Preface *xv*

About the Authors *xvii*

1	Introduction to Membrane Technology	1
	<i>Mohammad Younas and Mashallah Rezakazemi</i>	
1.1	Overview of Membrane Technology	1
1.2	Conventional Membrane Separation Processes	2
1.2.1	Microfiltration (MF)	2
1.2.2	Ultrafiltration (UF)	2
1.2.3	Nanofiltration (NF)	3
1.2.4	Reverse Osmosis (RO)	3
1.2.5	Electrodialysis (ED)	4
1.2.6	Pervaporation (PV)	5
1.3	Molecular Weight Cutoff (MWCO)	8
1.4	Concentration Polarization	9
1.5	Membrane Fouling	10
1.6	Diafiltration	11
1.7	Historical Perspective	11
1.8	Concluding Remarks and Future Challenges	12
	References	14
2	Introduction to Membrane Contactor Technology	17
	<i>Mohammad Younas and Mashallah Rezakazemi</i>	
2.1	Membrane Contactor Separation Processes	17
2.1.1	Membrane Contactors	17
2.1.2	History and Background of Membrane Contactors	20
2.1.3	Types of Membrane Contactor Systems	21
2.1.3.1	Solid Porous Membrane as Medium of Contact in Membrane Contactors	21
2.1.3.2	Liquid Membrane Contactors	30
2.1.4	Membrane Contactor Integrated Systems	34
2.1.5	Potential of Membrane Contactor in Concentration, Temperature Polarization, Wetting, and Fouling of Membranes	35

2.2	Conclusion and Future Trends of Membrane Contactors	37
	References	38

3 Transport Theory in Membrane Contactor: Operational Principle 45

Mohammad Younas, Waheed Ur Rehman, and Mashallah Rezakazemi

3.1	Diffusional Mass and Heat Transfer Modeling	45
3.2	Membrane Characterization Models	46
3.2.1	Contact Angle and Liquid Entry Pressure	46
3.2.2	Liquid Entry Pressure (LEP)	49
3.2.3	Permporometry (Pore Size Distribution)	52
3.2.4	Electron Microscopy	52
3.3	Transport Models in Liquid–Liquid Contactor	52
3.3.1	Resistance in Series Model	55
3.3.1.1	Model Approach	56
3.3.1.2	Two Film Theory	56
3.3.1.3	Phase Equilibrium in Liquid–Liquid System	58
3.3.1.4	Overall Mass Transfer Coefficient	59
3.4	Transport Model in Gas–Liquid Systems	60
3.4.1	Phase Equilibrium for Gas–Liquid System	61
3.4.2	Resistance in Series Model	61
3.5	Reactive Diffusion in Liquid-Side Boundary Layer	62
3.6	Mass Transfer Resistance Analysis	63
3.7	Correlations for Mass Transfer Coefficients	65
3.7.1	Correlation for Flow in Shell Side	66
3.7.2	Correlation for Flow in Tube Side	66
3.7.3	Correlation for Mass Transfer in Membrane Pores	68
3.8	Correlations for Heat Transfer Coefficients	69
3.9	Interfacial Transfer Area	70
3.10	Axial Pressure Drop in Membrane Contactor Module	71
3.11	Dynamic Modeling	71
3.12	Transfer Units and Module Design Length	72
3.13	Numerical Modeling of Mass Transport in Membrane Contactor Modules	73
3.13.1	Mass Transfer in Shell Side	75
3.13.2	Mass Transfer Inside Fibers	77
3.13.3	Mass Transfer in Membrane Pores	78
3.13.4	Numerical Modeling Term in the Case of Membrane Wetting	79
3.14	Numerical Modeling of Heat Transport in Membrane Contactor Modules	81
3.14.1	Governing Equation in Cold and Hot Channels	82
3.14.2	Governing Equation Inside Membrane	82
3.15	Model Solution Algorithm	83
3.16	Conclusions and Perspectives	84

- 3.A Membrane Transport Theory: Operational Principle 84
- 3.A.1 Steady-State Resistance-in-Series Model Across Liquid–Liquid Contactor 84
 - 3.A.1.1 Hydrophobic Membrane Based on Aqueous-Phase Side (Species Transfers from Aqueous Phase to Organic Phase) 84
 - 3.A.1.2 Hydrophobic Membrane Based on Organic-Phase Side (Species Transfers from Aqueous Phase to Organic Phase) 85
 - 3.A.1.3 Hydrophobic Membrane Based on Organic-Phase Side (Species Transfers from Organic Phase to Aqueous Phase) 85
 - 3.A.1.4 Hydrophobic Membrane Based on Aqueous-Phase Side (Species Transfers from Organic Phase to Aqueous Phase) 85
 - 3.A.1.5 Hydrophilic Membrane Based on Aqueous-Phase Side (Species Transfers from Aqueous Phase to Organic Phase) 86
 - 3.A.1.6 Hydrophilic Membrane Based on Organic-Phase Side (Species Transfers from Aqueous Phase to Organic Phase) 86
 - 3.A.1.7 Hydrophilic Membrane Based on Organic-Phase Side (Species Transfers from Organic Phase to Aqueous Phase) 86
 - 3.A.1.8 Hydrophilic Membrane Based on Aqueous-Phase Side (Species Transfers from Organic Phase to Aqueous Phase) 87
 - 3.A.1.9 Composite Membrane Based on Aqueous-Phase Side (Species Transfers from Aqueous Phase to Organic Phase) 87
 - 3.A.1.10 Composite Membrane Based on Organic-Phase Side (Species Transfers from Aqueous Phase to Organic Phase) 87
 - 3.A.1.11 Composite Membrane Based on Organic-Phase Side (Species Transfers from Organic Phase to Aqueous Phase) 87
 - 3.A.1.12 Composite Membrane Based on Aqueous-Phase Side (Species Transfers from Organic Phase to Aqueous Phase) 88
- 3.A.2 Steady-State Resistance-in-Series Model Across Gas–Liquid Contactor 88
 - 3.A.2.1 Hydrophobic Membrane Based on Gas-Phase Side (Species Transfers from Gas Phase to Liquid Phase) 88
 - 3.A.2.2 Hydrophobic Membrane Based on Liquid-Phase Side (Species Transfers from Gas Phase to Liquid Phase) 88
 - 3.A.2.3 Hydrophobic Membrane Based on Liquid-Phase Side (Species Transfers from Liquid Phase to Gas Phase) 89
 - 3.A.2.4 Hydrophobic Membrane Based on Gas-Phase Side (Species Transfers from Liquid Phase to Gas Phase) 89
 - 3.A.2.5 Hydrophilic Membrane Based on Gas-Phase Side (Species Transfers from Gas Phase to Liquid Phase) 89
 - 3.A.2.6 Hydrophilic Membrane Based on Liquid-Phase Side (Species Transfers from Gas Phase to Liquid Phase) 90
 - 3.A.2.7 Hydrophilic Membrane Based on Liquid-Phase Side (Species Transfers from Liquid Phase to Gas Phase) 90
 - 3.A.2.8 Hydrophilic Membrane Based on Gas-Phase Side (Species Transfers from Liquid Phase to Gas Phase) 91

- 3.A.2.9 Composite Membrane Based on Gas-Phase Side (Species Transfers from Gas Phase to Liquid Phase) 91
- 3.A.2.10 Composite Membrane Based on Liquid-Phase Side (Species Transfers from Gas Phase to Liquid Phase) 91
- 3.A.2.11 Composite Membrane Based on Liquid-Phase Side (Species Transfers from Gas Phase to Liquid Phase) 91
- 3.A.2.12 Composite Membrane Based on Gas-Phase Side (Species Transfers from Liquid Phase to Gas Phase) 92
- 3.A.3 Dynamic Modeling Across the Storage Tank 92
- References 93

4 Module Design and Membrane Materials 99

Nabilah Fazil, Sidra Saqib, Ahmad Mukhtar, Mohammad Younas, and Mashallah Rezakazemi

- 4.1 Introduction 99
- 4.2 Membrane Module Design Configuration 100
 - 4.2.1 Plate-and-Frame Modules 100
 - 4.2.2 Spiral Wound Modules 103
 - 4.2.3 Tubular Modules 104
 - 4.2.4 Hollow Fiber Modules 106
- 4.3 Membrane Contactor Module Housing 111
- 4.4 Membrane Module Flow Configuration 116
- 4.5 Membrane Materials 116
 - 4.5.1 Polymer Materials 118
 - 4.5.2 Inorganic Fillers 125
- 4.6 Membrane and Membrane Module for Membrane Distillation (MD) and Osmotic Membrane Distillation (OMD) 126
- 4.7 Solvents Used in Membrane Synthesis 128
- 4.8 Membrane Synthesis Techniques 128
- 4.9 Conclusions 130
- 4.10 Future Perspective 131
- References 131

5 Mode of Operation in Membrane Contactors 143

Waheed Ur Rehman, Zarrar Salahuddin, Sarah Farrukh, Muhammad Younas, and Mashallah Rezakazemi

- 5.1 Membrane Distillation (MD) 143
 - 5.1.1 Basic Principles of MD Process 143
 - 5.1.2 MD Configurations 144
 - 5.1.3 Overall Driving Force 145
 - 5.1.4 Overall Mass Transfer Coefficient, K 147
 - 5.1.4.1 Feed-Side Mass Transfer 148
 - 5.1.4.2 Membrane Mass Transfer 150
 - 5.1.4.3 Strip-Side Mass Transfer 151
 - 5.1.5 Vapor Pressure Polarization Coefficient, θ_v 152

5.1.5.1	DCMD	152
5.1.5.2	Feed–Side and Strip–Side Heat Transfer	153
5.1.5.3	Membrane Heat Transfer	153
5.1.6	AGMD	154
5.1.6.1	SGMD	156
5.1.7	VMD	157
5.1.8	Membranes for MD Process	157
5.1.9	Pros and Cons of MD Process	158
5.1.10	Future Prospects of MD Process	161
5.2	Osmotic Membrane Distillation (OMD)	161
5.2.1	Basic Principles of OMD Process	161
5.2.2	Overall Mass Transfer	163
5.2.2.1	Mass Transfer Across Feed Boundary Layer	163
5.2.2.2	Mass Transfer Across Stripper Boundary Layer	163
5.2.2.3	Mass Transfer Across Membrane	164
5.2.2.4	Mass Transfer Coefficient for Feed and Stripper Side	164
5.2.2.5	Mass Transfer Coefficient Across Membrane	164
5.2.3	Stripping Solutions for OMD	165
5.2.4	Membranes for OMD Process	166
5.2.5	Pros and Cons of OMD Process	166
5.3	Forward Osmosis	167
5.3.1	Basic Principles of FO Process	167
5.3.2	Calculation of the Osmotic Pressures	167
5.3.3	Reverse Solute Flux in FO	170
5.3.4	Membranes for FO Process	170
5.3.5	Draw Solutes for FO Process	171
5.3.6	Pros and Cons of FO Process	172
5.4	Pressure-Retarded Osmosis	172
5.4.1	Basic Principles of PRO Process	172
5.4.2	Membranes for PRO Process	175
5.4.3	Pros and Cons of PRO Process	176
5.5	Conclusions	176
	References	176

6 Applications of Membrane Contactor Technology in Wastewater Treatment 185

Ayesha Rehman, Xianhui Li, Sarah Farrukh, Mohammad Younas, and Mashallah Rezakazemi

6.1	Introduction	185
6.2	Common Toxic Substances in Wastewater	187
6.2.1	Phenols	187
6.2.2	Heavy Metals	188
6.2.3	Ammonia	188
6.2.4	Hydrogen Sulfide	188
6.2.5	Carbon Dioxide	188

6.2.6	Petroleum Hydrocarbons	188
6.2.7	Polycyclic Aromatic Hydrocarbons	189
6.2.8	Nitrobenzene	189
6.3	Environmental Risks of Wastewater	189
6.4	Membrane Technology for Wastewater Treatment	190
6.5	Membrane Contactor Technology for Removal of Organic Contaminants from Wastewater	193
6.6	Removal of Inorganic Contaminants from Wastewater	200
6.7	Polymer-Based Adsorption Membranes	202
6.8	Ion-Exchange Nanoporous Membrane	204
6.9	Micellar-Enhanced Ultrafiltration Membrane	204
6.10	Membrane Materials for Water Treatment	205
6.11	Membrane Materials for Microfiltration (MF) and Ultrafiltration (UF)	206
6.12	Membrane Materials for Nanofiltration (NF)	206
6.13	Membrane Materials for Reverse Osmosis (RO)	207
6.14	Membrane Materials for Forward Osmosis (FO)	207
6.15	Challenges in Membrane Materials to Prevent Fouling	208
6.16	Conclusions and Perspectives	209
	References	210
7	Applications of Membrane Contactors in Food Industry	219
	<i>Waheed Ur Rehman, Bazla Sarwar, Sidra Saqib, Ahmad Mukhtar, Mohammad Younas, and Mashallah Rezakazemi</i>	
7.1	Introduction	219
7.2	Membrane Distillation (MD) Applications in Food Industry	219
7.2.1	MD in the Concentration of Apple Juice	221
7.2.2	MD in the Concentration of Orange Juice	222
7.2.3	MD in the Concentration of Milk	222
7.2.4	MD in the Treatment of Saline Dairy Waste Water	223
7.2.5	MD in the Concentration of Muscadine Grape Pomace	224
7.2.6	MD in the Recovery of Phenols from Olive Mill Wastewater	225
7.2.7	MD in the Concentration of Sucrose Solution	225
7.2.8	Effect of Operating Parameters on MD Flux	225
7.3	Application of Osmotic Membrane Distillation (OMD) in Food Industry	227
7.3.1	Effect of Operating Conditions on OMD Water Flux	228
7.3.2	OMD in the Concentration of Apple Juice	231
7.3.3	OMD in the Concentration of Grape Juice	232
7.3.4	OMD in the Concentration of Pomegranate Juice	233
7.3.5	OMD in the Concentration of Orange Juice	235
7.3.6	OMD in the Concentration of Cranberry and Noni Juices	235
7.3.7	OMD in the Concentration of Kiwi and Pineapple Juices	236
7.3.8	OMD in the Concentration of Tea Extracts	236
7.3.9	Dealcoholization of Beer and Wine	237

7.4	Coupled Operation of Osmotic Distillation and Membrane Distillation	238
7.5	Conclusions	239
7.6	Future Perspectives	239
	References	240
8	Applications of Membrane Contactor Technology for Pre-combustion Carbon Dioxide (CO₂) Capture	247
	<i>Zarrar Salahuddin, Sarah Farrukh, Mohammad Younas, and Mashallah Rezakazemi</i>	
8.1	Introduction	247
8.2	Why Pre-combustion Carbon Capture?	250
8.3	Membranes for Pre-combustion Carbon Capture	250
8.3.1	Hydrogen (H ₂)-Selective Membranes	250
8.3.2	CO ₂ -Selective Membranes	255
8.4	Advantages and Limitations of Pre-combustion Carbon Capture Using Membrane Technology	262
8.5	Applications of Pre-combustion Carbon Capture	263
8.6	Current Trends and Future Prospects	263
8.7	Concluding and Future Directions	269
	References	269
9	Application of Membrane Contactor Technology for Post-combustion Carbon Dioxide (CO₂) Capture	281
	<i>Muhammad B. Wazir, Muhammad Daud, Mohammad Younas, and Mashallah Rezakazemi</i>	
9.1	Introduction	281
9.2	Membranes for Post-combustion CO ₂ Capture	282
9.2.1	Membrane Types	282
9.2.2	Membrane Modules	285
9.3	Experimental Membrane Materials for Post-combustion CO ₂ Sequestration	285
9.4	Commercial Membranes for Post-combustion CO ₂ Separation	288
9.5	Cost of Post-combustion CO ₂ Capture in Membrane Contactors	289
9.6	Absorbents for Post-combustion CO ₂ Separation	291
9.6.1	Amine-Based Absorbents	291
9.6.2	Ammonia	293
9.6.3	Salt Solutions	294
9.6.4	Ionic Liquids	295
9.7	Conclusion and Future Perspective	295
	References	296
10	Market Prospects of Membrane Contactors	305
	<i>Zahra Pezeshki, Mohammad Younas, and Mashallah Rezakazemi</i>	
10.1	Membrane Contactor Market Dynamics	305

10.2	Market Overview	306
10.3	Membrane Contactor Market by Application	313
10.3.1	Water and Wastewater Treatment Market	313
10.3.2	Food Processing Market	315
10.3.3	Gas Separation Market	318
10.3.4	Carbon Capture Market	321
10.4	Membrane Contactor Market, by Membrane	321
10.5	Membrane Contactor Market, by Region	325
10.6	Recent Developments of Membrane Contactor Companies	328
10.6.1	3M Company	328
10.6.2	Cobetter Filtration Equipment Pvt. Ltd.	329
10.6.3	EUROWATER	329
10.6.4	JU.CLA.S Srl	329
10.6.5	Veolia Environnement SA	329
10.6.6	PTI Pacific Pty. Ltd.	330
10.6.7	Kværner ASA	330
10.6.8	Lenntech B.V.	330
10.6.9	Pure Water Group	330
10.6.10	TNO Company	330
10.6.11	Euwa H. H. Eumann GmbH (Euwa)	330
10.6.12	Hydro-Elektrik GmbH	331
10.6.13	KH TEC GmbH	331
10.6.14	Romfil GmbH	331
10.7	Future Directions	331
10.8	Conclusion	332
	References	332
11	Conclusions and Perspective	337
	<i>Mohammad Younas and Mashallah Rezakazemi</i>	
11.1	Future Directions	340
	Index	342
