

Contents

1	Introduction	1
1.1	A Short Definition of Laboratory Automation	1
1.2	Short History of Laboratory Automation	2
1.2.1	Early Developments in Laboratory Automation	2
1.2.2	Advances in the Automation of Clinical Laboratories	5
1.2.3	Developments in Pharmaceutical Research	6
1.3	Laboratory Applications and Requirements	9
1.3.1	Bioscreening and Pharmaceutical Testing	9
1.3.1.1	Enzymatic Assays	9
1.3.1.2	Cell-Based Assays	10
1.3.1.3	ELISAs	11
1.3.1.4	DNA/RNA Extraction, Purification, and Quantification	12
1.3.1.5	PCR/RT-PCR/q-PCR	12
1.3.1.6	Gene Expression Analysis	13
1.3.1.7	Next-Generation Sequencing	13
1.3.1.8	Cell Culturing	13
1.3.1.9	Requirements	14
1.3.2	Clinical Applications	15
1.3.2.1	Determination of Classical Parameter	15
1.3.2.2	Determination of Vitamins	18
1.3.2.3	Determination of Drugs of Abuse	19
1.3.2.4	Requirements	21
1.3.3	Classical Analytical Applications	23
1.3.3.1	Food Analysis	23
1.3.3.2	Environmental Analysis	26
1.3.3.3	Requirements	27
1.4	The Goal of this Book	30
	References	32
2	Basic Concepts and Principles of Laboratory Automation	41
2.1	The LUO Concept in Laboratory Automation	41
2.1.1	Laboratory Unit Operation Concept	41

2.1.2	Classes of Laboratory Systems and Devices	42
2.1.3	General Automation Strategies in Laboratory Automation	45
2.2	Advantages and Limitations of Laboratory Automation	50
2.2.1	Advantages of Laboratory Automation	50
2.2.2	Limitations of Laboratory Automation	53
2.2.3	Error Handling in Laboratory Automation	54
2.3	Economic Potential of Laboratory Automation	55
2.3.1	Market Dynamics	55
2.3.2	Market Shares by Region	56
2.3.3	Market Shares by Application	62
2.3.4	Market Shares by Users	64
2.3.5	Market Share by Vendors	65
	References	66

3 Formats in Laboratory Automation 69

3.1	Formats in Biological Applications	69
3.1.1	Introduction	69
3.1.2	Characteristics of Microplates	70
3.1.3	Lids and Sealing Systems for Microtiter Plates	76
3.1.3.1	Lids	77
3.1.3.2	Foils and Films	77
3.1.3.3	Mats	80
3.1.3.4	RoboLid	80
3.1.3.5	Advantages and Disadvantages of Locking Systems	81
3.1.3.6	Application Areas of Locking Systems	82
3.1.4	Market Potential and Commercially Available Systems	82
3.1.4.1	Microtiter Plates Market	82
3.1.4.2	Market Lids and Sealing Systems	83
3.2	Formats in Clinical Applications	88
3.2.1	Collection of Blood Samples	90
3.2.2	Collection of Urine Samples	91
3.2.3	Collection of Further Examination Material	91
3.3	Formats in Classical Analytical Applications	94
3.4	Automated Handling of Labware	97
3.4.1	Automated Handling of MTP and Covers	97
3.4.1.1	Handling of Microtiter Plates and Lids	97
3.4.1.2	Automated Handling of Foils and Films	97
3.4.2	Automated Handling of Single Samples	100
3.4.2.1	Automated Transport	100
3.4.2.2	Automated Opening/Closing of Single Samples	104
	References	107

4 Liquid Handling in Laboratory Automation 111

4.1	Introduction	111
4.1.1	Definition and General Introduction	111

4.1.2	Short History of Liquid Handling	112
4.1.3	Use of Liquid Handling Systems	115
4.2	Liquid Handling Technologies	116
4.2.1	Pipetting Technologies	116
4.2.2	Aspiration Methods	119
4.3	Critical Liquid Handling Parameters and Error Sources in Liquid Handling	121
4.3.1	Important Liquid Handling Parameters	121
4.3.2	Physical Influencing Factors	123
4.3.3	Error Sources in Liquid Handling	126
4.3.4	Liquid Handling Performance Monitoring	129
4.4	Market Potential and Systems	132
4.4.1	Market Potential for Liquid Handling Systems	132
4.4.2	General Channel Configurations	134
4.4.3	Liquid Handling Systems with 1–8 Channels	136
4.4.4	Multichannel Systems	144
4.4.5	Liquid Handling Accessories	149
	References	150
5	Low-Volume Liquid Delivery	155
5.1	Introduction	155
5.2	Contact-Based Dispenser Technologies	158
5.2.1	Pin Tools	158
5.2.2	Dispensers with Fixed Tips	159
5.2.3	Dispensers with Disposable Tips	159
5.2.4	Summary	160
5.3	Contactless Dispenser Technologies	161
5.3.1	Displacement Dispensers	161
5.3.1.1	Peristaltic Pumps	161
5.3.1.2	Ceramic Pumps	161
5.3.2	Valve-Based Dispensers	162
5.3.2.1	Solenoid Valve Dispensers	163
5.3.2.2	Piezoelectric Valve-Based Dispensers	164
5.3.3	Capillary Sipper	164
5.3.4	Acoustic Dispensers	164
5.3.5	Summary	165
5.4	Application Areas and Requirements for Low-Volume Dispensing	167
5.4.1	Application Areas for Low-Volume Dispensing	167
5.4.2	Requirements for Low-Volume Dispensing	168
5.5	Overview of Low-Volume Dispensers	170
5.5.1	Positive Displacement Systems	170
5.5.2	Piezoelectric Dispenser	170
5.5.3	Acoustic Dispensers	173
5.5.4	Additional Systems	176
	References	177

6	Solid Dispensing	181
6.1	Introduction	181
6.2	Factors Influencing the Dosing of Solids	183
6.2.1	Flow Behavior of Bulk Solids	184
6.2.2	Density of Solids	185
6.2.3	Fluidization of Bulk Materials	186
6.3	Solid-Dispensing Technologies	186
6.3.1	Volumetric Dosing Methods	186
6.3.2	Gravimetric Dosing Methods	188
6.3.3	Dosing Methods in Laboratory Automation	189
6.4	Solid Dispensing Systems	190
	References	198
7	Devices for Sample Preparation	201
7.1	Introduction	201
7.2	Automated Heating, Cooling, and Mixing	204
7.2.1	Introduction	204
7.2.2	Automated Heating and Cooling	205
7.2.3	Automated Thermocycler	209
7.2.4	Automated Mixing/Shaking	213
7.2.4.1	Introduction	213
7.2.4.2	Automated Shaking	216
7.2.4.3	Automated Stirring	217
7.2.5	Combined Solutions for Mixing and Temperature Control	219
7.3	Automated Incubation	221
7.3.1	Introduction	221
7.3.2	Important Parameter	222
7.3.3	Incubation Systems in the Laboratory	224
7.3.4	Market Situation	226
7.4	Automated Centrifugation	230
7.4.1	Introduction	230
7.4.2	Requirements	233
7.4.3	Market Situation and Systems	235
7.5	Automated Filtration	237
7.6	Automated Solid Phase Extraction	240
7.6.1	Introduction and Requirements	240
7.6.2	Semiautomated Systems	241
7.6.3	Requirements for Automated SPE Systems	242
7.6.4	Automated Single Sample Processing Systems	243
7.6.5	Automated Parallel Processing Systems with Limited Parallelity	245
7.6.6	High Parallel Systems	247
7.6.7	Labware for Automated Solid Phase Extraction	250
7.7	Automated Sonication	256
7.7.1	Basics and Applications of Ultrasonic Systems	256
7.7.2	Market Situation and Systems	258

7.8	Automated Evaporation	262
7.8.1	Introduction	262
7.8.2	Evaporation Technologies and Application Areas	262
7.8.3	Market Situation	264
	References	269
8	Robots in Laboratory Automation	281
8.1	Robots – A Definition	281
8.1.1	Historical Development of Laboratory Robotics	281
8.1.2	Basics and Definitions in Robotics	282
8.1.3	Robotic Configurations	285
8.1.4	Robot Programming	287
8.1.5	Advantages and Disadvantages of Laboratory Robots	288
8.2	Stationary Robots in Laboratory Automation	289
8.2.1	Industrial and Collaborative Robots	289
8.2.2	Market Potential	292
8.2.3	Available Stationary Robot Systems	294
8.3	Mobile Robots	300
8.3.1	Differentiation Between Stationary and Mobile Robots	300
8.3.2	Application Scenarios for Mobile Robots	300
8.3.3	Sensor Systems in Mobile Robotics	302
8.3.4	Market Situation and Available Systems	303
8.4	Gripper Systems	308
8.4.1	Mechanical Gripper	308
8.4.2	Pneumatic Gripper	310
8.4.3	Magnetic Gripper	311
8.4.4	Adaptive Gripper	311
8.4.5	Sensors and Safety Systems in Gripper Systems	314
8.5	Safety Aspects in Laboratory Automation	316
	References	318
9	Analytical Measurement Systems	321
9.1	Absorption-Based Methods	321
9.1.1	Introduction	321
9.1.2	Physical Background	321
9.1.3	Application Areas of Absorption Spectroscopy	322
9.2	Fluorescence-Based Methods	327
9.2.1	Introduction	327
9.2.2	Physical Background	327
9.2.3	Application Areas of Fluorescence Spectroscopy	330
9.3	Market Situation and Available Reader Systems	333
9.4	Mass Spectrometric Methods	342
9.4.1	Introduction	342
9.4.2	Physical Background	343
9.4.2.1	Ionization	343

- 9.4.2.2 Mass Separation Technologies 346
- 9.4.2.3 Detection Technologies 347
- 9.4.3 Application Areas of Mass Spectrometric Methods 348
- 9.4.4 Market Situation and Mass Spectrometry Systems 351
- References 374

10 Sample Identification in Laboratory Automation 385

- 10.1 Introduction 385
- 10.2 Barcode Technology 387
 - 10.2.1 Barcode Types 388
 - 10.2.2 Barcode Reader Technology 392
 - 10.2.3 Barcodes in Laboratory Automation 394
 - 10.2.4 Market Situation for Barcode Readers 400
- 10.3 RFID Technology 402
 - 10.3.1 RFID Methods 402
 - 10.3.2 Application Areas and Design of RFID Systems 404
 - 10.3.3 Advantages and Disadvantages of RFID Systems 408
 - 10.3.4 Market Situation 409
 - References 412

11 Interfaces in Laboratory Automation 415

- 11.1 Introduction 415
- 11.2 Analog Interfaces 415
- 11.3 Digital Interfaces 416
 - 11.3.1 Parallel Interfaces 416
 - 11.3.2 Serial Interfaces 418
 - 11.3.3 Network Interfaces 421
- 11.4 Standardization in Laboratory Automation 424
 - 11.4.1 Introduction 424
 - 11.4.2 SiLA 2 Standard 425
 - 11.4.3 Advantages of SiLA 2 427
 - 11.4.4 Disadvantages of SiLA 428
 - 11.4.5 Actual Examples for SiLA Integrations 428
 - References 433

12 Laboratory Automation Software 435

- 12.1 Introduction 435
- 12.2 System Control Software/Process Control Systems 435
 - 12.2.1 Introduction 435
 - 12.2.2 Cellario 438
 - 12.2.3 Green Button Go 440
 - 12.2.4 Momentum 441
 - 12.2.5 OneLab 442
 - 12.2.6 Overlord 443
 - 12.2.7 SAMI EX 444

12.2.8	VWorks	446
12.2.9	Hierarchical Workflow Management System (HWMS)	447
12.2.10	Summary	448
12.3	Laboratory Information Management Systems	449
12.3.1	Introduction	449
12.3.2	Core Functionalities of LIMS	450
12.3.3	LIMS Architectures	452
12.3.4	Factors Influencing the Selection of a LIMS	454
12.3.5	LIMS Vendors	465
12.4	Electronic Laboratory Notebooks	466
12.4.1	Introduction	466
12.4.2	Regulations and Legal Aspects	467
12.4.3	Functionality of ELN	468
12.4.4	Factors Influencing the Selection of an ELN	468
12.4.5	ELN Vendors	470
12.5	Laboratory Execution Systems (LES)	470
12.5.1	Introduction	470
12.5.2	LES Vendors	479
12.6	Scientific Data Management Systems (SDMS)	479
12.6.1	Introduction	479
12.6.2	SDMS Vendors	480
12.7	Additional Laboratory Automation Software	481
	References	482
	Index	487
