<b>1</b>	<b>Chemical Processing of Mixed-Cation Hybrid Perovskites: Stabilizing Effects of Configurational Entropy</b>	<b>1</b>
	<i>Feray Ünlü, Eunhwan Jung, Senol Öz, Heechae Choi, Thomas Fischer, and Sanjay Mathur</i>	
1.1	Introduction	1
1.1.1	Stability Issues of Organic–Inorganic Hybrid Perovskites	2
1.2	Crystal Structure of Perovskites	4
1.2.1	Goldschmidt Tolerance Factor for 3D Structure	5
1.2.2	Octahedral Factor	5
1.2.3	Role of A-Site Cation	7
1.2.4	Theoretical Calculations: Molecular Dynamics of A-Site Cation	8
1.2.5	Entropy of Mixing: Configurational Effects in Mixed-Cation Perovskites	11
1.3	Multiple A-Site Cation Perovskites	12
1.3.1	FA <sup>+</sup> /MA <sup>+</sup> Alloying for Higher Phase Stability and Photovoltaic Efficiency	12
1.3.2	Cesium Inclusion for Thermal Stability	13
1.3.3	Rb <sup>+</sup> Small-Cation Influence on Perovskite Structure for Thermal Stability	15
1.3.4	Guanidinium Large-Cation Influence on Perovskite Structure for Stability	16
1.3.5	Triple- and Quadruple-Cation Hybrid Perovskites for Stability and Optimum Performance	17
1.3.6	Larger Organic Cations: Reducing Dimensionality for Improved Thermal Stability	20
1.4	Conclusion and Perspectives	22
	Acknowledgments	24
	References	24

<b>2</b>	<b>Flash Infrared Annealing for Processing of Perovskite Solar Cells</b>	<b>33</b>
	<i>Sandy Sánchez and Anders Hagfeldt</i>	
2.1	Introduction	33
2.2	Perovskite Crystal Nucleation and Growth from Solution	34
2.2.1	The Antisolvent Dripping Method	34
2.2.2	Thermodynamics of Nucleation and Crystal Growth	34
2.2.3	Kinetic Process for Rapid Thermal Growth	36
2.3	Rapid Thermal Annealing	37
2.3.1	The FIRA Method	37
2.3.2	FIRA and Antisolvent	39
2.3.3	Perovskite Film Crystallization for a Single IR Pulse	40
2.3.4	Perovskite Crystallization with Pulse Duration	42
2.3.5	Pulsed FIRA Method for Inorganic Perovskite Composition	45
2.3.6	Warmed-Pulsed FIRA Method	46
2.3.7	Crystallization Behavior of Mixed Perovskite Solutions	47
2.4	Structural Analysis of FIRA-Annealed Perovskite Films with Variable Pulse Time	50
2.4.1	Planar and Mesoporous Substrates	50
2.4.2	Crystal Structure Analysis	51
2.4.3	Structure of the Intermediate Phases	53
2.4.4	Internal Crystal Domain Structure	56
2.5	A Cost-Effective and Environmentally Friendly Method	57
2.5.1	Life-Cycle Assessment (LCA) of the Perovskite Film Synthesis Methods	57
2.5.2	Relative Cost and Environmental Impact of the AS and FIRA Methods	58
2.6	Application for MAPI <sub>3</sub> Perovskite Solar Cells	60
2.6.1	Single IR Pulse and MAPbI <sub>3</sub> Perovskite Composition	60
2.6.2	Large-Area Devices	60
2.7	Planar Devices Architecture and Mixed Perovskite Composition	64
2.7.1	Thin Film Analysis	64
2.7.2	PV Performance and Electronic Characteristic of the Devices	64
2.8	Pulsed FIRA for Inorganic Perovskite Solar Cells	67
2.8.1	Thin Film Analysis	67
2.8.2	PV Performance	68
2.9	Rapid Manufacturing of PSCs with an Adapted Perovskite Chemical Composition	71
2.9.1	Rapid Annealed TiO <sub>2</sub> Mesoscopic Film	71
2.9.2	FCG Perovskite Stabilized with TBAI	72
2.9.3	PV Performance of the Manufactured PSCs	73
2.10	Outlook and Technical Details	75
2.10.1	Optimization of FIRA Process for Tandem Solar Cells	75
2.10.2	Automatic Roll-to-Roll System for the FIRA Manufacture of Perovskite Solar Cells	77

2.10.3	Electronic Setup	78
2.10.4	LabView Interface	78
2.11	Experimental Methods	80
2.11.1	Manufacture of Perovskite Solar Cells	80
2.11.2	Perovskite Solution Preparation	80
2.11.3	Antisolvent Method	81
2.11.4	FIRA Method	81
2.11.5	HTM Deposition and Back Contact Evaporation	81
2.11.6	Device Characterization	82
2.11.7	Material Characterization	82
2.11.8	Temperature Measurement	83
