Preface xv

Foreword xix

- 1 Enantioselective Synthesis of Cyclopropenes** 1
Virginie Carreras and Thierry Ollevier
- 1.1 Introduction 1
- 1.1.1 Synthesis of Cyclopropenes 1
- 1.1.2 Reactivity of Cyclopropenes 2
- 1.2 Metal-Catalyzed Enantioselective Syntheses of Cyclopropenes 3
- 1.2.1 Rhodium Catalysis 3
- 1.2.2 Copper Catalysis 9
- 1.2.3 Iridium Catalysis 9
- 1.2.4 Cobalt-Chiral Porphyrin Catalysis 10
- 1.2.5 Gold and Silver Catalysis 10
- 1.2.6 Biocatalysis 13
- 1.3 Other Synthetic Routes and Derivatizations of Enantioenriched Cyclopropenes 13
- 1.4 Summary and Prospect 15
- References 15
- 2 Chiral Heterocycles for Asymmetric Synthesis** 21
Radovan Šebesta and Tibor Peňaška
- 2.1 Introduction 21
- 2.2 Small-Ring Heterocycles 21
- 2.3 Medium-Ring Aliphatic Heterocycles 29
- 2.4 Other Heterocyclic Building Blocks 37
- 2.5 Conclusions 38
- References 39
- 3 Saturated Heterocycles as Chiral Auxiliaries** 43
Agnieszka Październiok-Holewa and Sebastian Stecko
- 3.1 Introduction 43
- 3.2 Proline-Derived Chiral Auxiliaries 43

3.3	2,5- <i>trans</i> -Disubstituted Pyrrolidines	46
3.4	Heterocyclic Hydrazones	50
3.5	Oxazolidine-Based Chiral Auxiliaries	57
3.6	Camphor-Based Chiral Heterocyclic Auxiliaries	60
3.7	Phosphoramidate-Based Chiral Auxiliaries	68
3.8	Schöllkopf's Chiral Auxiliaries and Related Heterocycles for the Asymmetric Synthesis of α -Amino Acids	72
3.9	Conclusions	73
	References	74
4	<i>trans</i>-1,2-Diaminocyclohexane and Its Derivatives in Asymmetric Organocatalysis	87
	<i>Michał Kopyt, Michał P. Głowacki, and Piotr Kwiatkowski</i>	
4.1	Introduction	87
4.2	<i>trans</i> -1,2-Diaminocyclohexane-Based Organocatalysts	89
4.3	Application of <i>trans</i> -1,2-Diaminocyclohexane Derivatives in Asymmetric Organocatalysis	96
4.3.1	Michael Additions of Malonate Esters to Nitrostyrene	97
4.3.2	Michael Additions of Other 1,3-Dicarbonyls to Nitrostyrene	98
4.3.3	Michael Additions of Enolizable Ketones and Aldehydes to Nitrostyrene	99
4.3.4	Michael Additions of Other Carbon Nucleophiles to Nitrostyrene	101
4.3.5	Michael Additions of Heteronucleophiles to Nitrostyrene	102
4.3.6	Michael Reactions of Enones	102
4.3.7	Michael Reactions of Benzylidene Pyruvates	103
4.3.8	Reactions of Isatin-Derived Michael Acceptors	104
4.3.9	Michael Reactions of Maleimides	105
4.3.10	Aldol Reaction and Other Asymmetric Reactions of Aldehydes	106
4.3.11	Reactions of Isatins	107
4.3.12	Reactions of Imines	108
4.3.13	Pictet–Spengler-Type Reactions	109
4.3.14	Reactions of Nitrogen Electrophiles	110
4.3.15	Miscellaneous Reactions	111
4.4	Conclusions	113
	References	113
5	Diketopiperazines as Chiral Building Blocks	139
	<i>Juan Domingo Sánchez, Juan Francisco González, and José Carlos Menéndez</i>	
5.1	Introduction	139
5.2	A Brief Overview of the Synthesis of 2,5-Diketopiperazines	140
5.2.1	Methods that Create the N ₁ —C ₂ Bond	140
5.2.1.1	Cyclization of Dipeptides	140
5.2.1.2	Cyclization of Ugi Reaction Products	141
5.2.1.3	Staudinger/Intramolecular Aza-Wittig Sequences	142
5.2.1.4	DKP Formation Coupled to Additional Cyclization Reactions	143

5.2.2	Methods that Create the N ₁ —C ₆ Bond	143
5.2.2.1	From α -Haloacyl Amino Acids	143
5.2.2.2	By Aza-Michael Additions	144
5.2.3	Methods that Create Two Bonds	144
5.2.3.1	Formation of N ₁ —C ₆ and N ₄ —C ₃ Bonds	144
5.2.3.2	Formation of N ₁ —C ₂ and N ₁ —C ₆ Bonds	144
5.2.4	Biotechnological Methods	145
5.3	2,5-Diketopiperazines in Drug Synthesis	145
5.3.1	Synthesis of Tadalafil	145
5.3.2	Synthesis of Trofinetide (NNZ-2591)	146
5.3.3	Synthesis of Aplaviroc	147
5.3.4	Synthesis of Retosiban	147
5.4	Natural Product Synthesis	148
5.4.1	Asymmetric Synthesis of Amino Acids	148
5.4.2	Synthesis of Alkaloids Containing a 2,5-Diketopiperazine Core	149
5.4.2.1	Tryprostatin B	149
5.4.2.2	Spirotryprostatin B	150
5.4.2.3	Stephacidin B	150
5.4.2.4	Versicolamide B	151
5.4.2.5	Variecolortide A	151
5.4.2.6	Dideoxyverticillin	152
5.4.3	Synthesis of Alkaloids Containing a Modified 2,5-Diketopiperazine Core	153
5.4.3.1	Ardeemin	153
5.4.3.2	Phakellin	153
5.4.3.3	Sarcodonins	154
5.4.3.4	Ecteinascidin 743	155
5.5	Conclusions	156
	References	157
6	Amino Acids as Chiral Building Blocks	161
	<i>Elisabete P. Carreiro and Anthony J. Burke</i>	
6.1	Introduction	161
6.2	Chiral Substrates/Reagents	161
6.2.1	Chiral Amino Acids	161
6.3	Chiral Auxiliaries	165
6.3.1	Chiral Pyrrolidine Auxiliaries	166
6.3.1.1	Yamada Auxiliary	166
6.3.1.2	Enders Auxiliaries	166
6.3.2	Schöllkopf's Bis-lactim Ethers (Schöllkopf Chiral Auxiliaries): Glycine Enolate Equivalents	167
6.3.3	Oxazolidinones	168
6.3.3.1	Evans' Chiral Auxiliary	168
6.3.3.2	SuperQuat Chiral Auxiliaries	170
6.4	Oxazaborolidines	172

- 6.5 Organocatalysts 172
 - 6.5.1 Amino Acid and Peptide-Based Organocatalysts 173
 - 6.5.2 Organocatalysts Based on Proline 174
 - 6.5.2.1 Proline 174
 - 6.5.2.2 Proline Amides and Peptides 177
 - 6.5.2.3 Diarylprolinol Silyl Ether and Analogous Systems 179
 - 6.5.2.4 Other Proline Analogues 184
 - 6.5.3 Imidazolidinones 187
 - 6.5.4 Amidine-Based Organocatalysts 190
- 6.6 Conclusions 191
- References 191

- 7 Carbohydrate-Based Catalysts and Auxiliaries in Organic Synthesis 197**
Sebastian Baś, Szymon Buda, and Jacek Młynarski
 - 7.1 Chiral Auxiliaries 197
 - 7.1.1 Chiral Imines 198
 - 7.1.2 Chiral Oxazolidinones 202
 - 7.1.3 Chiral Esters 204
 - 7.1.4 Chiral Ethers 211
 - 7.2 Chiral Catalysts 213
 - 7.2.1 Chiral Complexes 214
 - 7.2.2 Organocatalysts 220
 - References 225

- 8 Monoterpenes as Chiral Building Blocks 235**
Agata J. Pacuła-Miszewska, Magdalena Obieziurska-Fabisiak, and Jacek Ścianowski
 - 8.1 Introduction 235
 - 8.2 Acyclic Monoterpene Building Blocks 237
 - 8.3 Monocyclic Terpene Building Blocks 243
 - 8.4 Bicyclic Terpene Building Blocks 256
 - 8.5 Conclusions 261
 - References 262

- 9 Diterpene Acids as Starting Materials for the Synthesis of Biologically Active Compounds 267**
Ignacio E. Tobal, Alejandro M. Roncero, Rosalina F. Moro, David Díez, and Isidro S. Marcos
 - 9.1 Zamoranic Acid 1 as a Precursor of Interesting Compounds 269
 - 9.1.1 Synthesis of Chrysolic Acid and Isofregenedol 269
 - 9.1.2 Synthesis of New Labdane Diterpenoids 271
 - 9.1.3 Synthesis of Drimanes 272
 - 9.1.3.1 Synthesis of Poligodial, Warburganal, Pereniporin A, and Pereniporin B 273

- 9.1.3.2 Synthesis of Isodrimeninol 273
- 9.1.4 Synthesis of Labdanolides and Furolabdanes 274
 - 9.1.4.1 Synthesis of (+)-Limonidilactone 274
 - 9.1.4.2 Synthesis of Gutierrezianolic Acid 274
- 9.1.5 Synthesis of Tri- and Tetracyclic Diterpenes 275
- 9.2 *Ent*-halimic Acid as a Precursor of Biologically Active Compounds and Other Interesting Derivatives 276
 - 9.2.1 Synthesis of *Ent*-halimanolides 278
 - 9.2.1.1 Synthesis of Natural *Ent*-halimanolide Synthesis 278
 - 9.2.1.2 Synthesis of α and β -Hydroxyhalimanolides 280
 - 9.2.1.3 Synthesis of Furo-*ent*-halimanolide 280
 - 9.2.2 Synthesis of Chettaphanins 281
 - 9.2.3 Synthesis of Sesterterpenolides 281
 - 9.2.3.1 Synthesis of Sesterterpenolides, Analogues of Dysidiolide 282
 - 9.2.4 Synthesis of Sesterterpenolide and Glycerol Hybrids 283
 - 9.2.5 Synthesis of Rearranged Compounds 283
 - 9.2.5.1 Synthesis of *Ent*-labdanes from *Ent*-halimanes 283
 - 9.2.5.2 Synthesis of Abeopicrasanes from *Ent*-halimanes 284
 - 9.2.5.3 Synthesis of [4.3.3]propellanes from *Ent*-halimanes 285
 - 9.2.6 Synthesis of Quinone/Hydroquinone Sesquiterpenes 285
 - 9.2.7 Synthesis of Sesqui- and Diterpene Alkaloids 286
 - 9.2.7.1 Synthesis of the Diterpene Alkaloid, (+)-Agelasine C 287
 - 9.2.7.2 Synthesis of Diterpene Alkaloid, (+)-Thiersindole C 288
 - 9.2.7.3 Synthesis of Sesquiterpenyl Indoles 289
 - 9.2.7.4 Synthesis of Sesquiterpene Indoles, Analogues of Polyalthenol and Pentacyclindole 289
- Acknowledgments 290
- References 291

10 Alkaloids as Chiral Building Blocks, Auxiliaries, Ligands, and Molecular Diversity 297

Karol Kacprzak, Elżbieta Wojaczyńska, Andrzej Trochimczuk, Franz Steppeler, and Jacek Wojaczyński

- 10.1 Introduction 297
- 10.2 Ephedra Alkaloids 303
- 10.3 Tobacco Alkaloids (Nicotine and Anabasine) 311
- 10.4 Lupin Alkaloids 314
- 10.5 *Cinchona* Alkaloids 325
- 10.6 Tropane Alkaloids 335
- 10.7 Alkaloids as Building Blocks in the Syntheses of Chiral Polymers and Their Application 338
 - Acknowledgments 345
 - References 345

- 11 Chiral Building Blocks for Total Steroid Synthesis and the Use of Steroids as Chiral Building Blocks in Organic Synthesis 367**
Izabella Jastrzębska and Douglas F. Covey
- 11.1 Introduction 367
 - 11.2 Chiral Building Blocks for the Construction of Steroids 368
 - 11.2.1 Chiral Building Block 1 (CBB 1) 368
 - 11.2.2 Chiral Building Block 2 (CBB 2) 369
 - 11.2.3 Chiral Building Block 3 (CBB 3) 370
 - 11.2.4 Chiral Building Block 4 (CBB 4) 370
 - 11.2.5 Chiral Building Block 5 (CBB 5) 371
 - 11.2.6 Chiral Building Block 6 (CBB 6) 372
 - 11.2.7 Chiral Building Block 7 (CBB 7) 373
 - 11.2.8 Chiral Building Block 8 (CBB 8) 374
 - 11.2.9 Chiral Building Block 9 (CBB 9) 375
 - 11.3 Steroids as Chiral Building Blocks 376
 - 11.3.1 Synthesis of C-nor-D-homo-Steroids 376
 - 11.3.2 Pregnenolone as a Chiral Building Block: Synthesis of Cyclocitrinol 377
 - 11.3.3 4-Androstene-3,17-Dione as a Chiral Building Block: Synthesis of Vulgarobufotoxin 377
 - 11.3.4 Ergosterol as a Chiral Building Block 378
 - 11.3.4.1 Synthesis of Pleurocin A/Matsutakone 378
 - 11.3.4.2 Synthesis of Strophasterol A 379
 - 11.3.4.3 Synthesis of Herbarulide 379
 - 11.3.4.4 Synthesis of Pinnigorgiol E and Pinnigorgiol B 380
 - 11.3.5 Tigogenin as a Chiral Building Block 381
 - 11.3.5.1 Synthesis of Clathsterol 381
 - 11.3.5.2 Synthesis of Nortriterpenoid Propindilactone G 383
 - References 384
- 12 Chiral Organophosphorus Compounds in Asymmetric Synthesis 389**
Elżbieta Łastawiecka, Sylwia Sowa, Katarzyna Szwaczko, Kamil Dziuba, Marek Stankevič, and Adam Włodarczyk
- 12.1 Introduction 389
 - 12.2 Organophosphorus Compounds with Incorporated Chiral Terpene Moieties 389
 - 12.3 Organophosphorus Compounds with Axial Chirality 397
 - 12.4 Chiral Aminophosphonic Acids and Their Analogs 406
 - 12.5 Stereogenic Organophosphorus Compounds with P—N and/or P—O Bonds 418
 - 12.6 Summary 425
 - References 426

- 13 Organosulfur Compounds as Chiral Building Blocks 441**
Maria A.M. Capozzi and Cosimo Cardellicchio
- 13.1 State of the Art 441
 - 13.2 Introduction 441
 - 13.3 The Tradition 442
 - 13.3.1 Menthyl (R_S)- or (S_S)-*p*-toluenesulfinate (Andersen's Reagent) 442
 - 13.3.2 (R)-*p*-Toluenesulfonamide (Davis' Reagent) 449
 - 13.3.3 (1*S*, 2*R*, 5*S*)-Menthyl (S)-*p*-Bromophenylsulfinate 451
 - 13.3.4 (R)-*tert*-Buthyl *tert*-Butanethiosulfinate (Ellman's Reagent) 452
 - 13.3.5 Sulfoximines 454
 - 13.4 Ideas for the Future 454
 - 13.4.1 DAG-Chemistry 454
 - 13.4.2 Aryl Benzyl Sulfoxides 455
 - 13.5 Conclusions 456
 - References 456
- 14 Organoselenium Compounds as Chiral Building Blocks 463**
Luana Bagnoli and Claudio Santi
- 14.1 Introduction 463
 - 14.2 Asymmetric Selenofunctionalization Reactions Promoted by Electrophilic Selenium Reagents 463
 - 14.3 Vinyl Selenones as Important Building Blocks in Asymmetric Processes 470
 - 14.4 Asymmetric Synthesis by Michael-Initiated Ring Closure Reactions from Vinyl Selenones 470
 - 14.5 Functionalization of Vinyl Selenones of Carbohydrates and Nucleotides 472
 - 14.6 Asymmetric Organocatalytic Transformations Starting with Vinyl Selenones 475
 - 14.7 Conclusion 481
 - References 481
- 15 Allenes as Chiral Building Blocks in Asymmetric Synthesis 489**
Rafał Loska and Alicja Wasilewska-Rosa
- 15.1 Introduction 489
 - 15.2 Nucleophilic Addition and Substitution 490
 - 15.3 Allenylzinc and Indium Reagents, Allenylsilanes and Allenylstannanes 491
 - 15.4 Epoxidation, Aziridination, and Silacyclopropanation of Allenes 494
 - 15.5 Nazarov Cyclization of Allenyl Vinyl Ketones 499
 - 15.6 Nucleophilic Cyclization and Addition Promoted by Electrophiles 500
 - 15.7 Cycloisomerization and Other Reactions Catalyzed by Transition Metals 510

- 15.8 Cycloaddition of Allenes 513
Acknowledgments 517
References 517
- 16 The Synthesis and Application of BINOL Derivatives as Effective Building Blocks for Catalysts Employed in Enantioselective Synthesis 523**
Janusz Jurczak, Patryk Niedbała, and Agata Tyszką-Gumkowska
- 16.1 Introduction 523
16.2 BINOL Derivatives with Free Hydroxyl Groups 524
16.2.1 Allylboration Reactions 525
16.2.2 Conjugated Addition Reactions 526
16.2.3 Other Examples 526
16.3 Onium Salts as Charged Catalysts in PTC 529
16.4 Chiral Phosphoric Acids Derived from BINOL Platform 533
16.4.1 Michael Reaction 533
16.4.2 Friedel–Crafts Reaction 534
16.4.3 Diels–Alder Reaction 535
16.4.4 1,3-Dipolar Cycloaddition 538
16.4.5 Multicomponent Reactions 539
16.4.6 Other Examples 543
Acknowledgments 544
References 545
- 17 Chiral Acenes: Synthesis and Applications 551**
Andrea Nitti, Giovanni Preda, and Dario Pasini
- 17.1 Introduction 551
17.2 Chiral Carbo[*n*]helicenes 552
17.2.1 Structure and Properties of Helicenes 553
17.2.1.1 Topological Description 553
17.2.1.2 Aromaticity and Optoelectronic Properties 554
17.2.1.3 Chirality of Helicene 557
17.2.2 Racemic Synthesis and Optical Resolution Methods 559
17.2.2.1 Metal-Free Photocyclization Reactions 559
17.2.2.2 Diels–Alder Cycloaddition 560
17.2.2.3 Friedel–Crafts-Type Cyclization 560
17.2.2.4 Metal-Catalyzed Reactions 561
17.2.2.5 Optical Resolution 564
17.2.3 Asymmetric Syntheses 565
17.2.4 Application of Chiral Carbo[*n*]helicenes 567
17.2.4.1 Helicenes in Catalysis 567
17.2.4.2 Helicenes in Organic Electronics 569
17.2.4.3 Helicenes in Biochemistry 571
17.3 Twistacenes 571
17.4 Chiral Nanobelts 572

17.5	Concluding Remarks	575
	References	575
18	2-Aza-21-Carbaporphyrin in Construction of Chiral Supramolecular Assemblies	583
