	Preface	<i>xiii</i>
	List of Abbreviations	<i>xv</i>
	About the Author	<i>xix</i>
1	Introduction	<i>1</i>
	References	<i>3</i>
2	Silicon Electrochemistry – Toward Low-Carbon Economy	<i>5</i>
2.1	Silicon for Energy Storage – Electrochemical Batteries	<i>6</i>
2.2	Silicon for Energy Conversion – Photovoltaic Devices	<i>9</i>
2.2.1	Solar to Electricity	<i>9</i>
2.2.2	Solar-to-Chemical Conversion	<i>15</i>
	References	<i>17</i>
3	Brief Historical Overview of Silicon Production.	
	Metallurgical-Grade Silicon	<i>21</i>
	References	<i>26</i>
4	Physical and Chemical Properties of Silicon	<i>27</i>
	References	<i>30</i>
5	Silicon Refining: From Metallurgical-Grade to Electronic-Grade	<i>33</i>
5.1	Purification Based on Direct Si Chlorination	<i>34</i>
5.2	The Siemens Process	<i>35</i>
5.3	The Union Carbide Process	<i>37</i>
5.4	The Ethyl Process	<i>38</i>
5.5	Electrorefining in Molten Salts	<i>40</i>
5.6	Zone Refining, Acid Leaching	<i>43</i>
	References	<i>45</i>

- 6 Silicon Electrowinning and Electrodeposition of Thin Layers 49**
- 6.1 Electrodeposition in Molten Fluoride, Chloride, and Oxide Electrolytes 49
 - 6.2 Substrate Materials for Silicon Electrodeposition 55
 - 6.3 Electrodeposition of Photoactive Silicon and p–n Junction 56
 - 6.4 Electrodeposition of Silicon from Ionic Liquids and Organic Solvents 60
 - 6.5 Purity Concerns and Solutions 66
References 69
- 7 Photoelectrochemistry and Nanogravimetry of Si and Si-Oxide Electrodes 77**
- 7.1 Topicality of Si Photoelectrochemical Research 77
 - 7.2 Basic Parameters: Photopotential, Photocurrent, and Photocapacitance 80
 - 7.3 Photoelectrochemical Features of the Si-Oxide Electrodes 85
 - 7.3.1 Si–SiO₂ Electrode 86
 - 7.3.2 Si–HfO₂ Electrode 93
 - 7.3.3 Si–Al₂O₃ Electrode 105
 - 7.4 Quartz Crystal Nanogravimetry 106
References 112
- 8 Electro-Deoxidation of Solid Compounds in Molten Salts 121**
References 127
- 9 Voltammetry and Basic Reactions of Silicon Electrode in Molten CaCl₂ 129**
References 140
- 10 Si–SiO₂ Electrode in Molten CaCl₂ 145**
References 147
- 11 Formation of Silicon Oxide Layer 149**
References 155
- 12 *In Situ* Studies of SiO₂ → Si Conversion – Synchrotron X-ray Diffraction 159**
References 162
- 13 Molten Oxide Electrochemistry at Ultra-High Temperatures 165**
References 172
- 14 Silicon Surface Structuring 175**
- 14.1 Electrochemical Structuring, Porous Silicon 175
 - 14.2 Chemical–Physical Structuring 178

14.2.1	Chemical Etching	178
14.2.2	Laser Engineering	180
14.2.3	Reactive Ion Etching	181
14.2.4	Plasma Immersion Ion Implantation Etching	182
14.2.5	Stain Etching	182
14.2.6	Metal-Assisted Chemical Etching	182
14.2.7	Vapor–Liquid–Solid Method	186
14.2.8	Nanostructuring Based on Porous Alumina Template	186
14.3	Black Silicon	190
	References	195
15	Electrochemical Si Surface Structuring and Formation of Black Silicon in High-Temperature Molten Salts	203
15.1	Anodic and Cathodic Processing in Molten CaCl_2	203
15.2	Microcolumnar and Amorphous Structures	205
15.3	Electrodeoxidation of Thin SiO_2 Layers	207
15.4	Globular Structures	208
15.5	Black Silicon from Molten Salts	212
15.6	Electrochemical Synthesis of Nanowires: Implications for Li-Ion Batteries	216
	References	221
16	Silicon Compositions – Perspectives for Semiconductor Production	225
16.1	Silicon Carbide	225
16.2	Silicides	231
	References	233
17	Silicon Photo-Electrodes for Water Splitting and Their Protection	237
17.1	Relevance, Basic Principles, and Semiconductor Materials for Photo-Electrodes	237
17.2	Protection of Silicon Photoelectrodes in Solar-Fuel Generators	243
17.2.1	Protection of Si Photoanodes	246
17.2.2	Protection of Si Photoanodes for Halide Reduction	247
17.2.3	Protection of Si Photocathodes	249
	References	251
18	Conclusions, Outlook, and Challenges	257
	Index	263
