

## Index

### **a**

absorption spectrophotometry 29, 179  
 accuracy and precision 8, 9, 212, 230, 306  
 additive calibration methods  
   isotope dilution method  
     modified procedures 197–199  
     radiometric isotope dilution 182–189  
   standard addition method  
     extrapolative variant 144–155  
     indicative variant 167–172  
     interpolative standard addition method (I-SAM) 162, 164–167  
     modified procedures 155–162  
     titration 172–180  
 additive interference effects 18, 54, 99, 118, 295–311  
 additive methods 8, 85, 144, 164, 208, 209, 239, 263, 354  
 alkacimetric titration 179  
 analyte determinations 20, 106, 133, 151, 177, 227, 230, 249, 253  
 analyte isolation 96, 314  
 analytical calibration 2–8, 12, 14, 143, 173, 220, 314, 359, 360  
 analytical chemistry 313  
 analytical methods 2, 7, 16, 17, 21–24, 28–30, 97, 111, 120, 155, 172, 203, 220, 359  
 analytical procedures 2, 23, 172, 361  
 analytical reference method 21

analytical result 1, 5, 7–9, 17–24, 50, 52, 57, 85, 88, 97, 105, 111, 120–127, 147, 160–165, 236, 237  
 analytical signal 2, 4–6, 9, 10, 16, 27, 29, 36, 43, 73, 93–95  
 anodic stripping voltammetry (ASV) 41, 303  
 atomic absorption spectrometry (AAS) 2, 36  
 atomic fluorescence spectrometry (AFS) 109, 320  
 auxiliary model function 4

### **b**

$\beta$ -cyclodextrin 55  
 biological standard 27  
 blank effect 10, 94, 99, 107, 108, 150, 151, 291, 296  
 Boltzmann-coefficient 37  
 bracketing technique 109, 110  
 Bragg's equation 31

### **c**

calcium 121–124, 238, 247–250, 294, 338–341, 344, 354  
 calcium-aluminum system 343  
 calcium determination 248, 294  
 calibratability 359  
 calibration approaches 86, 181, 226, 233–286, 364  
 calibration-free analysis  
   empirical calibration 26–30  
   theoretical calibration 30–44

- calibration fundamentals
    - analytical calibration 2–5
    - measurement errors 8–14
    - procedures and methods 7–8
    - qualitative analysis 14–18
    - quantitative analysis 18–22
    - rules for calibration 22–24
    - standards and models 5–7
  - calibration methods 8, 119, 362
    - isotope dilution method
      - isotope dilution mass spectrometry 189–199
  - calibration procedure 176
  - calibration process 359
  - calibration-related experiments
    - calibration model function mapping 337
    - interference effects 337–342
    - measurement random errors 337
    - multicomponent analysis 347–356
    - orthogonal factorial experimental plans 336
    - real functions 342–347
  - calibration standard 4
  - certified reference materials (CRM's) 97
  - chemical analysis 359
  - chemical H-point standard addition method (C-HPSAM) 305
  - chemical standards 6, 29
  - chemometric methods 18, 58, 68, 69
  - chromogenic reagent 255
  - comparative calibration methods
    - external calibration methods 103–110
    - internal calibration methods 125–141
    - modified procedures 110–115
  - comparative methods 8, 71, 85
  - compensation 12
  - complementary dilution method (CDM) 261
  - complex calibration approaches
    - extrapolative methods 233–252
    - generalized calibration strategy 270–280
    - integrated calibration methods 256–270
    - mixed methods 252–256
    - standard dilution analysis 280–286
  - concentration intervals 342
  - conventional ECM method 115
  - conventional integrated method 259, 261
  - correlation coefficient 91

  - electrothermal technique 242
  - ELISA procedure 79
  - empirical calibration 5, 100, 360, 363
  - empirical model functions 6, 23, 28–30
  - empirical sensory model 27
  - energy dispersive X-ray analysis (EDX) method 64
  - enzyme-linked immunosorbent assay (ELISA) 79
  - E-SAM method 153, 161, 317, 362, 363
  - experimental data 316
  - external standard method (ECM) 49–51, 151, 155, 157, 194, 223, 297, 314, 361
  - extraction phase 316
  - extrapolation method (E-SAM) 145
    - extrapolative dilution method 244–252
    - extrapolative indirect method 234–239
    - extrapolative internal standard method 239–244
  - extrapolative procedure 301–308

extrapolative standard addition method  
(E-SAM) 146

## **f**

Faraday's law 35, 36  
Fisher-Scedecor test 91  
fixed models 30–36  
flame atomic absorption spectrometry  
(FAAS)  
assay 294  
determination 251  
technique 237, 248  
flame photometry 39, 155  
flexible models 30, 36–44  
flow injection analysis  
gradient technique 212–220  
manipulation techniques 205–212  
fully rotary valve (FRV) 206, 211, 351,  
352

## **g**

generalized calibration method (GCS)  
271–274  
generalized H-point standard addition  
method (G-HPSAM) 303, 304  
generalized standard addition method  
(GSAM) 352, 354, 355  
gradient ratio calibration method (GRCM)  
246, 247, 292  
graphite furnace atomization (GFAAS)  
37, 38  
gravimetric method 28, 29  
GSAM method 353, 354

## **h**

high-performance liquid chromatography  
(HPLC) analysis 54  
H-point standard addition method  
(HPSAM) 301

## **i**

ICP-MS analysis 131, 194  
indirect method 71, 133–135, 137  
indirect photometric detection (IPD) 78  
infrared (IR) spectrometry 30

initial measurement sensitivity 160  
instrumental effect 10  
instrumental qualitative analysis 51  
integrated calibration methods 256–259,  
262  
integrated procedure 308–311  
intensity ratio value 126  
interference effect (IE) 10, 94, 95, 141,  
228, 249, 268, 289, 325, 337, 338,  
340–342, 361, 362  
detection and compensation of  
295–300  
detection and examination of 290–294  
internal calibration methods 71–80  
internal standard (IS) 71, 125, 127  
International Union of Pure and Applied  
Chemistry 3  
interpolation 157, 165, 209, 213, 223, 237  
interpolative standard addition method  
(I-SAM) 162, 164–167  
isotope dilution mass spectrometry  
189–199  
isotope ratio mass spectrometry (IRMS)  
198  
isotopic dilution mass spectrometry  
(IDMS) 26  
isotopic dilution method 144  
IUPAC recommendations 314

## **j**

Joint Committee for Guides in Metrology  
(JCGM) document 3
