands in Asymmetric Transformations 270
- 9.8 Conclusions 271
- References 271

## 10 Application for Axially Chiral Organocatalysts 275

*Takahiko Akiyama*

- 10.1 Introduction 275
- 10.2 Chiral Brønsted Acid Catalysts 276
  - 10.2.1 Chiral BINOL Derivatives 276
  - 10.2.2 Chiral Phosphoric Acid 276
- 10.3 Chiral Counteranion Catalysts and Chiral Phase Transfer Catalysts 285

10.4	Brønsted Base Catalyst	288
10.5	Lewis Base Catalysts	289
