Preface *xiii*

1	Extracellular Matrix Hydrogels from Decellularized Tissues for Biological and Biomedical Applications	1
	<i>Brendan C. Jones, Nicola Elvassore, Paolo De Coppi, and Giovanni G. Giobbe</i>	
1.1	Introduction to Hydrogels	1
1.1.1	Definition and Use of Hydrogels in Biomedical Applications	1
1.1.2	Classification and Properties of Hydrogels	2
1.1.2.1	Synthetic Hydrogels	3
1.1.2.2	Natural Hydrogels	5
1.2	Key Features and Functions of the Extracellular Matrix in Homeostasis and Development	6
1.3	Extracellular Matrix-Based Hydrogels Derived from Decellularization of Organs	8
1.3.1	Production of ECM Hydrogels	8
1.3.2	Characterization of ECM Hydrogels	10
1.3.3	Pancreatic ECM-Derived Hydrogels	11
1.3.4	ECM Hydrogels Derived from Liver	12
1.3.5	Lung ECM Hydrogels	13
1.3.6	Hydrogels Derived from Decellularized Colon	14
1.3.7	ECM-Derived Hydrogels from Small Intestine	15
1.3.8	Cellular Responses to ECM Hydrogels	17
1.4	Commercially Available Products	18
	References	19
2	Collagen-Based Systems to Mimic the Extracellular Environment	23
	<i>Umber Cheema and Vivek Mudera</i>	
2.1	Cells in Tissues	23
2.2	Collagen in Tissues	24
2.2.1	Structure of Collagen	25
2.2.2	Collagen Sources	25
2.3	Controlling Collagen Architecture	26

2.3.1	Direction: Collagen Orientation	26
2.3.2	Diameter: Collagen Fibril Diameter	27
2.3.3	Density: Fibril Packing and Cross-Linking	28
2.4	Engineering Collagen Scaffolds	29
2.4.1	Collagen Cross-Linking	29
2.4.2	Diffusion of Nutrients and Oxygen Through Collagen Scaffolds	29
2.4.3	Proliferation of Cells in 3D	30
2.4.4	Mechanical Stimulation and Bioreactors	31
2.4.5	Growth Factors	32
2.4.6	Drug-Loaded Scaffolds	32
2.5	Conclusions	33
	References	33

3 Designing Elastin-Like Recombinamers for Therapeutic and Regenerative Purposes 37

José Carlos Rodríguez-Cabello, Sara Escalera, Diana Juanes-Gusano, Mercedes Santos, and Alessandra Girotti

3.1	Introduction	37
3.2	ELR-Based Hydrogels in Tissue Engineering	39
3.2.1	Hydrogels in Musculoskeletal Tissue Regeneration	42
3.2.2	Hydrogels in Cardiovascular Tissue Regeneration	44
3.2.3	Hydrogels in Skin Tissue Regeneration	46
3.2.4	Hydrogels in Neural Tissue Regeneration	47
3.3	ELR-Based Hydrogels for Drug Delivery	48
3.3.1	Physically Cross-Linked Hydrogels	48
3.3.2	Chemically Cross-Linked Hydrogels	52
3.4	Future Remarks	56
	References	56

4 Enzyme-Assisted Hydrogel Formation for Tissue Engineering Applications 63

Sílvia Pérez-Rafael, Eva Ramon, and Tzanko Tzanov

4.1	Introduction	63
4.2	Enzymatically Cross-Linked Hydrogels	66
4.2.1	Oxidoreductases	67
4.2.1.1	Peroxidases – HRP	67
4.2.1.2	Tyrosinase	72
4.2.1.3	Laccase	72
4.2.2	Transferases: Transglutaminase	73
4.3	Supramolecular Enzyme-Driven Hydrogelation	75
4.3.1	Hydrolases	75
4.3.1.1	Phosphatases	75
4.3.1.2	Metalloproteinases	80
4.3.1.3	Thermolysin	80
4.3.1.4	β -Lactamases	80

4.3.2	DNA Polymerases	80
4.4	Conclusions	81
	References	83
5	Hierarchical Peptide- and Protein-Based Biomaterials: From Molecular Structure to Directed Self-assembly and Applications	97
	<i>Yinchen Yuan, Yejiao Shi, and Helena S. Azevedo</i>	
5.1	Introduction	97
5.2	Molecular Design/Selection of Building Blocks for Hierarchical Self-assembly	98
5.2.1	Hydrophobic Aromatic Amino Acids	98
5.2.2	Hydrophobic Aliphatic Amino Acids	106
5.2.3	Hydrophilic Charged Amino Acids	107
5.2.4	Others	108
5.3	Hierarchical Assembly Through Environmental Manipulation	108
5.3.1	Temperature	108
5.3.2	Magnetic Field	108
5.3.3	Electric Field	110
5.3.4	Patterned Substrates	110
5.3.5	Shear Forces	111
5.3.6	pH	111
5.3.7	Ultrasound	112
5.3.8	Other Methods	112
5.4	Techniques for the Characterization of Hierarchically Organized Biomaterials	113
5.4.1	Polarized Light Microscopy	113
5.4.2	High-Resolution Microscopy (AFM, TEM, and SEM)	115
5.4.3	Small-Angle X-ray Scattering (SAXS)	115
5.5	Application of Hierarchical Self-assembling Peptide- and Protein-Based Biomaterials in Tissue Regeneration	117
5.5.1	Cornea	117
5.5.2	Blood Vessels	118
5.5.3	Skeletal Muscle	119
5.6	Conclusions	120
	Acknowledgments	120
	References	121
6	Short Peptide Hydrogels for Biomedical Applications	127
	<i>Priyadarshi Chakraborty, Lihi Adler-Abramovich, and Ehud Gazit</i>	
6.1	Introduction	127
6.2	Short Peptide Hydrogels	128
6.2.1	Fmoc-Protected Short Peptides	128
6.2.2	Short Peptide Hydrogels with Alternating Hydrophobic/Hydrophilic Amino Acid Residues	128

6.2.3	β -Hairpin Peptides	129
6.2.4	Acetyl-Protected Short Peptides	129
6.3	Biomedical Applications of Short Peptide Hydrogels	129
6.3.1	2D/3D Cell Scaffolding	129
6.3.2	Tissue Engineering	131
6.3.3	Wound Healing	134
6.3.4	Drug Delivery	137
6.4	Conclusions and Outlook	139
	References	140
7	Supramolecular Assemblies of Glycopeptides as Mimics of the Extracellular Matrix	149
	<i>Diana Soares da Costa, Alexandra Brito, Rui L. Reis, and Iva Pashkuleva</i>	
7.1	Introduction	149
7.2	Glycoproteins and Proteoglycans in the ECM	150
7.3	Design of Self-assembling Peptide–Saccharide Conjugates	151
7.4	Supramolecular Systems Generated by Interfacial Co-assembly	154
7.5	Conclusions	155
	Acknowledgments	156
	References	156
8	Supramolecular Assemblies for Cancer Diagnosis and Treatment	161
	<i>Shuang Liu and Bing Xu</i>	
8.1	Introduction	161
8.2	Cancer Diagnosis	162
8.2.1	Optical Imaging	162
8.2.2	Magnetic Resonance Imaging (MRI)	165
8.2.3	Photoacoustic Imaging	169
8.3	Cancer Treatment	173
8.3.1	Drug Delivery	173
8.3.2	Enzyme-Instructed Self-assembly (EISA for Cancer Therapy)	175
8.4	Future Perspectives	189
	References	190
9	Polyzwitterionic Hydrogels as Wound Dressing Materials	195
	<i>Konstans Ruseva and Elena Vassileva</i>	
9.1	Polyzwitterions	195
9.1.1	General Structure and Properties	195
9.1.2	Nonfouling Properties	195
9.2	Wound Management and Wound Dressings	197
9.3	PZIs as Dressings Materials for Acute Wounds	198
9.3.1	Polycarboxybetaines (PCBs)	198
9.3.2	Polysulfobetaines	202
9.4	PZI as Dressings for Chronic Wounds Management	206

9.4.1	Dressings for Chronic Wounds Management Based on Polycarboxybetaines	206
9.4.2	Polysulfobetaines as Dressings for Chronic Wounds Management	208
9.5	Conclusions	212
	References	213
10	Hyaluronan-Based Hydrogels as Modulators of Cellular Behavior	217
	<i>Sara Amorim, Rui L. Reis, and Ricardo A. Pires</i>	
10.1	Introduction	217
10.2	Biological Relevance of Hyaluronan	218
10.2.1	Hyaluronan in Biological Tissues and Fluids	218
10.2.2	Hyaluronan as a Signaling Molecule	218
10.3	Hyaluronan-Based Systems for Biomedical Applications	220
10.3.1	Hydrogels for Tissue Engineering	220
10.3.1.1	Differentiation of Stem Cells	220
10.3.1.2	Space Filling Hydrogels	223
10.3.2	3D Cancer Models	224
10.4	Conclusion and Future Remarks	226
	Acknowledgments	226
	References	226
11	Hydrogel Fibers Produced via Microfluidics	233
	<i>Kongchang Wei, Claudio Toncelli, René M. Rossi, and Luciano F. Boesel</i>	
11.1	Introduction to Microfluidics and Microfluidic Wet Spinning	233
11.1.1	Fundamentals of Microfluidics	233
11.1.2	Application of Microfluidics to Fiber Production: Microfluidic Wet Spinning	234
11.2	Fabrication of Chips for Microfluidic Wet Spinning	237
11.3	Biomedical Applications of Hydrogel Fibers Produced via Microfluidics	242
11.3.1	Tissue Engineering	243
11.3.1.1	Single-Fiber Scaffolds	243
11.3.1.2	Assembled Fiber Scaffolds	249
11.3.2	Sensors and Actuators	251
11.3.2.1	Sensors	251
11.3.2.2	Actuators	255
11.3.3	Controlled Drug Delivery	256
11.3.4	Other Biomedical Applications	257
11.4	Hydrogel Optical Fibers	257
11.4.1	Materials	258
11.4.2	Applications	262
11.5	Conclusions	263
	Acknowledgments	264
	References	264

12	Embedding Hydrogels into Microfluidic Chips: Vascular Transport Analyses and Drug Delivery Optimization	275
	<i>Ana M. Martins, Alexander B. Cook, Martina Di Francesco, Maria Grazia Barbato, Sayanti Brahmachari, Martina Pannuzzo, and Paolo Decuzzi</i>	
12.1	Introduction: Microfluidic Chips for Modeling Human Diseases and Developing New Therapies	275
12.2	Hydrogels to Mimic the Extracellular Matrix (ECM)	276
12.3	Fabrication of Microfluidic Chips	277
12.3.1	Single-Channel Microfluidic Chips	277
12.3.2	Double-Channel Microfluidic Chip	281
12.4	Applications of Microfluidic Chips in Biophysical Transport Analysis	282
12.4.1	Single-Channel Microfluidic Chips	282
12.4.2	Double-Channel Microfluidic Chips	282
12.5	Nanoparticle Transport Analyses	284
12.6	Computer Simulations of Nanoparticle and Cell Transport	285
12.7	Conclusions and Future Directions	287
	References	288
13	Multifunctional Granular Hydrogels for Tissue-Specific Repair	295
	<i>Rui J. Almeida, Ana Fernandes, Vítor M. Gaspar, and João F. Mano</i>	
13.1	Introduction	295
13.2	Granular Hydrogels – Functional Features and Design	297
13.2.1	Injectability	299
13.2.2	Inter-particle Annealing Toward MAPs Assembly	300
13.2.3	Void Spaces and Microporosity	304
13.2.4	Modularity and Multifunctionality in Granular Systems	305
13.2.5	Bioactive Molecules Delivery	306
13.3	Granular Hydrogels for Tissue-Specific Repair	308
13.3.1	Vascularization Strategies	308
13.3.2	Skin Tissues Repair	311
13.3.3	Bone Tissue Repair	313
13.3.4	Emerging Trends and Applications	317
13.4	Conclusions and Future Perspectives	317
	Acknowledgments	318

14	Injectable Hydrogels as a Stem Cell Delivery Platform for Wound Healing	323
	<i>Qian Xu, Sigen A., and Wenxin Wang</i>	
14.1	Wound Healing	323
14.1.1	Clinical Needs for Wound Healing	323
14.1.2	Wound Healing Pathology	323
14.1.2.1	Hemostasis	325

14.1.2.2	Inflammation	326
14.1.2.3	Proliferation	326
14.1.2.4	Remodeling	328
14.2	Stem Cells for Skin Wound Healing	328
14.2.1	Stem Cell Overview	328
14.2.2	Adipose-Derived Stem Cells for Wound Healing	329
14.2.3	Current Limitations and Future Directions of SCs for Wound Healing	330
14.3	Injectable Hydrogel Dressing as a Delivery Platform	331
14.3.1	Types of Injectable Hydrogels	332
14.3.1.1	Naturally Derived Injectable Hydrogels	334
14.3.1.2	Synthetic Injectable Hydrogels	335
14.3.1.3	Hybrid Injectable Hydrogels	339
14.3.2	Injectable Hydrogels as Scaffolding for Stem Cells Delivery	340
