

Index

a

- Acetone cyanohydrin 427–428
 Acetonitrile 13, 53, 168, 180, 223, 230, 431–435
 Acetylenic acids 316
 A3-coupling reactions 222–224
 synthetic applications 227–229
 variation of 224–226
 Aerobic oxidation 289, 350, 357–363, 430
aes Cyprium 3
 Alcohol oxidation reactions 361–362
 Alkenyl carboxylic acids 309, 315
 Alkenylazaarenes 158
 α -Alkoxyamides 170–171
 Alkyl amines 27, 240, 242, 245, 272
 Alkyl carboxylic acids 320–326
 Alkylboronic acid derivatives 42, 289
 Alkynes 54, 56–57, 74–80, 96, 106–108, 178–180, 209–229, 250–251, 301, 374–378
 Alkynyl carboxylic acids 295, 316–320
 Alkynyl ketones 262
 Allene 154, 156, 160–161, 163, 246, 251, 377–378, 415
 Amidation of 2-aminopyridines 12–13
 Amides 27–33, 251, 267, 398–400, 445
 Amines 27–33, 221–229, 242–244, 396–398
 Amines synthesis 239–240
 Aminocarbonylation reaction 273–275
 Ammonia 63, 217, 240–241, 243, 245, 339, 396, 439
 Annulation reactions 18, 123–126, 231
 Anthraquinone derivatives 136
 Aromatic amines 111, 181, 242, 253, 337, 373, 396
 Aromatic Finkelstein reaction 415
 Aroylimidazo[1,2-*a*]pyridines 11
 Aroylimidazo[1,2-*a*]pyrimidines 11
 Aryl halides synthesis
 biaryl formation 65–66
 natural products 66–68
 symmetricalbiaryl formation 62–65
 Arylboronic acids 9, 32–34, 41–42, 58–59, 83, 85, 140, 185, 228, 245, 267, 289, 291, 333, 373, 409, 413–414
 Arylchalcogeno-moieties 140
 Arylstannane/silane derivatives 62
N-Aryl sulfonamides 30–31
 (–)-Aspergilazine A 454–455
 Asymmetric A³ (AA3)-coupling reactions 222, 226–227
 Asymmetric aldol reaction, of α -N₃ amide 171
 Asymmetric borylative propargylation 164
 Asymmetric decarboxylative Mannich reaction 321
 Asymmetric Mannich reaction 167, 170
 Asymmetric synthesis 153–154
 chiral ligands structure 154–155
 in situ generation
 borylcupuration 162–165
 hydrocupration 157–162
 intramolecular oxy- and amidocupration 156–157

- Asymmetric synthesis (*contd.*)
 reductive aldol reactions 155–156
 proton transfer conditions 165–172
 Atmospheric oxygen 349
 Atom Transfer Radical Polymerization
 (ATRP) 112–114
 Aureol 460, 462
 2-Azadienes 158–159
 7-Azaindoline 169–172
 Azide-alkyne cycloaddition 121, 194,
 213
 Azide-alkyne cycloaddition reactions
 301
 2,2'-Azobisisobutyronitrile (AIBN)
 429–430
- b**
- Baylis-Hillman acetates 211–212
 Benzoic acids 286, 309–315, 341, 416
 Benzyl cyanide 9, 429–432
 Benzylic acyloxylation 8–9, 291
 Biaryls 51, 57–68, 297, 311
 Biphenylenes 65–66
 1,2-Bis(2,5-diphenylphospholano)ethane
 (Ph-BPE) 154–160, 162–171,
 250
 Bond dissociation energies (BDE) 351,
 353, 383
 Boron compounds 35, 43
 Boronic acid esters 36–40
 Boronic acids 9, 27–28, 30, 32, 35, 41,
 42, 58–59, 62, 134, 140, 181, 185,
 212, 240, 244, 245–246, 264–265,
 317–318, 333, 373, 380, 382, 409,
 425, 428, 431–433
 Borylcupuration 162–165
 Bromaminic acid sodium salt 136
 1-Bromoindolizines 20–21
 Bronze Age 3, 350
 Buchwald–Hartwig amination 26
- c**
- Carbocycles synthesis 128–130
 Carbon–Carbon couplings
 130–134
 Carbon–halogen bond formations
 415–416
 Carbon–heteroatom bond formations
 289
 C–B bond formation 295
 C–H activation reactions
 297–299
 C–N bond formation 289–291
 C–O bond formation 291
 C–P bond formation 295
 C–S bond formation 291–295
 C–Se bond formation 295–297
 Carbon–heteroatom couplings
 134–141
 Carbon–nitrogen bond formations
 coupling reactions
 with N-Heterocycles 401
 with amides, lactams and
 carbamates 398–400
 with amines 396–398
 with ammonia 396
 with guanidines 400–401
 with protected hydrazines and
 hydroxylamines 400
 Carbon–oxygen bond formations
 401–402
 C–H functionalization 405
 C–O and C–N bond formation
 406–407
 C–O bond formation 404
 ligand role 403–404
 oxygen heterocycles 405–406
 Ullmann ether synthesis 402–403
 Carbon–phosphorous bond formations
 414–415
 Carbon–selenium and
 carbon–tellurium bond
 formations 413–414
 Carbon–silicon bond formations
 415
 Carbon–sulfur bond formations
 407–413
 Carbonyl compounds, structures and
 current status 169
 Carbonyl synthesis
 via oxidation of alcohols 357–358
 biomimetic catalyst systems
 358–360
 nitroxyl “dual” systems 360–362

- Carbonylation reactions 261
 - single 262–275
 - transition metals 261
- Carbonylative acetylation reaction 272–273
- Carboxylation reaction 268–269
- Carboxylic acids 54, 111, 126, 144, 159, 169, 268–269, 291, 295, 303, 309–310, 315–326, 333–334, 340–341, 351, 357, 377, 381, 404, 423, 426, 458, 460
- C–C and C–Heteroatom bond formation
 - Chan–Lam–Evans (CEL) coupling 83–85
 - Cu-catalyzed cyclization reactions 85–86
 - functionalization reactions 86–89
 - Ullmann coupling 81–83
- C–C bond formation 3, 51, 59, 96, 130, 172, 218, 324, 334, 351–357, 443
- C–C bond formation reactions 351–352
 - cross-dehydrogenative couplings under photochemical conditions 354–357
 - under thermal conditions 352–354
- C–Chalcogen couplings 138–141
- C–C coupling reactions
 - isohericenone and erinacerin A 447–449
 - macrocarpines D and E 450–453
 - (+) nocardioazine B 445–447
 - (+)-Piperarborenine B 449–450
 - (–)-Rhazinilam 447
- C–H activation 329
 - carbon–carbon bond formation via Cu-Catalyzed C(sp²)–H Activation 329–332
 - via Cu-Catalyzed C(sp³)–H Activation 332–334
 - carbon–heteroatom bond formation
 - C–N bond formation 334–339
 - C–O bond formation 339–341
 - C–P bond formation 345–346
 - C–S bond formation 346
 - C–X bond formation 341–345
- C–H-amination reactions 251–254
- C–N bond formation 3, 9–10, 26, 28, 81, 110–112, 114, 239, 265, 321, 334–339, 405, 406–407
- C–N coupling reactions
 - (–)-Aspergilazine A 454
 - (–)-Indolactam V 455–457
 - (–)-Palmyrolide A 458
 - (–)-Psychotriasine 454–455
- C–O bond formation 244, 334, 339–341, 401–402, 404–406
- C–O coupling reactions
 - (±)-Untenone A 460
 - coumestrol and aureol 460
- C–P bond formation 295, 345–346
- C–S bond formation 291–295, 314, 346, 407, 409, 413
- C–X bond formation 341–345, 416, 431
- C–N couplings 11, 51, 81–82, 110, 126, 134–138, 215, 286, 288, 323, 454–458
- Chalcones 12, 17, 19–20, 90
- Chan–Evans–Lam (CEL) coupling reaction 83–85, 98, 244, 314
- Chan–Lam coupling reaction 7–8, 244–246
- Chan–Lam reaction 23, 27–30, 32, 34, 36–38, 43, 246

 - Polar functional groups 240
 - Principles of Green Chemistry* 74, 104

- Propargylamines 141–142, 280, 322
 (–)-Psychotriasine 454–456
 Pyridine-fused derivatives 128
 Pyridinium moieties
 biological activities 7
 green methods 13–15
 synthesis and functionalization
 7–13
- r**
- Reductive aldol reaction 155–157
 Regioisomeric triazoles 178, 213
 Reversible Deactivation Radical
 Polymerization (RDRP)
 techniques 112
Rhazya stricta 447
 Ring expansion reactions 145–146
 Ring opening cross coupling reaction
 24–26
 Ring-forming reactions
 carbocycles synthesis 128–130
 heterocycles synthesis
 annulation reactions 123–126
 cycloadditions 121–123
 intramolecular cyclization 126
 Ring-opening trifluoromethylation
 386–388
 Rotaxanes and catenanes synthesis
 196–198
- s**
- (±)-Sacidumlignan 463
 Saturated diazaheterocycles 128–129
 Selanyls 36, 413
 Silicon enolates 154, 169
 Silyls 35–36
 Single carbonylation reactions
 carbonylative acetylation reaction
 272–273
 carbonylative coupling reactions
 262–268
 carboxylation reaction 268–269
 oxidative amidation 275
 oxidative carbonylation reactions
 269–272
 Single electron mechanism 42–43
- Sodium azide 128, 185, 189, 211, 241
 Sonogashira coupling reaction 214,
 262, 445
 Stable nitroxyl radicals 360
 Substituted pyrrolidines 232
N'-substituted *N*-(2-halophenyl)ureas
 126
 Sulfenylimidazo[1,2-*a*]pyridines
 9–10
 Sulfonamides 27–33, 112, 136–137,
 220–221, 289, 292, 312, 335, 386,
 399–400, 407
 Sulfones 35–36, 145, 293, 315, 346,
 413, 415
N-sulfonyl-1,2,3-triazoles synthesis
 198–199
 Suzuki cross coupling reaction 24
 Suzuki–Miyaura cross coupling reaction
 39
 Symmetrical biaryls 57
 aryl boronic acids 58–59
 C–H activation 59–62
- t**
- Terminal alkynes 9, 16, 18, 51–57, 77,
 80, 92–93, 95–96, 106–107, 109,
 121, 126, 130, 141, 168, 177,
 179–180, 183, 185, 188–189, 191,
 198, 210, 212, 214, 216, 221, 224,
 226, 232, 251, 273–275, 280–281,
 291, 300, 303–305, 314, 316, 318,
 350, 356–357, 377–378, 405, 415,
 426
 Terminal allenes 154, 160–161, 163,
 251
 Tertiary benzylic copper complexes
 165
 Tertiary propargylic ones 170
 Tetracyclic compounds 130
 Tetrazoles 108, 123–124, 423
 Three two-electron processes 42
 Transition metal (TM) 73, 103
 -catalyzed reactions 1
 1,2,3-Triazole synthesis 121
 Trifluoroacetophenone, alkylation of
 168

- Trifluoromethyl (CF₃) group 367–370
 aliphatic precursor 378
 direct 382–386
 functional group interconversions 378–382
 ring-opening 386–388
 alkenes and alkynes 374–378
 arenes and heteroarenes 370–374
 heteroatom bonds 388
α-Trifluoromethylated carbinols 170
Trifluoromethylation reactions 4,
 302–303, 367–389
- u**
- Ullmann coupling reaction 3, 63,
 81–83, 85, 123, 134, 405, 454
- Ullmann reaction 27–28, 65, 81–82,
 98, 110–111, 244, 395–396,
 402–403, 407
- Unsaturated compounds 157–165,
 246, 374
- (±)-Untenone A 458–460
- v**
- Vinyl epoxides 25–26
- Vinylzaarenes 157
- Visible-light promoted
 three-component coupling
 231, 321, 325
- Volatile Organic Compounds (VOCs)
 74, 83, 98, 104, 114
