Important Abbreviations *xxxi*

Is Another Textbook on Electrochemistry Really Necessary? *1*

Electrochemistry – Long Established, But Still Complicated? *1*

What Can You Expect from the Subject Area and This Book? *2*

Historical and Current Textbooks *4*

References *4*

Acknowledgments *5*

Sources of Figures *6*

Part I Principles *7*

1 The Electrode Reaction – The Core of Electrochemistry *9*

1.1 Electrical Current and Chemical Conversion in Electrochemical Cells *9*

1.1.1 Charge, Current, and Voltage *9*

1.1.2 Electrochemical Cells Convert Charge and Substances *11*

1.2 Electrodes and Ions *13*

1.3 What Is the Relationship Between Degree of Chemical Conversion and Flow of Charge? *16*

1.4 What Is the Relationship Between Electrical Current and Electrochemical Reaction Rate? *17*

1.5 Galvanic Cells and Electrolytic Cells *20*

1.6 Summary *22*

Test your knowledge *22*

References *23*

2 Thermodynamics of Electrochemical Reactions *25*

2.1 Electrochemical Cell Voltage and Electrode Potentials *25*

2.1.1 Definition of the Electrochemical Cell Voltage *25*

2.1.2 The Electrochemical Series *26*

2.2 What Is the Link from Cell Voltage to Thermodynamic Potentials? *28*

2.2.1 The Electrochemical Potential *28*

2.2.2 The Nernst Equation *33*

2.2.3 Activities Describe Effective Content *39*

2.2.4 Calculating the Standard Cell Voltage *41*

2.2.5 Linking the Equilibrium Cell Voltage to Thermodynamic Functions of State *42*

2.2.6 Formal Potentials *47*

2.3	Cell Voltages Are Associated with Charge Separation at Interfaces – The Galvani Voltage	48
2.3.1	The Galvani Voltage for Electrodes with Ion Transfer	48
2.3.2	The Galvani Voltage for Electrodes with Electron Transfer	50
2.3.3	Galvani Voltage at Phase Boundaries Without Electrodes	51
2.3.4	Combining Galvani Voltages to Give the Cell Voltage	55
2.3.5	Electrodes with Mixed Potentials	57
2.4	Applications of Cell Voltage Measurements and of Galvanic Cells	58
2.4.1	Reference Electrodes	58
2.4.2	Determination of Thermodynamic Properties	66
2.4.3	Chemical Analysis with Potentiometry	68
2.4.4	Electrochemical Energy Conversion Systems: An Overview	69
2.5	Summary	80
	Test your knowledge	80
	References	82
3	Electrochemical Kinetics – Homogeneous and Heterogeneous Processes	85
3.1	Coupling Between Mass Transport and Interfacial Reactions	85
3.1.1	What Are the Important Steps During Electrode Reactions with Interfacial Electron or Ion Transfer?	86
3.1.2	Electrode Reactions Occur via Multiple Elementary Steps	88
3.2	Kinetics of Charge Transfer	90
3.2.1	Homogeneous Equilibrium Reactions and Temperature Effects on Reaction Rates	90
3.2.2	Derivation of the Butler–Volmer Equation	92
3.2.3	Parameters in the Butler–Volmer Equation	97
3.2.4	Interpretation of the Transfer Coefficient α	101
3.2.5	Limiting Cases Derived from the Butler–Volmer Equation	102
3.2.6	Can We Employ the Butler–Volmer Equation for Multistep Electrode Reactions?	106
3.2.7	Multiple Redox Systems Present at the Electrode Surface Lead to Mixed Potentials	107
3.2.8	What Are the Limitations of the Butler–Volmer Formalism?	108
3.3	Summary	110
	Test your knowledge	111
	References	113
4	Mass Transport and Boundary Layers	115
4.1	Survey and Terminology	116
4.2	Migration	117
4.2.1	Structure of the Electrolyte Phase and Ion Mobility	117
4.2.2	Electrical Quantities for the Characterization of Charge Carrier Mobility	120
4.2.3	The Relationship Between Ion Mobility and Conductivity	124
4.2.4	Why Are Molar Conductivities of Strong Electrolytes Concentration Dependent?	126
4.2.5	The Law of Independent Migration of Ions	126
4.2.6	Why Does the Molar Conductivity of Weak Electrolytes Depend Strongly on Concentration?	127
4.2.7	Transference Numbers Describe the Contribution of Ions to the Total Current	131

4.2.8	Interactions Between Ions	136
4.2.9	Activity Coefficients	140
4.2.10	Conductivity Coefficients	142
4.3	The Electrical Double Layer	145
4.3.1	The Electrical Properties of the Double Layer	145
4.3.2	The Molecular Structure of the Electrical Double Layer	146
4.3.3	How Does the Adsorption of Ions or Molecules Change the Structure and the Properties of the Electrical Double Layer?	149
4.4	Diffusion	154
4.4.1	Random Movement of a Single Particle	154
4.4.2	Mass Transport by Diffusion – Fick’s First Law	157
4.5	The Diffusion Layer	160
4.5.1	Change in Concentration Profiles with Time–Fick’s Second Law	160
4.5.2	Current Transients and Concentration Profiles During Potential Step Experiments (Chronoamperometry)	161
4.6	Combined Transport Processes During Electrophoresis	169
4.6.1	Basic Principles	169
4.6.2	Methods of Protein Electrophoresis	170
4.6.3	Capillary Electrophoresis	174
4.7	Combined Transport Processes in the Nernst–Planck Transport Equation	181
	Test your knowledge	184
	References	185

Part II Experimental Methods in Electrochemistry 187

5	Electroanalytical Methods and Electrochemical Sensors	189
5.1	The Family Tree of Electroanalytical Methods	189
5.2	Potentiometry	191
5.2.1	When Is an Open-Circuit Voltage Selective for Only One Kind of Ion?	191
5.2.2	Membrane Electrodes	192
5.2.3	Glass Electrodes	193
5.2.4	Selectivity and Limit of Detection for ISEs	196
5.2.5	Solid-State Membrane Electrodes	199
5.2.6	Liquid Membrane Electrodes	199
5.2.7	Potentiometric Gas Sensors	202
5.2.8	The Lambda Probe (λ -Probe)	204
5.2.9	Summary for Potentiometry	206
5.3	Dynamic Electrochemical Methods	207
5.3.1	Potentiostats and Galvanostats	208
5.3.2	Electrodes for Voltammetry	210
5.3.3	Electrolyte Solutions for Voltammetry	214
5.3.4	Cell Constructions for Voltammetry	215
5.3.5	Cyclic Voltammetry	216
5.3.6	Modern Mercury Electrodes and Pulse Programs	229
5.3.7	Differential Pulse Voltammetry	230
5.3.8	Square Wave Voltammetry	232
5.3.9	Survey of Further Excitation Signals and Their Application	235
5.3.10	Methods with Integrated Preconcentration (Stripping Methods)	239
5.3.11	The Use of Standard Additions to Mitigate Matrix Effects	242
5.3.12	Speciation by Means of Voltammetric Methods	243

5.4	Amperometric Sensors	245
5.4.1	Amperometric Detection in Flow Systems	246
5.4.2	Amperometric Detection During Titrations	246
5.4.3	The Clark Electrode	248
5.5	Voltammetry Under Special Mass. Transport Conditions – Reactants Bound to the Electrode	249
5.5.1	Thin Layer Voltammetry and Voltammetry of Immobilized Redox Systems	249
5.5.2	Voltammetry of Immobilized Microparticles	252
5.5.3	Nanoobject Collision Electrochemistry	255
5.6	Voltammetry Under Special Mass Transport Conditions – Microelectrodes	258
5.6.1	Steady-State Currents	258
5.6.2	Why Are There Steady-State Currents?	260
5.6.3	How Does the Current Evolve Before Reaching the Steady State?	263
5.6.4	Cyclic Voltammetry at Microdisk Electrodes	266
5.6.5	Analytical Features and Application of Microelectrodes	271
5.6.6	Arrays of Microelectrodes	276
5.7	Foundations of Electrochemical Instrumentation	279
5.7.1	Modern Voltammetric Workstations	279
5.7.2	Instrumental Compensation of Ohmic Drop	285
5.7.3	Troubleshooting and Eliminating Faults in Potentiostatic Systems	290
	Test your knowledge	290
	References	295

6 Investigation of Electrochemical Reaction Mechanisms in Liquid Electrolytes 303

6.1	Reaction Steps of an Electrode Reaction Mechanism	304
6.1.1	What Types of Processes Need to Be Considered?	304
6.1.2	Nomenclature for Electrode Reaction Mechanisms	306
6.2	From the Experimental Voltammogram to a Model Mechanism	306
6.2.1	How Should Experiments Be Conducted?	306
6.2.2	How to Design a Set of Experiments	308
6.2.3	How to Define and Identify Reversibility in the Context of CV	308
6.2.4	Diagnostic Criteria Indicate Building Blocks of Electrochemical Model Mechanisms	312
6.2.5	Zone Diagrams	316
6.3	When Is a Model Mechanism Plausible?	318
6.3.1	Simulation (Modeling)	318
6.3.2	Isolation and Characterization of Intermediates and Products	325
6.4	Fundamental Mechanistic Models of Molecular Electrochemistry in Liquid Phases	326
6.4.1	One-Electron Transfer Reactions Without Separate Chemical Steps	326
6.4.2	Multielectron Transfer Reactions Without Separate Chemical Steps	328
6.4.3	Coupled Homogeneous Chemical Reactions	331
6.4.4	Variants of the ECE Mechanism	334
6.4.5	The Square Scheme and Related Mechanisms	337
6.4.6	Catalysis by Electron Transfer	337
6.4.7	Special Phenomena	339
6.5	Extracting Quantitative Information from Experiments	342
6.5.1	Quantitative Data Analysis in Mechanistic Molecular Electrochemistry	343

6.5.2	Direct Evaluation of Parameter Values	343
6.5.3	Data Transformation: Linearization and Semi-integration	344
6.5.4	Use of Working Curves	346
6.5.5	Global Fitting to Experimental Curves	347
6.5.6	How Do We Optimize the Quality of Voltammetric Data?	350
6.5.7	Hiding and Modifying Reaction Steps	354
6.6	Complementary Techniques	358
6.6.1	Bulk Electrolysis and Coulometry	358
6.6.2	How Can We Determine the Stoichiometric Number of Charges n and the Diffusion Coefficient D ?	361
6.6.3	Spectroelectrochemistry	364
6.7	Summary	369
	Test your knowledge	369
	References	370
7	Electrochemical Impedance Spectroscopy	377
7.1	Ohmic Resistors and Ideal Capacitors in AC Circuits	379
7.2	Impedance Measurements with Electrochemical Cells	381
7.2.1	Instrumentation and Cells	381
7.2.2	Impedance Spectroscopy in Practice	383
7.3	Equivalent Circuits for Electrodes and Cells	384
7.3.1	Impedance for an Electrochemical Cell Without Faradaic Reaction	384
7.3.2	Impedance of an Electrochemical Cell with Faradaic Reaction and Without Diffusion Limitation	386
7.3.3	Impedance of an Electrochemical Cell with Faradaic Reaction and with Diffusion Limitation	388
7.4	Developing Equivalent Circuits	391
7.4.1	Partially Blocked Electrodes	391
7.4.2	Electrodes with Porous Coatings	392
7.4.3	Porous Electrodes	392
7.4.4	Constant Phase Elements (CPE)	394
7.5	Summary	397
	Test your knowledge	397
	References	398
8	Surface Electrochemistry	399
8.1	Overview and Systematics	399
8.2	Vibrational Spectroscopy at Surfaces	401
8.2.1	Infrared Reflection Absorption Spectroscopy (IRRAS)	402
8.2.2	Raman Spectroscopy	408
8.2.3	Exploitation of Nonlinear Optical Effects	410
8.2.4	Electron Energy Loss Spectroscopy	410
8.3	Ellipsometry	410
8.4	Surface Plasmon Resonance	414
8.5	Spectroscopy of Core Electrons	416
8.5.1	Primary and Secondary Processes	416
8.5.2	Electron Spectroscopy	418
8.5.3	X-Ray Absorption Spectroscopy	430
8.6	X-Ray Diffraction	434
8.7	Mass Spectrometry	435
8.8	Electrochemical Quartz Crystal Microbalance	436

8.8.1	Piezoelectric Effect and Quartz Microbalance	436
8.8.2	Influences on the Mechanical Resonance Frequency	438
8.8.3	Typical Applications	439
8.9	Single-Crystal Electrodes	443
8.9.1	Structure of Metal Crystals and Their Ideal Surfaces	444
8.9.2	What Is a Surface Reconstruction?	447
8.9.3	Which Types of Defects Exist at Surfaces?	447
8.9.4	Preparation of Single-Crystal Electrodes	448
8.9.5	Characterization of Single-Crystal Electrodes	450
8.9.6	What Are Superstructures?	452
8.9.7	Superstructures of Specifically Adsorbed Anions	454
8.9.8	Superstructure of Metal Adatoms After Underpotential Deposition	455
8.10	A Closer Look at the Electrical Double Layer	457
8.10.1	Interfacial Region and Excess Quantities	459
8.10.2	Excess Charge at Electrodes	462
8.10.3	The Potential of Zero Charge	465
8.10.4	Surface Excess and Adsorption Isotherms	467
8.10.5	Comparison of Experimental Surface Excess Data and Double-Layer Models	469
8.10.6	How Does the Structure of the Electrical Double Layer Influence Reaction Rates?	473
8.11	Electrochemical Scanning Tunneling Microscopy (ECSTM) and Electrochemical Scanning Force Microscopy (ECSFM)	475
8.11.1	Microscopy Beyond the Diffraction Limit	475
8.11.2	Principle of Scanning Tunneling Microscopy	479
8.11.3	Electrochemical Scanning Tunneling Microscopy	480
8.11.4	Basic Principles of Scanning Force Microscopy	483
8.11.5	Working Modes of Scanning Force Microscopy	485
8.11.6	Force–Distance Curves	488
8.11.7	Application of ECSFM	490
8.11.8	Artifacts, Image Resolution, and Sample Manipulation in STM and SFM Experiments	490
8.12	Scanning Electrochemical Microscopy (SECM)	492
8.12.1	Instrumentation and Overview	492
8.12.2	The Feedback Mode	493
8.12.3	Surface Interrogation Mode	498
8.12.4	Generation–Collection Mode	500
8.12.5	Redox Competition Mode	502
8.12.6	Direct Mode	503
8.12.7	Use of Homogeneous Reactions	503
8.12.8	Possibilities for Improving the Lateral Resolution	505
8.12.9	Application of Scanning Electrochemical Microscopy	507
8.13	Further Scanning Probe Microscopies	508
8.13.1	Photoelectrochemical Microscopy	508
8.13.2	Scanning Ion-Conductance Microscopy	509
8.13.3	Scanning Electrochemical Cell Microscopy	511
8.13.4	Scanning Reference Electrode Technique, Scanning Vibrating Electrode Technique, Localized Impedance Spectroscopy, and Ohmic Microscopy	512
8.13.5	Scanning Kelvin Probe Microscopy	513
	Test your knowledge	515

Part III Materials from and for Electrochemistry 533**9 Electrochemical Deposition of Materials 535**

- 9.1 Which Methods Can Be Used for Electrodeposition of Materials? 536
 - 9.1.1 Galvanic Deposition 536
 - 9.1.2 Immersion Plating 537
 - 9.1.3 Autocatalytic Metal Deposition 537
 - 9.1.4 Deposition of Semiconductors 538
- 9.2 Growth Modes During Metal Deposition 539
 - 9.2.1 Growth of a Thin Metal Layer on a Foreign Substrate 539
 - 9.2.2 Thermodynamics of Nucleation 540
 - 9.2.3 Kinetics of Nucleation 542
 - 9.2.4 Growth of Nuclei 544
 - 9.2.5 From Nuclei to a Continuous Film 547
 - 9.2.6 The Development of the Microstructure 547
- 9.3 How Does the Current Density Influence the Deposition Process? 549
 - 9.3.1 Relationship Between Current Density and Microstructure 549
 - 9.3.2 What Causes Current Density Distributions? 551
 - 9.3.3 The Wagner Number – Which Current Density Distribution Is the Relevant One? 552
 - 9.3.4 Pulse Deposition 553
 - 9.3.5 Influence of Bath Temperature 554
- 9.4 Composition of Galvanic Baths 554
 - 9.4.1 Basic Types of Galvanic Baths 554
 - 9.4.2 What Is the Function of Complexing Agents? 555
 - 9.4.3 What Is the Function of Brighteners, Levelers, Activators, and Wetting Agents? 556
- 9.5 Deposition of Complex Materials 560
 - 9.5.1 Direct Galvanic Deposition of Alloys 560
 - 9.5.2 Which Conditions Are Required for Direct Deposition of Alloys 562
 - 9.5.3 Deposition of Multilayers and Composites 563
- 9.6 Electrochemistry of Bipolar Electrodes 563
 - 9.6.1 Fundamentals 563
 - 9.6.2 Cell Setups with Bipolar Electrodes and Their Applications 565
- Test your knowledge 567
- References 568

10 Semiconductor Electrochemistry 571

- 10.1 Structure and Binding in Semiconductors 571
 - 10.1.1 Crystal Structure of Semiconductors 571
 - 10.1.2 Electronic Structure of Semiconductors 572
 - 10.1.3 The Fermi Level 580
 - 10.1.4 Doping of Semiconductors 584
 - 10.1.5 The Quasi-Fermi Level 586
- 10.2 Semiconductor Electrodes 587
 - 10.2.1 Interfaces at Semiconductors and the Space Charge Region 587
 - 10.2.2 The Flat Band Potential 592
 - 10.2.3 Current–Voltage Curves at Semiconductor Electrodes in the Dark 595
 - 10.2.4 Photocurrents at Semiconductor Electrodes 597
 - 10.2.5 Experimental Considerations 598
 - 10.2.6 Photoelectrochemical Methods for the Characterization of Semiconductor Electrodes 599

10.3	Application of Semiconductor Electrodes	601
10.3.1	Mineralization of Organic Pollutants in Wastewater	602
10.3.2	Dye-Sensitized Solar Cells as Example for Photovoltaic Cells	604
	Test your knowledge	608
	References	609
11	Solid-State Electrolytes and Other Unconventional Electrolyte Systems	613
11.1	Why Do Crystalline Solids Contain Defects?	613
