

## Contents

**Preface** *xi*

**List of Abbreviations** *xiii*

### **1 From Anion Recognition to Organocatalytic Chemical Reactions** *1*

*Friedemann Dressler and Peter R. Schreiner*

- 1.1 Introduction and Background *1*
  - 1.1.1 Evolution of Thiourea-Based Catalysts *10*
  - 1.1.2 Evolution of Triazole-Based Catalysts *22*
  - 1.1.3 Progress on Halogen-Binding-Based Catalysts *25*
  - 1.1.4 Miscellaneous Anion-Binding Catalysts *26*
- 1.2 Concepts in Anion-Binding Catalysis *31*
  - 1.2.1 Introduction *31*
  - 1.2.2 Anion-Binding Catalysis in Addition Reactions *36*
  - 1.2.3 Anion-Binding Catalysis in Substitution Reactions *44*
  - 1.2.4 Anion Binding in Cooperative Catalysis *54*
  - 1.2.5 Anion-Binding in Lewis Acid Enhancement Catalysis *57*
  - 1.2.6 Anion-Binding in Phase Transfer Catalysis *59*
- 1.3 Summary and Outlook *62*
  - Acknowledgment *63*
  - References *64*

### **2 Anion Recognition and Binding Constant Determination** *79*

*Edward G. Sheetz, David Van Craen, and Amar H. Flood*

- 2.1 Introduction to Supramolecular Chemistry and Binding Constant Determination *79*
  - 2.1.1 Chapter Overview *79*
  - 2.1.2 Supramolecular Chemistry and Its Connection to Anion-Assisted Catalysis *80*
  - 2.1.3 Brief History of Advances in Supramolecular Anion Binding *84*
  - 2.1.4 Predicting the Model of Association and Simulating the Expected Species Distribution Profiles and Binding Curves *86*

2.2	Equilibrium Constants, Binding Curves, Titration Conditions, and Errors	87
2.2.1	Physical Origins of Equilibrium Binding Constants	87
2.2.2	Explanation of the Basis for Titration Techniques and Binding Curves	88
2.2.3	Hirose's Rule and Picking the Right Concentration, Solvent, and Technique	89
2.2.4	Error Determination	92
2.3	Experimental Techniques: NMR Spectroscopy	92
2.3.1	When to Use	92
2.3.2	Slow Exchange vs. Fast Exchange	93
2.3.3	Determination of the Underlying Equilibria	94
2.3.4	Software for Non-linear Regression Fitting	95
2.3.5	Common Issues	97
2.4	Experimental Techniques: UV-Vis Spectroscopy	97
2.4.1	When to Use	97
2.4.2	Physical Origins of Optical Phenomena	97
2.4.3	Software for Non-linear Regression Analysis of UV-Vis Titrations	98
2.4.4	Common Issues	99
2.5	Underappreciated Concerns in Binding Constant Determination: Multiple Binding Equilibria	99
2.5.1	When to Expect Additional Equilibria	99
2.5.2	How to Diagnose Additional Equilibria	100
2.5.3	How to Account for Additional Equilibria	101
2.6	Underappreciated Concerns in Binding Constant Determination: Ion Pairing	102
2.6.1	When to Expect Ion Pairing	102
2.6.2	Role of Solvent and Concentration in Ion Pairing	103
2.6.3	How to Diagnose Ion Pairing	103
2.7	Underappreciated Concerns in Binding Constant Determination: Kinetic Processes	104
2.8	Connecting Equilibrium Constants to Structures and Catalysis	104
2.9	Conclusion	105
	Acknowledgment	105
	References	105
<b>3</b>	<b>(Thio)urea and Squaramide-Catalyzed Anion-Binding Catalysis with Halogen Anions</b>	<b>111</b>
	<i>Matthew A. Horwitz and Véronique Gouverneur</i>	
3.1	Introduction	111
3.2	History and Background	111
3.3	Asymmetric Catalysis by Catalyst Association with the Electrophile	113
3.3.1	Examples Utilizing the <i>N</i> -Acyliminium Chloride Ion Pair	113
3.3.1.1	Pictet-Spengler Reaction and Variants	113

- 3.3.1.2 Intramolecular Cyclizations with Other (Hetero)aromatic Nucleophiles 115
- 3.3.1.3 Intramolecular and Intermolecular aza-Sakurai Reaction 116
- 3.3.1.4 Mannich Reaction and Variants 120
- 3.3.1.5 Petasis-Type Reactions 121
- 3.3.2 Examples Utilizing Electrophiles Other than *N*-Acyliiminium Ion Precursors 123
  - 3.3.2.1 Utilization of Oxocarbenium and Pyrone Intermediates 123
  - 3.3.2.2 Glycosylation Reactions Utilizing HBD–Halide Binding 126
  - 3.3.2.3 Utilization of Non-heteroatom-Stabilized Carbocations as Electrophiles 127
- 3.4 Asymmetric Catalysis by Catalyst Association with the Nucleophile 129
  - 3.4.1 Catalyst–Nucleophile Association in Phase-Transfer Catalysis 130
    - 3.4.1.1 Investigation of Hydrogen-Bonded Fluoride: Structure and Reactivity 130
    - 3.4.1.2 Development of Hydrogen-Bonding Phase-Transfer Catalysis (HBPTC) 130
    - 3.4.1.3 Development of Acyl-Transfer Catalysis with Hydrogen-Bonded Fluoride 134
  - 3.4.2 Catalyst–Nucleophile Association in Homogeneous Catalysis 135
- 3.5 Conclusions and Outlook 136
  - Acknowledgments 137
  - References 137
- 4 Chiral Ureas, Thioureas, and Squaramides in Anion-Binding Catalysis with Co-catalytic Brønsted/Lewis Acids 141**  
*Adam Trotta and Eric N. Jacobsen*
  - 4.1 Introduction 141
  - 4.2 Carboxylic Acid Co-catalysts 141
  - 4.3 Sulfonic Acid Co-catalysts 148
  - 4.4 Mineral Acid Co-catalysts 152
  - 4.5 Lewis Acid Co-catalysts 155
  - 4.6 Conclusions and Outlook 157
  - References 157
- 5 Anion-Binding Catalysis with Other Anions 161**  
*Sankash Mitra and Santanu Mukherjee*
  - 5.1 Introduction 161
  - 5.2 Cyanide Anion 162
    - 5.2.1 Strecker Reaction 163
    - 5.2.2 Acylcyanation of Imines 168
  - 5.3 Oxygen-Based Anions 169
    - 5.3.1 Alkoxides and Enolates 169
    - 5.3.2 Enolates of Lactones, Cyclic Anhydrides, and Imides 174
    - 5.3.3 Carboxylates 182

- 5.4 Conclusions and Outlook 192  
References 193
- 6 Silanediols, Phosphoramides, and Other OH- and NH-Based H-Donor Catalysts 201**  
*Alexandria Leveille and Anita Mattson*
- 6.1 Introduction 201
- 6.2 Silanediols 201
- 6.2.1 Introduction 201
- 6.2.2 Overview of Silanols in Anion Binding and Catalysis 202
- 6.2.3 Silanediol Anion-Binding Catalysis 203
- 6.2.4 Alkoxysilanediol Anion Binding Catalysis 207
- 6.3 Siloxanes 208
- 6.4 Thiophosphoramides 210
- 6.5 Cyclodiphosphazanes 213
- 6.6 Other Examples 215
- 6.6.1 Xanthene–Diamine Scaffold 215
- 6.6.2 Croconamides 216
- 6.6.3 Pyrrole-Based Anion-Binding Catalyst 217
- 6.6.4 Bisamidine Catalysts 217
- 6.7 Conclusions 218  
References 218
- 7 1,2,3-Triazoles and 1,2,3-Triazolium Ions as Catalysts 221**  
*Kohsuke Ohmatsu and Takashi Ooi*
- 7.1 Introduction 221
- 7.2 Triazole-Based Anion-Binding Molecular Catalysts 224
- 7.3 Triazolium Ions as Organic Molecular Catalysts with Anion-Binding Ability 231
- 7.4 Triazolium Ions in Dual Functional Catalysts 240
- 7.5 Conclusion 241  
References 242
- 8 Quaternary Ammonium, Phosphonium, and Tertiary Sulfonium Salts as Hydrogen-Bonding Catalysts 249**  
*Seiji Shirakawa*
- 8.1 Introduction 249
- 8.2 Hydrogen-Bonding Ability of Quaternary Ammonium Salts 249
- 8.3 Hydrogen-Bonding Catalysis of Quaternary Ammonium Salts 251
- 8.4 Hydrogen-Bonding Catalysis of Quaternary Phosphonium Salts 257
- 8.5 Hydrogen-Bonding Catalysis of Tertiary Sulfonium Salts 260
- 8.6 Conclusion 264  
References 264

- 9 Assisted and Dual Anion Binding in Amino and Nucleophilic Catalysis 271**  
*Efraim Reyes, Qui-Nhi Duong, Liher Prieto, Olga García Mancheño, and José L. Vicario*
- 9.1 Dual Amino/H-Bond Donor Catalysis 271
- 9.1.1 Enamine Activation 272
- 9.1.2 Dienamine Activation 276
- 9.1.3 Iminium Ion Activation 278
- 9.1.4 Vinylogous Iminium Ion Activation 283
- 9.2 Thiourea – Pyridine-Based Nucleophilic Dual Catalysis 284
- 9.2.1 Kinetic Resolution and Desymmetrization of Amines 284
- 9.2.2 Asymmetric Steglich Rearrangement 290
- 9.2.3 Other Acylation Reactions 296
- 9.2.4 Anion-Binding-Assisted Polymerization Reactions 296
- 9.3 Conclusions 298
- References 299
- 10 Anion-Binding Catalysis by Halogen, Chalcogen, Pnictogen, and Tetrel Bonding 307**  
*Raffaella Papagna, Lukas Vogel, and Stefan M. Huber*
- 10.1 History of Halogen Bonding 307
- 10.2 History of Chalcogen Bonding 310
- 10.3 History of Pnictogen and Tetrel Bonding 314
- 10.4 Differences Between Hydrogen Bonding and Other Secondary Interactions 315
- 10.5 Secondary Bonding in Anion Recognition 316
- 10.6 Halogen Bonding in Anion-Binding Catalysis 322
- 10.7 Chalcogen Bonding in Anion-Binding Catalysis 328
- 10.8 Pnictogen and Tetrel Bonding in Anion-Binding Catalysis 331
- 10.9 Conclusion 333
- References 334
- 11 New Trends and Supramolecular Approaches in Anion-Binding Catalysis 345**  
*María C. Pérez-Aguilar, Melania Gómez-Martínez, Jan Kuhlmann, and Olga García Mancheño*
- 11.1 General Introduction 345
- 11.2 Dual Photoredox and Anion-Binding Catalysis 345
- 11.3 Combination of Metal and Anion-Binding Catalysis 351
- 11.3.1 Anion-Binding Assisted Hydrogenation Reactions 351
- 11.3.2 Hydroformylation Reactions 355
- 11.3.3 Anion-Binding – Metal-Catalyzed C–C Forming Reactions 358
- 11.4 Supramolecular Approaches Involving Anion-Binding Catalysis 359

11.4.1	Mechanically Interlocked Molecules in Anion-Binding Catalysis	359
11.4.1.1	Molecular Knots as Anion-Binding Catalysts	360
11.4.1.2	Rotaxanes as Anion-Binding Catalysts	363
11.4.2	Molecular Motors in Anion-Binding Catalysis	364
11.4.3	Macrocycles in Anion-Binding Catalysis	365
11.5	Anion- $\pi$ Catalysis	368
11.5.1	Anion- $\pi$ -Catalyzed Kemp Elimination Reaction	369
11.5.2	Anion- $\pi$ Interactions in Enolate Chemistry	370
11.5.3	Epoxide-Opening – Ether Cyclization Reactions	372
11.5.4	Enantioselective Anion- $\pi$ Catalysis	373
11.5.5	Miscellaneous	376
11.6	Conclusion and Outlook	376
	References	377
