Preface *xi*

1	A Brief Introduction to Molecular Aggregates	1
	<i>Jiaqiang Wang, Juqing Gu, Guigui Ye, Wei Cao, Meng Wang, Changzun Jiang, Shuhui Li, Arui Huang, Qianqian Li, and Zhen Li</i>	
1.1	Introduction	1
1.1.1	Motivation	1
1.1.2	A Brief History	4
1.1.3	Basic Knowledge of Organic Compounds in Aggregated States	7
1.1.3.1	The Driving Force of Molecular Aggregates	7
1.1.3.2	The Adjustment of Molecular Interactions in Molecular Aggregates	10
1.1.4	Overview of Topics Covered	13
	References	17
2	The Molecular Engineering and Fabrication Processes for Molecular Aggregates	33
	<i>Yujie Yang, Boxi Wu, Wentao Yuan, Shiyue Tang, Panpan Qiao, Yifan Niu, Peidong Xie, Ruixing Wang, Yan Gao, Yuexin Li, Wannu Yao, Kai Wang, Qianqian Li, and Zhen Li</i>	
2.1	Crystal Engineering	33
2.1.1	Organic Crystals Grown from Solution	34
2.1.1.1	Solvent Evaporation Method	34
2.1.1.2	Slow Cooling Method	36
2.1.1.3	Vapor Diffusion Method	36
2.1.1.4	Liquid–Liquid Diffusion Method	37
2.1.2	Vapor Phase Growth Method	37
2.1.3	Melt Growth	37
2.1.3.1	Bridgman–Stockbarger Method	38
2.1.3.2	Subcooled Melt Method	38
2.1.3.3	Zone-melting Recrystallization	39
2.1.3.4	Czochralski Growth Method	40
2.1.3.5	Laser Heating Base Method	40
2.2	Self-assembly System	41

2.2.1	Drivers of Molecular Self-assembly	41
2.2.1.1	Hydrogen Bonding Interactions	41
2.2.1.2	Hydrophobic Effect	42
2.2.1.3	Electrostatic Interactions	43
2.2.1.4	π - π Interaction	43
2.2.1.5	Coordination Interactions	43
2.2.2	Aggregation Types in Molecular Self-assembly	44
2.2.2.1	Nanoparticles	44
2.2.2.2	Membranes	44
2.2.2.3	Micelles	45
2.2.3	Control Methods of Molecular Self-assembly	45
2.2.3.1	Stimuli-responsive Self-assembly	46
2.2.3.2	Solvent Evaporation Self-assembly	46
2.2.3.3	Template-guided Self-assembly	48
2.2.3.4	Adsorption-based Self-assembly	48
2.3	Gel System	49
2.3.1	Chemical Gels	50
2.3.1.1	Free Radical Polymerization	50
2.3.1.2	Dynamic Covalent Cross-linking	51
2.3.1.3	Radiation Cross-linking	52
2.3.2	Supramolecular Gels	53
2.3.2.1	Electrostatic Interactions	53
2.3.2.2	Hydrophobic Interactions	54
2.3.2.3	Crystallization	55
2.3.2.4	Hydrogen Bonding	55
2.3.2.5	Ligand Binding	56
2.3.2.6	Host-Guest Interaction	58
2.4	Cross-linking System	59
2.4.1	Chemical Cross-linking	59
2.4.1.1	Triggered by Chemical Agents	59
2.4.1.2	Triggered by Heat	60
2.4.1.3	Triggered by Light	61
2.4.1.4	Triggered by Radicals	61
2.4.2	Physical Cross-linking	62
2.4.2.1	Physical Entanglement	63
2.4.2.2	Hydrogen Bonding	63
2.4.2.3	Crystallization	63
2.4.2.4	Ionic Interactions	63
2.4.2.5	Self-assembly and Supramolecular Interactions	63
2.4.3	Radiation Cross-linking	63
2.4.4	The Advantages of Cross-linking in the Regulation of Aggregated Structures	64
2.4.4.1	Fixed Orientation and Structural Stability	64
2.4.4.2	Enhanced Mechanical Properties	65
2.4.4.3	Dynamic Covalent Bonding for Adaptive Materials	66

2.5	Host–Guest System	67
2.5.1	Non-covalent Interactions in the Host–Guest System	68
2.5.1.1	Hydrogen Bonding	68
2.5.1.2	Hydrophobic Interactions	69
2.5.1.3	Electrostatic Interactions	69
2.5.1.4	π – π Interactions	70
2.6	Conclusion	70
	References	70
3	The Research Methodology of Molecular Aggregation Science	87
	<i>Jiajia Song, Aisen Li, Kun Yang, Weilong Che, and Zhen Li</i>	
3.1	The Theoretical Calculation	87
3.1.1	Introduction	87
3.1.2	Overview of Quantum Chemistry Calculation	88
3.1.2.1	Ab Initio Calculation	89
3.1.2.2	Density Functional Theory	91
3.1.2.3	Semiempirical Molecular Orbital Methods	92
3.1.3	Calculation Software	94
3.1.3.1	Gaussian	94
3.1.3.2	VASP	94
3.1.4	Calculation of the Properties of Semiconductor Opto-electronic Materials	95
3.1.4.1	Structure Optimization	95
3.1.4.2	Band Structure and Density of States	96
3.1.4.3	Thermodynamic Stability and Chemical Formation Energy	96
3.1.4.4	Carrier Effective Mass	96
3.1.4.5	Optical Absorption Spectrum	99
3.1.4.6	Exciton and Binding Energy of Exciton	100
3.1.5	Conclusion and Outlook	101
3.2	General Methods	102
3.3	Other Methods (Pressure, Light, and Temperature)	108
3.3.1	Pressure	109
3.3.1.1	Mechanical Grinding	110
3.3.1.2	Hydrostatic Pressure	112
3.3.2	Light	114
3.3.3	Temperature	116
3.3.4	Chemical Substances	117
	References	119
4	Photoluminescence of Molecular Aggregates	125
	<i>Jie Yang, Manman Fang, and Zhen Li</i>	
4.1	Introduction	125
4.2	Fluorescence	127
4.2.1	Aggregation-induced Emission	127
4.2.2	Excimer	130

4.2.3	J/H/X Aggregate	133
4.3	Thermally Activated Delayed Fluorescence (TADF)	137
4.3.1	Generation of Delayed Fluorescence	137
4.3.2	Aggregation-induced Delayed Fluorescence	138
4.3.3	Through-space Charge Transfer based TADF	141
4.3.4	Exciplex-based TADF	143
4.4	Phosphorescence	145
4.4.1	Room-temperature Phosphorescence	145
4.4.2	Nonaromatic Room-temperature Phosphorescence	149
4.4.3	Long Persistent Luminescence	152
4.5	Conclusion	155
	References	155
5	Mechanoluminescence of Molecular Aggregates	163
	<i>Yujun Xie, Jinfeng Wang, and Zhen Li</i>	
5.1	The Emission Mechanism of Mechanoluminescence	163
5.1.1	Brief Introduction to the History of Organic Mechanoluminescence	163
5.1.2	ML Derives from the Gas Discharge of Organic Crystal Without Luminescent Center	165
5.1.3	ML from the Organic Compounds Contain Luminescent Center	167
5.2	Organic Crystals with Fluorescent Mechanoluminescence	169
5.2.1	Triphenylamine Derivatives	169
5.2.2	Tetraphenylethylene Derivatives	172
5.2.3	N-containing Heterocyclic Derivatives	178
5.3	Organic Crystals with Phosphorescent Mechanoluminescence	186
5.4	Mechanoluminescence from Doping System	188
5.5	Special Mechanoluminescence Phenomena	191
5.6	Summary	192
	References	193
6	Molecular Aggregates as Charge Transport Layers in Perovskite Solar Cells	199
	<i>Shuyan Shao and Zhen Li</i>	
6.1	Introduction	199
6.2	Construction and Work Principle	202
6.2.1	Device Structure	202
6.2.2	Work Principle	203
6.3	Small Molecules as Hole Transport Layers in HPSCs	204
6.3.1	Chemically Doped Small Molecule HTLs	205
6.3.2	Dopant-free Small Molecule HTLs	218
6.3.2.1	Undoped HTLs in n-i-p Structure	219
6.3.2.2	Undoped HTMs in p-i-n Structure	221
6.4	Small Molecules as ETLs in HPSCs	223
6.4.1	Fullerene and Derivatives	223
6.4.2	Non-fullerene Small Molecules	227

6.4.2.1	Perylene Diimides (PDIs) as ETLs in HPSCs	227
6.4.2.2	NDIs as ETLs in HPSCs	231
6.4.2.3	Azaacene-based Small Molecules as ETLs in HPSCs	233
6.4.2.4	IDT-based Small Molecules as ETLs in HPSCs	234
6.4.2.5	Other Small Molecules as ETLs	237
6.5	Conclusion	238
	References	239
7	Molecular Aggregates as Active Layers in Organic Solar Cells	245
	<i>Jin He, Yibin Li, Zhong'an Li, and Zhen Li</i>	
7.1	Introduction	245
7.1.1	Effects of Donor Aggregates	248
7.1.1.1	Effects of Acceptor Aggregates	259
	References	273
8	Molecular Aggregates for Second-order Nonlinear Optical Effect	281
	<i>Wenbo Wu and Zhen Li</i>	
8.1	Microscopic and Macroscopic Nonlinearities of Organic Systems	281
8.2	Organic Molecules for Second-order Nonlinear Optics	284
8.3	Polymers for Second-order Nonlinear Optics	287
8.4	Summary and Perspective	301
	Acknowledgements	302
	References	302
9	Other Opto-electronic Materials in Aggregate	311
	<i>Shaoqiang Dong, Meiting Zhao, Zhijun Ruan, Zekun Tong, Yutian Qin, Chaoyang Zheng, Xinfang Zhang, and Zhen Li</i>	
9.1	Magnetic Materials	311
9.1.1	Introduction	311
9.1.2	Molecular Magnetic Materials	311
9.1.3	Summary and Perspective	322
9.2	Metal–Organic Frameworks	322
9.2.1	Introduction	322
9.2.2	Structure of Opto-electronic MOFs	323
9.2.2.1	TBAPy-based MOFs	324
9.2.2.2	TCBPE-based MOFs	325
9.2.2.3	TCPP-based MOFs	326
9.2.2.4	Other MOFs	328
9.2.3	Properties of Opto-electronic MOFs	330
9.2.4	Summary	332
9.3	Covalent Organic Frameworks	333
9.3.1	Introduction	333
9.3.2	Construction of COFs with Different Aggregation States	334
9.3.3	Properties of COFs with Different Aggregation States	336
9.3.3.1	Optical Properties of COFs	336

9.3.3.2	Semiconducting Properties of COFs	339
9.3.4	Summary and Perspectives	342
9.4	Organic Radical Materials	343
9.4.1	Introduction	343
9.4.2	Triarylmethyl-based Fluorescent Radical Materials	343
9.4.3	π -conjugated Conductive Radical Materials	352
9.4.4	Charged Radical Materials	358
9.4.5	Room-temperature Ferromagnetic Radical Materials	361
9.4.6	Summary and Perspective	362
	References	363
10	Conclusions and Outlook	377
	<i>Zhen Li</i>	
	Index	379
