

Contents

Preface *xiii*

About the Author *xiv*

1 Introduction *1*

- 1.1 General Introduction *1*
- 1.2 The History of Electrochromic Materials *3*
- 1.3 The Key Parameters of Electrochromism *5*
 - 1.3.1 Electrochromic Contrast *5*
 - 1.3.2 Switching Time *8*
 - 1.3.3 Coloration Efficiency *9*
 - 1.3.4 Optical Memory *11*
 - 1.3.5 Stability *12*
- 1.4 Conclusion *14*
- References *14*

2 Advances in Polymer Electrolytes for Electrochromic Applications *17*

- 2.1 Introduction *17*
- 2.2 Requirements of Polymer Electrolytes in Electrochromic Applications *18*
- 2.3 Types of Polymer Electrolytes *20*
 - 2.3.1 Gel Polymer Electrolytes (GPEs) *20*
 - 2.3.1.1 PEO-/PEG-Based Electrolytes *21*
 - 2.3.1.2 PMMA-Based Polymer Electrolytes *21*
 - 2.3.1.3 PVDF-Based Polymer Electrolytes *22*
 - 2.3.2 Self-Healing Polymer Electrolytes *24*
 - 2.3.3 Cross-Linking Polymer Electrolytes (CPEs) *26*
 - 2.3.4 Ceramic Polymer Electrolytes *27*
 - 2.3.5 Ionic Liquid Polymer Electrolytes *30*
 - 2.3.6 Gelatin-Based Polymer Electrolytes *32*
- 2.4 Conclusion and Future Outlook *33*
- References *40*

3	Electrochromic Small Molecules	49
3.1	Background of Small Molecule Electrochromic	49
3.2	Technology Development of Small Molecule Electrochromic Materials	50
3.3	Violene–Cyanine Hybrids (AIE PL OEC)	50
3.4	Terephthalate Derivatives (Multicolor OEC)	56
3.4.1	Conclusion	63
3.5	Isophthalate Derivatives	64
3.5.1	Conclusion	79
3.6	Methyl Ketone Derivatives	79
3.6.1	Conclusion	84
3.7	Diphenylacetylenes	84
3.8	Fluoran Dye Derivatives	85
3.9	PH-Responsive Molecule Derivatives	92
3.10	TPA Dye Derivatives	95
3.11	Hydrocarbon Derivatives-NIR-OEC	99
3.12	Conclusions and Perspective	101
	References	101
4	Viologen OEC	105
4.1	The Introduction of OEC and Viologen	105
4.1.1	General Introduction	105
4.1.2	Research History of Viologen	105
4.1.2.1	First Stage (1930s–1970s)	107
4.1.2.2	Second Stage (1970s–2000s)	107
4.1.2.3	Third Stage (2000s–2010s)	107
4.1.2.4	Fourth Stage (2010s–Present)	108
4.1.3	Electrochromism and Electrochemistry of Viologens and Their Device	109
4.2	Different Structures of Viologen-Based Electrochromic Materials	110
4.2.1	Synthesis of Viologens	110
4.2.1.1	Direct Substitution Reaction	110
4.2.1.2	Zincke Reaction	110
4.2.1.3	Methods for Synthesizing Bipyridine	110
4.2.2	The 1,1'-Substituted Viologen	111
4.2.2.1	Simple Alkyl	111
4.2.2.2	Acid Group	111
4.2.2.3	Ester and Nitrogen Heterocycle	112
4.2.2.4	Asymmetric Substitution	113
4.2.3	Conjugate Ring System Expansion	113
4.2.3.1	Thiazolothiazole (TTz) Unit	113
4.2.3.2	Perylenediimide (PDI) Unit	115
4.2.3.3	PBEDOTPh	115
4.2.3.4	Heteroatoms Bridged	115
4.2.3.5	Bithiophene Bridged	118

4.2.4	Viologen-Based Polymer	119
4.2.4.1	Viologen in the Side Chain	120
4.2.4.2	Viologen in the Main Chain	122
4.3	Viologen Electrochromic Device	124
4.3.1	Device Structure	124
4.3.1.1	Five-Layer Classic Structure	124
4.3.1.2	Simple Sandwich Structure	125
4.3.1.3	Cathodic Anode Separation Structure	125
4.3.1.4	Reflective Device Structure	126
4.3.2	Electrolyte	126
4.3.3	Redox Mediator	126
4.3.4	Conductive Medium	128
4.3.5	Problems with Viologen Compound	128
4.3.5.1	Dimerization	128
4.3.5.2	Aggregation and Solubility	131
4.3.5.3	Response Time	131
4.3.5.4	Driving Voltage	131
4.3.5.5	Conclusion	131
4.3.6	Examples of Viologen-Based ECD	132
4.4	Companies Operating in the Field of Viologen Electrochromism	132
4.4.1	Gentex	132
4.4.2	Essilor	134
4.4.3	Haoruo	134
4.5	Conclusion	134
	References	135
5	Metallohexacyanates	143
5.1	Background	143
5.2	Technology Development of PB	144
5.3	Crystal Structure	144
5.4	Electrochromic Mechanism	145
5.5	Synthesis	147
5.6	Electrochromic Devices (ECDs)	150
5.7	Nanocomposites	154
5.8	PB Analogs	160
5.9	Multifunctional Applications	170
	References	175
6	Electrochromic Conjugated Polymers (ECPs)	183
6.1	Introduction	183
6.1.1	Common Categories and Operation Mechanism	183
6.1.2	Synthetic Methods	186
6.2	Thiophene-Based Conjugated Electrochromic Polymers	190
6.2.1	Introduction	190
6.2.2	Color-Tuning Strategies for Thiophene-Based Polymers	191

- 6.2.2.1 Steric Effects 192
- 6.2.2.2 Substituent and Electronic Effects 193
- 6.2.3 Typical Colored Polymers 195
 - 6.2.3.1 Yellow and Orange 196
 - 6.2.3.2 Red 198
 - 6.2.3.3 Magenta and Purple 199
 - 6.2.3.4 Black 202
 - 6.2.3.5 Multicolored 203
 - 6.2.3.6 Anodically Coloring Polymers 205
- 6.2.4 Water- or “Green Solvents”-Soluble ECPs 208
- 6.3 Polypyrroles-Based Conjugated Electrochromic Polymers 216
 - 6.3.1 Introduction 216
 - 6.3.2 Electrochromic Properties of Polypyrroles (PPy) 218
 - 6.3.3 Tuning of Electrochromic Properties of Polypyrrole (PPy) 218
 - 6.3.3.1 Structural Modification 218
 - 6.3.3.2 3- and 3,4-Substituted Polypyrroles 235
 - 6.3.3.3 Donor–Acceptor Approach 236
 - 6.3.3.4 Terarylene Systems 237
 - 6.4 Polycarbazole-Based Conjugated Electrochromic Polymers 237
 - 6.4.1 Introduction 237
 - 6.4.2 Electrochromic Properties of Polycarbazoles (PCARB) 238
 - 6.4.3 Electrochromic Properties of Polycarbazoles Derivatives 238
 - 6.4.3.1 Linear Polycarbazole Derivatives 241
 - 6.4.3.2 Cross-Linked Polycarbazoles Derivatives 249
 - References 260
- 7 TA-Based Electrochromic Polyimides and Polyamides 269**
 - 7.1 Introduction 269
 - 7.1.1 Aromatic Polyimides and Polyamides 269
 - 7.1.2 Triarylamine-Based Aromatic Polymers 270
 - 7.1.3 Electrochemical and Electrochromic Behaviors of MV Triarylamine Systems 272
 - 7.2 Development of TA-Based Electrochromic Polyimides and Polyamides 272
 - 7.2.1 Side Group Engineering 276
 - 7.2.1.1 Introduction of Protecting Groups 276
 - 7.2.1.2 Introduction of Electroactive Groups to Achieve Color Tuning of EC Material 277
 - 7.2.1.3 Introduction of Side Groups to Achieve Electrofluorochromic Materials 278
 - 7.2.1.4 Introduction of Other Functional Side Groups to Achieve Multiple Functions EC Material 281
 - 7.2.2 Backbone Modulation 283
 - 7.2.2.1 Extending the Polymer Backbone by Introducing More Electroactive Groups 283

7.2.2.2	Introduction of Amide Linkage into Polyimide Backbone	285
7.2.2.3	Introduction of Ether Linkage into PIs/PAs Backbone	285
7.2.2.4	Introduction of Alicyclic Structures into PIs/PAs Backbone	288
7.3	Conclusions	290
	References	290

8 Metallo-Supramolecular Polymers 295

8.1	Introduction	295
8.2	Single Metallic System	296
8.2.1	Fe(II)- and Ru(II)-Based Metallo-Supramolecular Polymers	296
8.2.2	Co ^{II} -Based Metallo-Supramolecular Polymers	299
8.2.3	Zn ^{II} -Based Metallo-Supramolecular Polymers	301
8.2.4	Cu-Based Metallo-Supramolecular Polymers	305
8.2.5	Eu ^{III} -Based Metallo-Supramolecular Polymers	308
8.3	Hetero-Metallic System	311
8.4	The Fabrication Method of Metallopolymer Film	314
8.4.1	Layer-by-Layer Self-Assembly and Dip-Coating Methods	314
8.4.2	Electropolymerized Conducting Metallopolymers	315
8.5	Conclusion	323
	References	323

9 Metal-Organic Framework (MOF)- and Covalent Organic Framework (COF)-Based Electrochromism (EC) 327

9.1	Introduction	327
9.2	Current Studies in EC MOFs	327
9.2.1	The Organic Linkers in EC MOFs	328
9.2.1.1	NDI-Based Organic Linkers	328
9.2.1.2	Other Organic Linkers	332
9.2.2	The Transport of Electrolyte Ions in EC MOFs	335
9.2.3	Special EC MOFs	338
9.2.3.1	Photochromic and Electrochromic Multi-Responsive MOF	338
9.2.3.2	MOF-Based Double-Sided EC Device and Other Color-Switching Mechanisms	339
9.2.3.3	EC Base on “Guest@MOF” Composite System	340
9.3	Current Studies in EC COFs	341
9.4	Conclusion and Prospect	348
	References	348

10 Nanostructure-Based Electrochromism 353

10.1	Introduction	353
10.2	Current Studies of Nanostructure in Electrochromism	354
10.2.1	Non-Electrochromic Active Materials as a Template for ECs	354
10.2.1.1	Photonic Crystals as Templates for ECs	354
10.2.1.2	Plasmonic Structures as Templates for ECs	359

10.2.2	Nanostructured Electrochromic Materials in ECs	365
10.3	Conclusion and Prospect	369
	References	369
11	Organic Electroluminochromic Materials	373
11.1	Introduction	373
11.2	Conventional Mechanisms of Electroluminochromism	375
11.2.1	Intrinsic Mechanism	375
11.2.2	Electron Transfer (ET) Mechanism	376
11.2.3	Energy Transfer (EnT) Mechanism	376
11.3	Electroluminochromic Performance Parameters	376
11.3.1	Emission Contrast	376
11.3.2	Switching Time	377
11.3.3	Long-Term Stability/Cycle Life	377
11.4	Classical Materials	378
11.4.1	Small Molecules	378
11.4.1.1	Small Molecular Dyads	378
11.4.1.2	Redox-Active Moiety and Luminophores System	380
11.4.1.3	Electroactive Luminophores	382
11.4.2	Transition Metal Complexes	386
11.4.3	Polymers	387
11.4.3.1	Non-Conjugated Polymers	387
11.4.3.2	Conjugated Polymers	396
11.4.4	Nanocomposite Films	407
11.5	Future Perspectives and Conclusion	408
	References	408
12	Organic Photoelectrochromic Devices	415
12.1	Introduction	415
12.2	Structure Design of PECDs	417
12.2.1	Power Supply for PECD	417
12.2.1.1	DSSC-Based PECD	418
12.2.1.2	PSC-Based PECD	423
12.2.1.3	OPV-Based PECD	423
12.2.2	Electrochromic Materials in PECD	425
12.2.2.1	Small Molecule	425
12.2.2.2	Conducting Polymers	427
12.2.2.3	Near-Infrared (NIR) Electrochromic Materials	433
12.2.3	Electrolytes in PECD	435
12.2.4	Substrates in PECD	435
12.3	Future Perspectives and Conclusion	436
	References	436
13	Application of OEC Devices	445
13.1	Smart Window	445

13.1.1	The Structure and Working Mechanism of Smart Windows	445
13.1.2	The Materials for Electrochromic Windows	446
13.1.3	Prospects	450
13.2	Dimmable Rearview Mirror	450
13.3	Sensors	451
13.3.1	Application of Electrochromic Sensors on Food Preservation	451
13.3.2	Application in Bio-Sensing	454
13.4	The Application of Electrochromic Device in Display	460
13.5	Other Applications of OEC	462
	References	469
14	Commercialized OEC Materials and Related Analysis of Company Patents	471
14.1	General Introduction	471
14.2	Gentex Corporation	471
14.3	Ricoh Company, Ltd.	475
14.4	Canon Inc.	476
14.5	BOE Technology Group Co., Ltd. and OPPO Guangdong Mobile Communications Co., Ltd.	477
14.6	Other Important Enterprises	481
14.6.1	Ninbo Ninuo Electronic Technology Co., Ltd.	481
14.6.2	Ambilight Inc.	483
14.6.3	Furcifer Inc.	483
14.6.4	Changzhou Spectrum New Material Co. Ltd.	484
14.7	Conclusion	485
	References	485
15	Main Challenges for the Commercialization of OEC	491
15.1	Introduction	491
15.2	The Long-Term Stability of OEC Materials	491
15.3	The Mechanical Stability of OEC Devices (Encapsulation Technology)	495
15.4	Large-Area Process Technology: Spray Coating and Roll-to-Roll Processes	498
15.4.1	Inkjet Printing	498
15.4.2	Spray Coating	500
15.4.3	Slot-Die Coating	500
15.4.4	Screen Printing	501
15.5	Conclusions and Perspective	501
	References	502
	Index	505
