Graphical Abstract *xi*

Preface *xiii*

1	Introduction to Sustainability and Green Chemistry	1
1.1	Introduction	1
1.2	Defining “Sustainability”	2
1.3	Dimensions of Sustainability	3
1.4	New Conceptual Frameworks to Define Sustainability	5
1.4.1	Five Dimension Framework	5
1.4.2	Four Force Model	5
1.4.3	Corporate Sustainable Management	7
1.5	Green Value Stream Mapping (GVSM)	7
1.6	“Greening the Waste”	8
1.7	Green Chemistry Terminology	10
1.8	Green Ways of Metal Extraction: Core of the Book	11
	Questions	13
2	Waste Handling and Pre-treatment	15
2.1	Introduction	15
2.2	Waste Categorization	17
2.2.1	Waste Electrical and Electronic Equipment (WEEE)	17
2.2.2	Agro-Residue Waste	20
2.2.3	Industrial Waste	21
2.3	Legislations and Regulations for Hazardous Wastes	27
2.4	Handling/Management of Hazardous Waste	28
2.4.1	Secured Landfilling	29
2.4.2	Incineration	30
2.4.3	Recycling of Hazardous Waste	31
2.5	A Call for Metal Recovery from Waste	31
2.5.1	Threat to Human Health and Environment	31
2.5.2	Waste: An Artificial Ore	32
2.5.3	“Waste” to Wealth	33

2.6	Pretreatment of Waste	34
2.6.1	Disassembling the Waste	34
2.6.2	Size Reduction (Comminution)	34
2.6.3	Screening/Sieving	35
2.6.4	Classification	36
2.6.5	Segregation	36
2.6.6	Calcination and Chemical Pretreatment	37
2.7	Summary and Outlook	37
	Questions	38
3	Conventional Technologies for Metal Extraction from Waste	39
3.1	Introduction	39
3.2	Pyrometallurgical Operations	40
3.2.1	Pyrometallurgical Treatment of Industrial Waste	40
3.2.2	Pyrometallurgical Treatment of WEEE	45
3.2.3	Major Challenges Associated with Pyrometallurgical Operations	49
3.3	Hydrometallurgical Treatment of Waste	50
3.3.1	Leaching of Metals in Acidic Medium	50
3.3.2	Leaching of Metals in Alkali Medium	57
3.3.3	Leaching with Lixiviants (Cyanide, Thiourea, Thiosulfate)	60
3.3.4	Halide Leaching	66
3.4	Summary and Outlook	69
	Questions	70
4	Emerging Technology for Metal Extraction from Waste:	
	I. Green Adsorption	71
4.1	Introduction	71
4.2	Adsorption	71
4.2.1	Hydrophilic Compounds	72
4.2.2	Hydrophobic Compounds	72
4.2.3	Polymer Matrix	73
4.3	Green Adsorption	74
4.4	Parameters Affecting the Adsorption Capacity of Green Adsorbents	75
4.4.1	Influence of pH	75
4.4.2	Influence of Temperature	76
4.4.3	Effect of Initial Concentration	76
4.4.4	Effect of Adsorbent Dosage	76
4.4.5	Effect of Co-ions	77
4.5	Adsorption Kinetic Models	77
4.6	Mechanism of Metal Uptake	78
4.7	Green Adsorbents: Relevant Literature	79
4.7.1	Agricultural Resources	79
4.7.2	Zeolites	81
4.7.3	Clay	84

4.7.4	Industrial Waste	85
4.7.5	Modified Biopolymers	88
4.8	Innovative Applications of Adsorption	88
4.9	Case Study	89
4.10	Summary and Outlook	90
	Questions	91
5	Emerging Technologies for Extraction of Metals from Waste II.	
	Bioleaching	93
5.1	Introduction	93
5.2	Bioleaching Process Description	94
5.3	Factors Affecting the Process Efficiency	95
5.3.1	Types of Microorganisms	95
5.3.1.1	Mesophiles	95
5.3.1.2	Thermophiles	96
5.3.1.3	Heterotrophic Microbes	97
5.3.2	Affinity Between Microorganisms and Metal Surfaces	97
5.3.3	Physicochemical Factors	98
5.3.3.1	Surface Properties	98
5.3.3.2	Oxygen and Carbon Dioxide Content	98
5.3.3.3	pH Value of Solution	99
5.3.3.4	Temperature	99
5.3.3.5	Mineral Substrate	99
5.3.3.6	Surface Chemistry of Metals	99
5.3.3.7	Surfactant and Organic Extractants	100
5.3.4	Reactor Design	100
5.4	Mechanism of Bioleaching Process	101
5.4.1	Biochemical Reaction (Direct vs. Indirect) Mechanism	102
5.4.2	Mechanism of Metal Sulfide Dissolution (Polysulfide Pathway)	103
5.5	Engineering Practices in Bioleaching Process	104
5.5.1	Batch Process	105
5.5.2	Continuous Process	106
5.5.3	Hybrid Processes	110
5.6	Application of Bioleaching in Extracting Metals from Waste	110
5.6.1	Extraction of Metals from WEEE	111
5.6.2	Extraction of Metals from Industrial Waste	115
5.6.3	Extraction of Metals from Mineral Waste	118
5.6.4	Extraction of Metals from Municipal Sewage Sludge	119
5.7	Technoeconomic Opportunities and Challenges	119
5.8	Summary and Outlook	121
	Questions	122
6	Future Technology for Metal Extraction from Waste:	
	I. Chelation Technology	123
	Abbreviations	123
6.1	Introduction	123

6.2	Defining “Chelation”	124
6.3	Classification of Ligands	124
6.4	Chemistry Associated with Chelation	127
6.4.1	Theories Derived for Metal–Ligand Complexation	127
6.4.2	Attributes of Metal Ions for Complexation	129
6.4.3	Metal–Chelate Complex Formation	130
6.4.4	The Chelate Effect	132
6.5	Chelation Process for Extraction of Metals	133
6.5.1	Framework for Chelating Agent Assisted Metal Extraction from Solid Waste	133
6.5.2	Process Parameters Affecting the Metal Extraction Process	135
6.5.2.1	Effect of Reaction pH	135
6.5.2.2	Effect of Molar Concentration of Chelating Agent	138
6.5.2.3	Effect of Reaction Temperature	140
6.5.2.4	Presence of Competing Ions in Reaction Zone	141
6.5.3	Factors Affecting Stability of Metal–Ligand Complex	142
6.6	Novel Applications of Chelating Agents	143
6.6.1	Chelating Agents Used for Metal Extraction from Metal-Contaminated Soil	144
6.6.1.1	Hydrometallurgical Route of Chelation Process (Direct Use)	144
6.6.1.2	Phyto-remediation of Soils in Presence of Chelating Agents	145
6.6.2	Chelating Agents Used for Metal Extraction from Industrial Waste	147
6.6.3	Chelating Agents Used for Metal Extraction from WEEE	149
6.7	Ecotoxicological Concerns and Biodegradability	151
6.8	Summary and Outlook	155
	Questions	155
7	Future Technology for Metal Extraction from Waste: II. Ionic Liquids	157
	Abbreviation	157
7.1	Introduction	158
7.2	What Are Ionic Liquids?	158
7.3	Characteristic Properties of Ionic Liquids	161
7.3.1	Melting Point	162
7.3.2	Vapor Pressure and Nonflammability	162
7.3.3	Thermal Stability	163
7.3.4	Density	164
7.3.5	Viscosity	164
7.3.6	Polarity	166
7.3.7	Coordination Ability	166
7.3.8	Conductivity	167
7.3.9	Solubility	167
7.4	Classification of Ionic Liquids	169
7.5	Environmental Scrutiny of Ionic Liquids	171
7.6	Applications of Ionic Liquids	173

7.6.1	Extraction of Metals from Aqueous Media	173
7.6.2	Extraction of Metals from Industrial Solid Waste/Ores	176
7.6.3	Extraction of Metals from WEEE	177
7.7	Summary and Outlook	179
	Questions	179
8	Scale-up Process for Metal Extraction from Solid Waste	181
	Nomenclature	181
8.1	Introduction	182
8.2	Process Intensification	183
8.3	Intensification of Metal Extraction Processes	185
8.3.1	Centrifugation	185
8.3.2	Liquid–Liquid Extraction	185
8.3.3	Mixing	186
8.3.4	Reactors	188
8.3.5	Comminution	188
8.3.6	Drying	189
8.4	Scaling Up from Batch to Continuous Process	189
8.4.1	Process Design Fabrication	190
8.4.2	Designing of Pilot Plant	191
8.4.2.1	Material Balance	191
8.4.2.2	Development of Comminution Circuit	193
8.4.3	Reactor Sizing and Agitator Selection	197
8.4.4	Design of Filtration System	199
8.4.5	Design of Heat Exchanger	201
8.4.6	Design of Precipitator Unit	202
8.4.7	Batch Scheduling	203
8.5	Summary and Outlook	204
	Questions	205
9	Process Intensification for Micro-flow Extraction: Batch to Continuous Process	207
	<i>Jogender Singh, Loveleen Sharma, and Jamal Chaouki</i>	
	Abbreviations	207
9.1	Introduction	208
9.2	Miniaturized Extraction Devices	208
9.2.1	Intensification in Miniaturized Extraction Devices	209
9.2.2	Application of Miniaturized Extraction Devices	211
9.3	CFI for Continuous Micro-flow Extraction	212
9.3.1	Designing CFI as an Extractor	216
9.3.2	Extraction Parameters	218
9.3.3	Methodology and Setup for Micro-flow Extraction	218
9.3.4	Liquid–Liquid Micro-flow Extraction	220
9.3.4.1	Typical Flow Patterns	220

9.3.4.2	Extraction Efficiency	222
9.3.4.3	Effect of Aqueous Phase Volume Fractions on Extraction Efficiency	223
9.3.5	Micro-flow Extraction of Co and Ni	225
9.3.5.1	Effect of pH	225
9.3.5.2	Effect of Residence Time	225
9.3.5.3	Effect of Extractant Concentration	229
9.4	Summary and Future Challenges	229
	Questions	229
