Contents

Preface *ix*
About the Authors *xi*
Acknowledgment *xiii*
Abbreviations and Symbols *xv*

1 Introduction *1*
1.1 Membrane Development at a Glance *1*
1.2 Two-Dimensional Membranes *1*
1.3 Separation Mechanisms of 2D Membranes *2*
1.4 Fabrication Methods for 2D Membranes *4*
1.5 Applications of 2D Membranes *6*
References *6*

2 Types of 2D Material-Based Membranes *9*
2.1 Porous Two-Dimensional Nanosheet-Based Membranes *9*
2.1.1 Zeolite 2D Membranes *9*
2.1.2 Metal–Organic Framework 2D Membranes *10*
2.1.3 Covalent Organic Framework (COF) 2D Membranes *11*
2.1.4 Graphitic Carbon Nitride (g-C_3N_4) Membranes *12*
2.2 Nonporous 2D Nanosheet-Based Membranes *13*
2.2.1 Graphene-Based Membranes *13*
2.2.2 Layered Double Hydroxide (LDH) Membranes *15*
2.2.3 Transition Metal Dichalcogenide (TMD) Membranes *15*
2.2.4 MXene Membranes (Typically $Ti_3C_2T_x$) *16*
References *18*

3 MXene Nanosheets and Membranes *25*
3.1 Preparation and Characterization of MXene Nanosheets *25*
3.1.1 Top-down Synthesis *25*
3.1.2 Bottom-up Synthesis *31*
3.2 Preparation and Characterization of MXene Membranes *34*
References *40*

4 MXene Membranes for Nanofiltration *43*
4.1 Introduction *43*
4.2 Separation Performance of MXene-Based Nanofiltration Membranes *44*
4.3 Summary *57*
References *57*

5 MXene Membranes for the Isolation of Antibiotics *61*
5.1 Introduction *61*
5.2 Physical Adsorption *62*
5.3 Advanced Oxidation *68*
5.4 Membrane Separation *72*
5.5 Summary *84*
References *84*

6 MXene-Based Membranes for Gas Separation *89*
6.1 Introduction *89*
6.2 Gas Separation Performance of MXene-Based Membranes *90*
6.3 Summary *101*
References *102*

7 MXene Membranes for Ion Separation *105*
7.1 Introduction *105*
7.2 Self-cross-linked MXene Membranes for Monovalent Metal Ion Sieving *106*
7.2.1 Preparation of Self-cross-linked MXene Membranes *106*
7.2.2 Monovalent Metal Ion-sieving Performance of Self-cross-linked MXene Membranes *107*
7.2.3 Characterization of Self-cross-linked MXene Membranes *109*
7.3 Thermally Cross-Linked MXene Membranes for Heavy Metal Ion Separation by a Voltage-supported Process *112*
7.3.1 Mixed-ion Sieving and Exclusion of the Heavy Metal Ion Pb^{2+} *113*
7.3.2 Characterization of Thermally Cross-Linked MXene Membranes *115*
7.4 Ultrathin MXene-Derived Membranes by Sinter-cross-linking with Tunable Interlayer Spacing *117*
7.4.1 Properties and Ion-rejection Performance of Sinter-cross-linked MXene Membranes *117*
7.4.2 Characterization of Sinter-cross-linked MXene Membranes and MXene Nanosheets at Different Sintering Temperatures *120*
7.5 Al^{3+}-cross-linked MXene Membranes *121*
7.5.1 Preparation and Characterization of Al^{3+}-cross-linked MXene Membranes *122*
7.5.2 Ion-sieving Performance of Al^{3+}-cross-linked MXene Membranes *123*
7.6 Summary *126*
References *126*

8 MXene Membrane for Oil/Water Emulsion Separation *129*
8.1 Introduction *129*
8.2 Functional Polymer Layer on Support *130*
8.3 Low-Dimensional Materials *134*
8.4 Summary *151*
References *151*

9 MXene Membranes for Salinity Gradient Energy Conversion *157*
9.1 Introduction *157*
9.2 Performance of MXene Membranes for Salinity Gradient Energy Conversion *158*
9.3 Summary *169*
References *170*

10 Scale-Up of MXene Membranes *175*
10.1 Introduction *175*
10.2 Scale-Up of 2D Membranes *176*
10.2.1 Spin Coating *177*
10.2.2 Spray Coating *177*
10.2.3 Drop Coating and Dip Coating *179*
10.2.4 Doctor Blade Method *179*
10.2.5 Electrophoretic Deposition (EPD) *181*
10.3 Summary *191*
References *192*

11 Perspectives *197*
11.1 Further Applications of MXene Nanosheets *197*
11.2 Challenges and Outlook for MXene Membranes *198*
11.2.1 Stability of MXene Nanosheets Must Be Improved *198*
11.2.2 Scalable Fabrication of MXene Membranes with Suitable Interlayer Channels Is Required *198*
11.2.3 Operating Time of MXene Membranes under Realistic Operation Conditions Must Be Extended *199*
11.2.4 Fundamentals of Mass Transport Mechanisms in Confined Nanochannels/Sub-nanochannels Within MXene Membranes Has to Be Studied *199*
References *200*

Index *203*
