Preface ix

1 Introduction 1

Yan Xia

- 1.1 Perspective 8
- References 10

**2 Conjugated, Aromatic Ladder Polymers: From Precision
Synthesis to Single Chain Spectroscopy and Strong
Light-Matter Coupling** 13

John M. Lupton and Ullrich Scherf

- 2.1 Introduction 13
- 2.2 Methylene-Bridged Phenylene Ladder Polymers – Ladder-Type
Poly(*para*-Phenylene)s – and Related Ladder Polymers 15
- 2.3 Vinylene-Bridged Phenylene Ladder Polymers (Polypentaphene Ladder
Polymers) 19
- 2.4 Conjugated Hydrocarbon Ladder Polymers with a Polyacene
Skeleton 21
- 2.5 Ethylene-Bridged Phenylene Ladder Polymers 21
- 2.6 Optoelectronic Applications of Aromatic Ladder Polymers 24
 - 2.6.1 High-Resolution Spectroscopy of LPPP 25
 - 2.6.2 LPPP as a Single-Photon Source 27
- 2.7 Interaction of Light and Matter in the Strong-Coupling Regime 33
- 2.8 A Primer on Exciton Polaritons in Microcavities 35
- 2.9 Exciton-Polariton Condensation in Planar Microcavities 36
- 2.10 Example of an All-Optical Logic Based on Polariton Condensates 39
- 2.11 Controlled Spatial Confinement of Exciton Polaritons: A Solid-State
Platform for Room-Temperature Quantum Simulators 43
- 2.12 Summary and Outlook 48
 - Acknowledgment 50
 - References 50

- 3 Graphene Nanoribbons as Ladder Polymers – Synthetic Challenges and Components of Future Electronics 59**
Yanwei Gu, Zijie Qiu, and Klaus Müllen
- 3.1 Introduction 59
- 3.2 Solution-Based Synthesis 62
- 3.3 On-Surface Synthesis of GNRs 69
- 3.4 Nonplanarity and Chirality 77
- 3.5 Spin Bearing GNRs and Magnetic Properties 79
- 3.6 Device Integration 83
- 3.7 Conclusion and Outlook 88
- Acknowledgment 89
- References 89
- 4 Processing of Conjugated Ladder Polymers 97**
Mingwan Leng and Lei Fang
- 4.1 Introduction 97
- 4.2 Solution-Processing from Acidic Media 99
- 4.2.1 Protic Acid 99
- 4.2.2 Lewis Acid 100
- 4.3 Structural Design for Solution Processability 101
- 4.3.1 End Group Modification 101
- 4.3.2 Side-Chain Modification 102
- 4.3.3 Nonplanar Backbone 105
- 4.4 Processing from Solution-Dispersed Nanoparticles 108
- 4.5 *In Situ* Reaction 110
- 4.6 Conclusion and Outlook 114
- References 115
- 5 Multiporphyrin Arrays: From Biomimetics to Functional Materials 121**
Zhong-Xin Xue and Wei-Shi Li
- 5.1 Introduction 121
- 5.2 Structure Variations and Synthetic Strategies 123
- 5.2.1 Multiporphyrin Arrays Having Linear and Ladder Shapes 123
- 5.2.2 Multiporphyrin Arrays Having Ring and Tube Shapes 128
- 5.2.3 Multiporphyrin Arrays Having Spherical Shapes 134
- 5.2.4 Multiporphyrin Arrays Having Two-Dimensional Sheet-Like Shapes 137
- 5.2.5 Multiporphyrin Array-Constructed Cages 143
- 5.2.6 Multiporphyrin Array-Based Rotaxanes 147
- 5.3 Functions and Applications 148
- 5.3.1 As Models for Studying Photochemical Processes in Natural Photosynthesis 148
- 5.3.2 As Components for Host–Guest Chemistry and Supramolecular Assemblies 153

5.3.3	As Porous Materials for Chemical Adsorption and Separation	159
5.3.4	As Catalysts for Diverse Chemical Reactions	162
5.4	Conclusions	170
	References	170
6	Ladder Polymers of Intrinsic Microporosity (PIMs)	179
	<i>Mariolino Carta</i>	
6.1	Introduction	179
6.1.1	Porosity of PIMs	181
6.1.2	Thermal Stability of PIMs	182
6.2	Types of Ladder PIMs	183
6.2.1	PIM-1	183
6.2.2	PIM-1 Modification and Other Polybenzodioxane-Based Ladder PIMs	185
6.2.3	Modification of PIM-1 and Use of Different Fluorinated Monomers	189
6.2.4	Ladder Co-polymers and Other Modifications	190
6.3	Tröger's Base PIMs (TB-PIMs)	193
6.3.1	New Tröger's Base Ladder PIMs (TB-PIMs)	194
6.3.2	Tröger's Base (TB) Ladder Modifications: Quaternization and Ring Opening	198
6.4	Applications of PIMs	201
6.4.1	Gas Separation	201
6.4.2	Gas Storage	206
6.4.3	Catalysis and Electrochemistry Applications	206
6.4.4	PIMs for Pervaporation and Nanofiltration	208
6.4.5	Anion and Cation Exchange and Energy Applications	209
6.5	Conclusions	210
	References	210
7	Catalytic Arene–Norbornene Annulation (CANAL) Polymerization for the Synthesis of Rigid Ladder Polymers	219
	<i>Dylan Freas and Yan Xia</i>	
7.1	Introduction	219
7.2	Inspiration of CANAL Polymerization from the Catellani Reaction	220
7.3	CANAL Polymerization for the Synthesis of Rigid Kinked Ladder Polymers	222
7.4	Conclusion and Outlook	226
	References	229
8	Simultaneous Growth in Two Dimensions: A Key to Synthetic 2D Polymers	231
	<i>A. Dieter Schlüter</i>	
8.1	Introduction	231
8.2	Strategic Considerations and Some Results	234

8.3	On the Polymerization Mechanism	237
8.4	Summary	242
	Acknowledgments	243
	References	243
9	Ladderphanes and Related Ladder Polymers	247
	<i>Tien-Yau Luh, Meiran Xie, Liang Ding, and Chun-hsien Chen</i>	
9.1	Introduction	247
9.2	Polynorbornene-Based Symmetric Ladderphanes	248
9.2.1	General	248
9.2.2	Ferrocene Linkers	250
9.2.3	Planar Aromatic Linkers	253
9.2.4	Macrocyclic Metal Complexes	253
9.2.5	Three-Dimensional Organic Linkers	255
9.3	Symmetric Ladderphanes with All Z Double Bonds on the Polymeric Backbones	257
9.4	Polyacetylene-Based Ladderphanes	258
9.4.1	General	258
9.4.2	Synthesis of PA-Based Ladderphanes	258
9.4.3	Charged Species in Ladderphanes and Block Ladderphanes	260
9.4.4	Topochemical Methods for Symmetric Ladderphanes	260
9.5	Unsymmetric Ladderphanes by Template Synthesis	261
9.5.1	General	261
9.5.2	Polynorbornene-Based Unsymmetric Ladderphanes by Replication Protocol	262
9.6	Sequential Polymerization of a Monomer Having Two Different Polymerizable Groups	265
9.6.1	General	265
9.6.2	Polycyclobutene-Based Unsymmetric Ladderphanes	267
9.7	Chemical Reactions of Ladderphanes	272
9.7.1	Reactions with Double Bonds on Ladderphanes	272
9.7.2	Reactions at the End Groups	273
9.7.3	Arrays of Ladderphanes	274
9.7.4	Cyclic Ladderphanes	274
9.8	Physical Properties	275
9.8.1	General	275
9.8.2	Excimer Formation and Aggregation Enhanced Excimer Emission	275
9.8.3	Dielectric Properties	278
9.9	Conclusion	278
	References	279
10	Ladder Polysiloxanes	285
	<i>Ze Li</i>	
10.1	Introduction	285
10.2	Preparation of LPSs	286
10.2.1	Hydrolysis–Condensation Procedures	286
10.2.2	Supramolecular Architecture-Directed Confined Polymerization	289

- 10.3 Applications of LPSQs 291
- 10.3.1 Applications for Manufacturing Electrical Devices 291
- 10.3.2 Coatings 291
- 10.3.3 LED Encapsulants 292
- 10.3.4 Electrochromic and Electrofluorochromic Bifunctional Materials 294
- 10.3.5 Self-Healing Polymeric Materials 294
- 10.3.6 Composite Materials 295
- 10.3.7 Fabrication of Hybrid LPSQ-Grafted Multiwalled Carbon Nanotubes (MWNTs) 296
- 10.3.8 The Fabrication of Supermolecular Structures 296
- 10.4 Perspectives 297
- References 297

11 DNA as a Ladder Polymer, from the Basics to Structured Nanomaterials 301

Shigeki Sasaki

- 11.1 Basics 301
- 11.1.1 Synthesis 302
- 11.1.2 Stacking Interactions 304
- 11.1.3 Sugar Packerings 304
- 11.1.4 Conformations of Nucleobase 305
- 11.1.5 Hybridization and Dissociation 306
- 11.2 Noncanonical DNA Structures 307
- 11.2.1 Triple-Stranded DNA 307
- 11.2.2 G-Quadruplex DNA 307
- 11.2.3 Cytosine-Rich Four Stranded DNA 308
- 11.2.4 Branched DNA 309
- 11.3 DNA Nano Assembly 310
- 11.3.1 DNA Rod-Like 1D Wire 310
- 11.3.2 DNA Nanomaterial (DNA Origami) 311
- 11.4 Selected Examples of Biotechnology 313
- 11.4.1 Triple Helix DNA Formation with the Sequences for which the Natural Nucleotides Do Not Recognize 314
- 11.4.2 W-shaped Nucleoside Analogs (WNAs) for TA and CG Inversion Sites 315
- 11.4.3 Pseudo-dC Derivatives (^{Me}AP-ΨdC) for a CG Inversion Site 315
- 11.4.4 Base- and Sequence Selective RNA Modification by the Functionality Transfer Oligonucleotides 316
- 11.5 Conclusion 319
- References 319

12 Twisted Ladder Polymers: Dynamic Properties of Cylindrical Double-Helix Oligomers with Axial Hydrophobic and Hydrophilic Groups 323

Masahiko Yamaguchi

- 12.1 Ladder and Double-Helix Polymers/Oligomers 323
- 12.2 Double-Helix Oligomers with Long Alkyl Groups at the Axial Positions 327

12.2.1	Anisotropic Films Formed from Liquid Crystal Gels (LCGs)	327
12.2.2	Polymorphism Involving Lyotropic Liquid Crystal Gels	330
12.2.3	Concentric Giant Vesicle Formation	331
12.3	Synthesis and Properties of Long Polymethylene Compounds	333
12.4	Double-Helix Oligomer Formed from Pendant Oligomer	335
12.5	Hydrophilic Double-Helix Oligomers with Axial TEG Groups in Aqueous Solvents	336
12.5.1	Properties of Liquid Water	336
12.5.2	Inverse Thermoresponse of Homo-Double-Helix Oligomer in Aqueous Solvents	337
12.5.3	Inverse Thermoresponses in Different Aqueous Solvents	340
12.5.4	Jumps in Thermoresponse to a Small Change in Water Content	342
12.6	Conclusions	344
	Acknowledgments	344
	References	345
13	Coordination Ladder Polymers: Helical Metal Strings	349
