Preface *xiii*

Acknowledgments *xvii*

List of Abbreviations *xix*

About the Author *xxiii*

1	In-Situ TEM	1
1.1	Introduction	1
1.2	General Scope of the Book	2
1.3	Why In-Situ TEM	3
1.4	TEM: Overview	4
1.4.1	Historical Perspective	4
1.4.2	Electron–Sample Interactions	4
1.4.3	Overview of Modern TEM	5
1.4.3.1	Electron Source or Electron Gun	5
1.4.3.2	Lenses	7
1.4.3.3	Lens Aberrations	7
1.4.3.4	Aberration Correctors	9
1.4.4	Data Acquisition Systems	9
1.4.4.1	Types of Detectors	9
1.5	TEM/STEM-Based Characterization Techniques	11
1.5.1	Diffraction	11
1.5.2	TEM Imaging Modes	12
1.5.3	STEM	14
1.5.4	Analytical TEM	14
1.5.4.1	Chemical Analysis	15
1.5.4.2	EFTEM	19
1.5.4.3	Spectrum Imaging (SI)	20
1.6	Other Techniques	20
1.6.1	Lorentz Microscopy	20
1.6.2	Holography	22
1.6.2.1	In-Line Holography	22
1.6.2.2	Off-Axis Holography	22
1.6.3	UEM and DTEM	23

1.7	Introduction to Different Stimuli Used for In-Situ TEM	24
1.7.1	Heating (Chapter 3)	24
1.7.2	Cooling (Cryo TEM – Chapter 4)	24
1.7.3	Interactions with Liquid/Electrochemistry (Chapter 6)	24
1.7.4	Interaction with Gas Environment/Catalysis (Chapter 7)	25
1.7.5	Other Stimuli Not Included in this Book	25
1.7.5.1	Mechanical Testing	25
1.7.5.2	Ion Radiation/Implantation	25
1.7.5.3	Biasing	27
1.7.5.4	Magnetization	28
1.8	Potential Limitations and Cautions	29
1.9	Take-Home Messages	31
	References	31
2	Experiment Design Philosophy	41
2.1	General	41
2.2	Choice of Technique and the Microscope	44
2.2.1	Stimulus and Technique Selection	44
2.2.2	Microscope Selection	45
2.2.2.1	Operating Voltage	45
2.2.2.2	TEM/STEM and Pole-Piece Gap	46
2.2.2.3	Image Acquisition System and Detectors	46
2.2.3	Development or Modification of New Tool	47
2.3	TEM Holder Design and Selection	47
2.4	Specimen Design and Preparation	48
2.4.1	Direct Dispersion on a TEM Grid	48
2.4.2	Sintering Pallets	49
2.4.3	Ultramicrotomy	50
2.4.4	Electropolishing	50
2.4.5	Mechanical and Ion Milling	50
2.4.6	Focused Ion Beam (FIB)	52
2.4.7	Tripod Polishing	54
2.4.8	Cryo Sample Preparation	54
2.5	Guidelines for Experimental Setup	55
2.5.1	Electron Beam Effects	55
2.5.2	Choice of TEM Grid and Support Material	56
2.5.2.1	Reactivity of Sample with Grid and/or Support Material	56
2.5.2.2	Reactivity of TEM Grids Upon Heating	57
2.5.2.3	Reactivity of TEM Grids in Gaseous Environment	58
2.5.2.4	Reactivity of Liquids with the Windows	59
2.5.2.5	Reactivity of Gases/Liquids with the TEM Holder Parts	59
2.5.3	Purity of Gases	60
2.5.4	Liquid Cell Experiments	62
2.5.5	Experiments Using Other Stimuli	63
2.6	Practical Example of Designing In-Situ TEM Experiment	63

2.6.1	Growth of GaN Nanowires Using ETEM	63
2.6.2	Applications of Quantitative Data	64
2.6.2.1	Physical and Materials Science	66
2.6.2.2	Catalysis	67
2.7	Review	67
	References	68
3	In-Situ Heating	77
3.1	History	77
3.2	Currently Available Heating Holders	78
3.2.1	Direct Heating Holder	79
3.2.2	Indirect Heating Holders	79
3.2.2.1	Furnace Heating Holders	79
3.2.2.2	MEMS-Based Heating Holders	82
3.3	Experimental Considerations	84
3.3.1	General	84
3.3.2	Electron Beam	86
3.3.3	Sample Temperature at Nanoscale	88
3.3.4	Specimen Design and Selection	90
3.3.5	Thermal Drift	91
3.4	Select Applications	92
3.4.1	Dislocation Motion	93
3.4.2	Nucleation, Precipitation, and Crystallization	94
3.4.3	Sintering	98
3.4.4	Thermal Stability of Materials	100
3.4.4.1	Alloys	100
3.4.4.2	Core-Shell Structures	100
3.4.4.3	2-D Materials	102
3.4.5	Phase Transformation	102
3.4.6	Materials Synthesis	104
3.5	Limitations and Possibilities	105
3.6	Chapter Summary	106
	References	106
4	In-Situ Cryo-TEM	115
4.1	Historical Perspective	116
4.2	Specimen Holder Design and Function	116
4.3	Specimen Design and Preparation	119
4.4	Practical Aspects of Performing Cryogenic Cooling	121
4.5	Some Noteworthy Applications	122
4.5.1	Mitigating Radiation Damage	123
4.5.1.1	Structure of Polymers	124
4.5.1.2	Structure of MOF and Zeolites	125
4.5.1.3	Cryo-TEM for Energy Materials	126
4.5.1.4	Reactions in Liquids	128

- 4.5.1.5 Quantum and 2-D Materials 129
- 4.5.2 Phase Transformations Below RT 132
- 4.5.3 Correlative In-Situ Experiments at Low Temperature 135
 - 4.5.3.1 Mechanical Testing 135
 - 4.5.3.2 Magnetic Field 136
- 4.6 Benefits and Limitations 137
- 4.7 Chapter Summary 138
 - References 138

- 5 Designing Liquid and Gas Cell Holders 145**
 - 5.1 Historical Perspective 146
 - 5.2 Design Philosophy 146
 - 5.3 Windows 149
 - 5.3.1 Image Resolution: Thickness and Material Properties of the Windows 149
 - 5.3.2 Strength and Flexibility 150
 - 5.3.3 Tolerance for the Pressure Difference 151
 - 5.3.4 Inert or Corrosion Resistant 153
 - 5.4 Microfabricated Window Cell (Microchips) 154
 - 5.4.1 Static Cells 157
 - 5.4.2 Flow Cells 159
 - 5.4.3 Incorporation of Other Stimuli 161
 - 5.4.4 Monolithic Microchips 162
 - 5.5 Examples of Modified Window Holders 163
 - 5.5.1 Redesigning the Microchips for Commercial Holder 164
 - 5.5.2 Modified Window Microchips and TEM Holder Combination 166
 - 5.5.3 Non-window Cell Holder to Incorporate Other Stimuli 166
 - 5.6 Take Home Message 167
 - References 168

- 6 In-Situ Solid-Liquid Interactions 173**
 - 6.1 Historical Perspective 173
 - 6.2 Holder Design and Selection 175
 - 6.2.1 Closed Cells 175
 - 6.2.1.1 Graphene Cells 175
 - 6.2.1.2 Microfabricated Window Cell 178
 - 6.2.2 Limitations of Closed Cells and Need for External Stimuli 178
 - 6.2.3 Flow Reactors: Microfluidic Design 178
 - 6.2.4 Electrochemical Cell: Biasing 181
 - 6.2.5 Heating in Liquids 182
 - 6.3 Specimen Design and Preparation 184
 - 6.4 Data Acquisition 185
 - 6.5 Practical Challenges 185
 - 6.5.1 Sample Loading 185

6.5.2	Electron Beam Effects	187
6.5.3	Windows Bulging	188
6.5.4	Interaction of Sample with Windows	189
6.6	Select Examples of Applications	190
6.6.1	Nucleation and Growth of Nanoparticles	190
6.6.2	Corrosion/Oxidation	192
6.6.3	Galvanic Replacement Reactions	193
6.6.4	Growth of Core–Shell Nanoparticles	194
6.6.5	Soft Nanomaterials Analyzed by In-Situ Liquid TEM	195
6.6.6	Quantitative Electrochemical Measurements	197
6.6.7	Battery Research	198
6.6.7.1	Open Cell	199
6.6.7.2	Closed Liquid Cell	200
6.7	Limitations	201
6.8	Take-Home Messages	202
	References	203
7	In-Situ Gas–Solid Interactions	215
7.1	Historical Perspective	215
7.2	Current Strategies	218
7.2.1	Window Holders	218
7.2.1.1	Incorporation of Other Stimuli	221
7.2.1.2	Specimen Design and Preparation	221
7.2.1.3	Practical Challenges for Gas-Cell Holders	221
7.2.1.4	Review of Benefits and Limitations of Gas-Cell Holders	222
7.2.2	Environmental Microscopes (Open Cell)	223
7.2.2.1	ETEM Combined with Gas Injection Sample Holder	223
7.2.2.2	Differentially Pumped TEM	224
7.3	Gas Manifold Design and Construction	227
7.4	Practical Aspects of Performing Experiments in Gas Environment	228
7.4.1	Electron Beam Effects	229
7.4.2	Gas Pressure and Resolution	231
7.4.3	Sample Temperature and Cell Pressure	232
7.4.4	Anticontamination Device	233
7.5	Select Examples of Applications	234
7.5.1	Effect of Gas Environment on Catalyst Nanoparticles	234
7.5.2	Carbon Nanotube (CNT) Growth	236
7.5.3	Nanowire Growth	237
7.5.4	Electron-Beam-Induced Deposition	238
7.5.5	REDOX Reactions	239
7.5.6	Gas Adsorption Sites	241
7.6	Review of Benefits and Limitations	243
7.7	Take-Home Messages	244
	References	245

8	Multimodal and Correlative Microscopy	255
8.1	Multimodal TEM	256
8.1.1	Parallel Ion Electron Spectrometry (PIES)	257
8.1.2	Hybrid Microscope	258
8.1.3	Alternatives to Free Space Approach	260
8.1.4	Introducing Light for Other Applications	263
8.1.4.1	Through Sample Chamber Port	263
8.1.4.2	Through Sample Holder	264
8.1.5	Laser Alignment	269
8.2	Correlative Approaches	269
8.2.1	TEM and SEM	270
8.2.2	Electron and X-ray Microscopies and Spectroscopies	272
8.2.2.1	Portable Reactor for Various Platforms	274
8.2.2.2	Independent Correlative Measurements	278
8.3	Take Home Messages	280
	References	280
9	Data Processing and Machine Learning	285
9.1	History of Image Simulation and Processing	285
9.1.1	Image Simulations	286
9.1.2	Image Processing	286
9.2	Current Status	289
9.2.1	Progress for Image Simulations	289
9.2.2	Progress in Data (Image) Processing	290
9.3	Data Management	291
9.4	Data Processing and Machine Learning (ML)	292
9.4.1	What Is Machine Learning?	293
9.4.1.1	Unsupervised ML	293
9.4.1.2	Supervised ML	294
9.4.2	Motivation	296
9.4.3	Current Status	298
9.5	Select Applications	300
9.5.1	Noise Reduction	300
9.5.2	Structure Determination	301
9.5.2.1	Diffraction Pattern Analysis	302
9.5.2.2	Image Analysis	303
9.5.2.3	Atomic Column Heights (3-D Structure)	305
9.5.2.4	Other Applications	305
9.6	Future Needs	307
9.7	Limitations	309
9.8	Take Home Messages	309
	References	310

10	Future Vision	317
10.1	Historical Aspect	318
10.2	Current Status	318
10.2.1	ETEM	318
10.2.2	UEM and DTEM	319
10.2.3	Stroboscopic TEM	319
10.2.4	PIES	319
10.3	Technical Challenges	319
10.3.1	List of Major Workshops	320
10.3.2	Open Challenges and Technical Roadmaps	323
10.3.2.1	Specific for Battery Research	323
10.3.2.2	Specific for Liquid-Cell TEM	324
10.3.2.3	Specific for Catalysis	324
10.3.2.4	Specific for Quantum Materials	325
10.4	Developing Relevant Strategies	326
10.4.1	Modifying Base TEM/STEM Unit	327
10.4.2	TEM Holders with Multiple Stimuli	332
10.4.3	Automation and Autonomous Operation	336
10.4.3.1	Automation	336
10.4.3.2	Autonomous Experiments	338
10.5	Take Home Messages	340
	References	340
	Index	349
