

## Contents

	<b>Preface</b>	<i>xi</i>
	<b>Acknowledgments</b>	<i>xiii</i>
<b>1</b>	<b>Introduction</b>	<i>1</i>
1.1	Energy and Membranes	<i>1</i>
1.2	Brief History of Membrane Technology	<i>3</i>
1.2.1	Current State-of-the-Art Membrane Technology	<i>5</i>
	References	<i>6</i>
<b>2</b>	<b>Fundamentals of Membrane Technology</b>	<i>9</i>
2.1	Introduction	<i>9</i>
2.2	Definition of Terms	<i>9</i>
2.2.1	The Membrane and Its Function	<i>9</i>
2.2.2	Membrane Materials and Structure	<i>10</i>
2.2.2.1	Symmetric and Asymmetric Membranes	<i>11</i>
2.2.2.2	Porous Membranes	<i>12</i>
2.2.2.3	Homogeneous Dense Membranes	<i>12</i>
2.2.2.4	Ion Exchange Membranes	<i>13</i>
2.2.2.5	Membrane Shapes	<i>13</i>
2.2.3	Mass Transport in Membranes	<i>14</i>
2.2.4	Separation Properties	<i>16</i>
2.3	Membrane Materials	<i>17</i>
2.3.1	Polymer Materials	<i>18</i>
2.3.1.1	Physical State and Properties of Polymer	<i>19</i>
2.3.2	Inorganic Materials	<i>20</i>
2.3.2.1	Preparation of Ceramic Membranes	<i>21</i>
2.4	Basic Principles of Membrane Preparation	<i>22</i>
2.4.1	Thermodynamics of Phase Separation	<i>22</i>
2.4.2	Nonsolvent-induced Phase Separation	<i>25</i>
2.4.2.1	Type of Polymer	<i>26</i>
2.4.2.2	Polymer Concentration	<i>26</i>
2.4.2.3	Additives	<i>26</i>
2.4.2.4	Casting Temperature	<i>26</i>

2.4.3	Thermally Induced Phase Separation	27
2.4.3.1	Polymer–Solvent Interaction	28
2.4.3.2	Effect of Cooling Rate	29
2.4.3.3	Effect of Additives	29
2.5	Membrane Fabrication	29
2.5.1	Asymmetric Membranes	29
2.5.2	Flat Sheet Membranes	33
2.5.3	Thin-Film Composite Membranes	34
2.6	Membrane Module Fabrication	34
	References	37

### **3 Membranes in Gas Separation for Energy and Environment** 39

3.1	Introduction	39
3.2	Basic Principles of Gas Separation in Polymer Membranes	41
3.2.1	Permeability and Selectivity	41
3.2.2	Temperature Dependence of Gas Transport	44
3.2.3	Pressure Dependence of Gas Transport	45
3.2.4	Unusual Sorption Behavior of Glassy Polymers	46
3.2.5	Criteria for Membrane Material Selection	48
3.2.5.1	Diffusivity-Selective Polymer Membranes	48
3.2.5.2	Solubility-Selective Membrane	49
3.3	Limitations of Gas Separations Using Polymer Membranes	52
3.4	Polymer Membrane Materials	55
3.4.1	Cellulose Acetate	55
3.4.2	Polysulfone	57
3.4.3	Polyimides	58
3.4.4	Siloxane Polymers	59
3.4.5	Substituted Polyacetylenes	61
3.4.6	Amorphous Fluoropolymers	64
3.4.7	Polybenzimidazole	66
3.4.8	Nanocomposites and Mixed Matrix Membranes	68
3.4.9	Other Promising Polymers	74
3.4.9.1	Pebax	74
3.4.9.2	Polymers with Intrinsic Microporosity	75
3.4.9.3	Thermally Rearranged (TR) Polymer Membranes	81
3.4.9.4	High-performance Polyimides	86
3.5	Membrane Gas Separation Applications	89
3.5.1	Air Separation	89
3.5.2	Hydrogen Separation	94
3.5.3	Hydrocarbon/Hydrocarbon Separation	97
3.5.4	Carbon Dioxide Separation	101
3.5.4.1	Post-combustion Flue Gas CO <sub>2</sub> Capture	102
3.5.4.2	CO <sub>2</sub> Removal from Natural Gas	109

3.5.4.3	CO <sub>2</sub> Recovery from Biogas	110
3.5.5	Vapor/Gas Separation	112
3.6	Conclusions and Future Perspectives	113
	References	113
<b>4</b>	<b>Membranes for Fuel Cell</b>	<b>135</b>
4.1	Introduction	135
4.1.1	Fuel Cells as Electrochemical Engines	138
4.1.2	Classification of Fuel Cells	140
4.1.3	History of Fuel Cell Development	141
4.2	Basic Electrochemical Principles	143
4.2.1	Electrochemical Reactions	143
4.2.2	Basic Principles of Fuel Cells	145
4.2.3	Voltage Losses	151
4.2.3.1	Activation Losses	151
4.2.3.2	Fuel Crossover and Internal Currents	153
4.2.3.3	Ohmic Losses	153
4.2.3.4	Mass Transport and Concentration Losses	154
4.2.4	Water Management	156
4.3	Membranes in Proton Exchange Membrane Fuel Cell	157
4.3.1	Perfluorosulfonic Acids	158
4.3.2	Characteristics of Nafion	159
4.3.3	Degradation of Nafion	162
4.3.4	Composite PEM	163
4.3.5	Radiation-Grafted Fluoropolymer PEM	163
4.3.6	Hydrocarbon-Based Cation Exchange Membranes	168
4.3.7	Fuel Cell Stacks-MEA	177
4.4	Membranes in Direct Methanol Fuel Cell	177
4.5	Membranes in Anion Exchange Membrane Fuel Cell	180
4.5.1	Ammonium Groups and Their Stability	182
4.5.2	Stable Polymer Backbones	187
4.5.2.1	Aryl-Ether Polymers	187
4.5.2.2	Polybenzimidazole and SEBS	188
4.5.2.3	Poly(norbornene)	189
4.5.2.4	Diels-Alder Polymer – Polyphenylene	190
4.5.2.5	Poly(aryl piperidinium)s	191
4.5.2.6	Radiation-Grafted AEM	193
4.5.3	Water Management	198
4.5.4	Outlook	198
4.6	Anion Exchange Ionomers	199
4.7	Fuel Cell Vehicle Market	202
4.8	Conclusions and Future Perspectives	204
	References	205

<b>5</b>	<b>Membranes in Energy Storage System</b>	<b>217</b>
5.1	Introduction	217
5.1.1	Li-Ion Battery	217
5.1.1.1	Battery Market, Separator Market	218
5.2	Requirements of Li-Ion Battery Separators	222
5.3	Fabrication of Separator	226
5.3.1	Type of Polymers	226
5.3.2	Type and Fabrication of Separator	226
5.3.2.1	Type of Separator	226
5.3.2.2	Fabrication of Separator	227
5.4	Gel Polymer Electrolytes	233
5.5	Polymers for Separators and Polymer Electrolytes	234
5.5.1	Polyolefin	234
5.5.2	PVDF	234
5.5.3	Poly(vinylidene fluoride-hexafluoro propylene)	238
5.6	Next-Generation Li Battery	239
5.6.1	Li-Air Battery Separator	241
5.6.2	Li-S Battery Separator	242
5.6.3	All Solid-State Li-Ion Battery	243
5.7	Conclusions and Future Perspectives	247
	References	248
<b>6</b>	<b>Membranes in Hydrogen Production by Water Electrolysis</b>	<b>257</b>
6.1	Introduction	257
6.2	Alkaline Water Electrolysis	261
6.2.1	History of Water Electrolysis	261
6.2.2	Alkaline Electrolysis	263
6.2.3	Major Issues	263
6.3	Proton Exchange Membrane Water Electrolysis	264
6.3.1	Advantages of PEMWE	266
6.3.2	Disadvantages of PEMWE	266
6.3.3	Membranes	267
6.3.4	Ionomers	271
6.3.5	Technical Achievements and Applications	273
6.4	Alkaline Exchange Membrane Water Electrolysis	274
6.4.1	Difference Between AWE and AEMWE	276
6.4.2	Liquid Electrolytes	276
6.4.3	Anion Exchange Membranes	277
6.4.3.1	Commercial Membranes	278
6.4.3.2	Chemical Stability of Cationic Groups	290
6.4.4	Ionomers	293
6.4.5	Durability	294
6.4.6	Outlook for AEMWE	296

6.5	Conclusions and Future Perspectives	298
	References	298
<b>7</b>	<b>Membranes for Power Generation</b>	<b>309</b>
7.1	Water Energy Nexus and Membranes	309
7.2	Concept of Osmotic Power	311
7.3	Energy Obtained from PRO	314
7.4	Membranes for Pressure-Retarded Osmosis	317
7.4.1	Cellulose Triacetate Membrane	318
7.4.2	Thin-Film Composite Membrane	318
7.4.3	Importance of Support Membranes	319
7.4.4	Sponge-like Porous Structure of Support	320
7.4.5	Nanofibrous Support Membrane	321
7.4.6	Selective Layer	321
7.5	Hybrid Systems with Membrane Distillation and Others	324
7.5.1	PRO-MD Hybrid System	324
7.5.2	SWRO-PRO Hybrid System	325
7.5.3	SWRO-PRO-MD Trihybrid System	327
7.5.4	Osmotic Heat Engine System	327
7.6	Conclusions and Future Perspectives	328
	References	329
