

Index

a

- abnormal glow discharge 201, 206, 207, 441
- abrasions, acute wounds 666
- abscopal plasma effects 713
- absolute quenching of products 348–351, 535
- absorbed DBD energy doses 660
- accidental cell death 594
- accommodation coefficient 56, 395
- acetylene (C₂H₂) 464, 466
 - conversion methane to 529–530
 - and ethylene 525–526
- acetylene production 527–528
 - energy cost of 529
 - from methane 530
- acidic behavior, effect of 39
- acidic neutralization 517
- acoustic wave
 - in high-frequency limit 159–160
 - intensive plasma-chemical reaction 160
 - in molecular gas at equilibrium 159
 - in nonequilibrium plasma 159–160
- actin filaments (microfilaments) 569
- actinic keratosis 709–711
- action of UV radiation 587
- activation energy, of excited molecules 64
- active corona volume 278–281, 294
- active plasma cleaning 441
- active transport 571–572
- acute wound healing 666, 668, 679
- adaptive anti-tumor response 714
- adenosine triphosphate (ATP) 570, 572–573, 594, 656–658, 708, 712–713
- adiabatic Massey parameter 26, 41
- adiabatic motion 216
- adiabatic principle 25–26, 216, 224
- admixture of halogens 378
- aerodynamic plasma actuators 493–494
- aerosol breakdown 316
- aerosol density 311, 313, 317
- aerosol photoionization 311–313
- agar phantoms representing living tissue 652
- agricultural products
 - conglomeration 614
 - plasma-activated water to 619
 - plasma disinfection or sterilization 615
 - sophisticated surfaces of 614
- airborne microorganisms 595, 605
 - PDRF 598
- air plasma spray 411–413
- Alfassi–Benson method 64
- Alfven current 321
- Alfven velocity 140, 155–156, 215–216, 218
- Alfven wave 140, 158
- Alkhazov's equation 322–323
- alpha-regime
 - ionization rate 259
 - sheath parameters in 260
- aluminum nanoparticles, synthesis of 425
- aluminum nano-powders 425
- ambipolar diffusion 84–87, 133, 154, 184, 186, 208, 210, 256
- ammonia dissociation 386
- ammonia (NH₃) synthesis 384–385
- amorphous Si-film deposition 442–445
- Ampere force 152
- angiogenesis stimulation 689, 702–703
- anharmonic oscillators 54, 58, 92, 93
- animal-like cells 569
- anisotropic etching 9, 431–432, 434–435, 437, 439–440
- anisotropy
 - EEDF 78–80
 - requirements 432
- annexin-V assay 708
- anode dark space 199
- anode-directed or negative streamer 180
- anode–electrolyte interface 418
- anode glow 199
- anode layer 198, 227
 - energy balance of 227–228
 - of glow discharges 207–208

- anode spots 220, 227–228, 418
 anode voltage drop 228
 antigen-presenting immune cells (APC) 713
 antigen-specific T-cells 713
 antioxidant drug 700
 antioxidants 577, 668, 706
 anti-tumor effects 647, 656–657, 707
 apoptosis 594
 bodies 707
 vs. necrosis 707, 709
 APPJ surface power density 292
 τ -approximation 72
 aquaporins (AQPs) 572, 585, 709
 aqueous film forming foam (AFFF) 518
 arc discharges
 cathode layer of 224–226
 positive column of 228–231
 arcing 210, 234, 341
 arc positive column 219, 228–233, 243
 argon beam coagulators (ABS) 679–680
 argon plasma afterglow jet 675
 argon plasma coagulators (APS) 411–412, 414, 639,
 679–680, 686
 armchair configuration 427
 Ar–N₂ mixture 465
 Arrhenius formula 33, 63, 68, 438, 440, 564
 arterial ulcers 666, 668
 associative detachment 32, 507
 associative ionization 20, 26
 Aston dark space 199
 asymmetric DBDs 170, 290, 493
 asymmetric RF CCP discharges 264–267
 atmospheric pressure DC micro-glow discharge 307
 atmospheric pressure gliding arc plasma 610
 atmospheric pressure glow discharges (APG) 213–214,
 218, 291–292, 470
 atmospheric-pressure micro-glow discharge 306–308, 310
 atmospheric pressure nonthermal discharges 30, 556, 588
 atmospheric pressure plasma jets (APPJ) 292–293, 466,
 534, 647
 atmospheric pressure plasma sources 567, 610, 627
 atmospheric pressure RF glow discharges 250
 atmospheric uniform glow discharges 615
 atomic layer deposition (ALD) 446–447
 attachment instability 194–196
 attenuation of electromagnetic wave 144
 aurora borealis 4, 5
 auto-ignition limit 484–486
 mechanisms and kinetics of 483–484
 auto-ignition of H₂–O₂ 484
 auto-thermal regimes 459
 autotrophs 573
 avalanche-to-streamer transformation 180
 avalanche-to-streamer transition 182–184, 280, 287, 338
 average discharge power 287–289
 aviation fuels (like JP8) 462
 azimuthal drift 214–215
- b**
- Bachmann triangle 540, 543
Bacillus anthracis (anthrax) 588, 590–592
Bacillus cereus 590–592, 600
Bacillus thuringiensis 590
 back ionization wave 303, 305, 310
 bacterial spores 591
 bactericidal effect of plasma-generated ozone 582
 ballistic range tests 492
 ball lightning 305, 310
 battery effect 265
 beam instability 141–142, 321
 Bennet pinch 233–234
 Bennet relation 153
 Bessel function 187, 267
 Bethe-Bloch formula 24
 Bethe-Born approximation 323
 Bethe formula 320
 bioactive micro-xerography 703–705
 bioluminescent imaging (BLI) 709–710
 Bjerrum length 579, 585
 blackbody emission 123
 blast furnace process 391
 black metal 397
 blastoma 707
 blind streamers, effect of 644, 645, 652, 662
 Bloch–Bradbury mechanism 30
 blood coagulation cascade 682–683, 685, 686
 blood rheological properties 702–703
 Bohm sheath criterion 135
 Bohm velocity 135, 436, 445
 Bohr radius 46, 47, 83, 128
 boiler furnaces 487
 Boltzmann constant 18, 579, 635
 Boltzmann distribution 89–90, 92–94, 96, 98–99, 106, 109,
 111–112, 130, 133–134, 139, 359
 Boltzmann H-theorem 72
 Boltzmann kinetic equation 71–75
 Boltzmann law 24, 95, 129
 Boltzmann statistical distribution 112
 boomerang resonance 44, 45
 bootstrap effect 484–485, 503
 active neutrals related 485
 borides, synthesis of 406–407
 Born approximation 24, 47
 Boufendi–Bouchoule experiments 422

- Bouguer law 143–145, 252
 bound-bound transitions 120
 bovine spongiform encephalopathy (BSE) 593
 brain heart infusion (BHI) 602
 breakdown voltage 176, 177, 182, 201, 203, 236, 282, 289, 290, 314–316, 332, 333, 341, 342
 Breit–Wigner formula 43
 bremsstrahlung absorption
 coefficient of 122
 bremsstrahlung emission 120
 bulk heating 331, 332
 bullet mode 293
 Buneman instability 142
 burns 649, 666, 667, 675
 bystander effect 654, 709
- C**
- cadaver tissue treatment 650
 Ca^{2+} ionic factor 682–683, 686
 calcium carbonate 516, 517
 calcium-induced calcium release (CICR) 657, 658
 calcium ion wave propagation 656–658, 662
 Canady Vieira hybrid plasma scalpel 680
 cancer cells, plasma killing of 707
 canonical invariance 106–107
 C_2N_2 production 531
 capacitively coupled plasmas (CCP) 249–250, 254–264, 267–268, 270, 273–275, 292, 309, 318, 434, 536, 587, 706
 discharge, current-voltage characteristics 259
 capillary corona reactor 514
 capillary jet mode 309
 capillary plasma electrode (CPE) 309
 carbides, synthesis of 404
 carbon compounds 404, 434, 539–541
 thermal plasma dissociation 428
 carbon nanotubes 425, 427–429, 529
 surface modification of 428
 carbon oxides mixtures 538–539
 carbon suboxide (C_3O_2) 467–468, 479
 carbon tetrachloride (CCl_4) 434, 440, 498, 509, 511, 539
 carbothermic plasma reduction 396–397
 carbothermic reduction 396–397
 carcinoma 706, 710–711
 caspase cleavage 708
 cathode-directed or positive streamer 180
 cathode glow 199, 217, 218
 cathode layer(s) 198
 of arc discharges 224–226
 collisionless zone of 225
 energy balance of 227, 228
 quasi-neutral zone of 225
 cathode segmentation 213–214
 cathode spots 201, 204, 206, 219–220, 224, 227–228, 243, 303
 cathode vicinity 225–226
 cell attachment 703–705
 cell cultures 573, 654, 670–671, 709
 cell cycle 570, 573–574, 577, 709
 cell division processes 573
 cell membrane functions 568
 cell proliferation 645, 666, 671, 703–705, 708, 709
 cell-to-cell communication 577, 654–658, 662
 cell-to-cell signaling 654–655, 662
 cellular metabolism 573–574, 577, 585
 cellular sources of ROS 575
 centers of polymer growth 547, 548
 channel-forming proteins 571
 channel model 228–232, 243, 245, 246, 252
 chemical bonds, rearrangement of 40
 chemical decontamination of water 515
 chemical factor 347, 373
 chemical heat release 159–161, 165, 166, 193
 chemical lasers
 population inversion in 500
 chemical modification of the polyethylene (PE) surfaces 551
 child law sheaths 136–137, 149
 Chirikov stochasticity criterion 60, 358
 CH_4 liquefaction 469
 chlorine-based ion-assisted etching 438
 chlorine compounds 534–535, 537
 chlorine-containing VOC 510–511
 chlorofluorocarbons (CFCs) 514–515, 536, 537
 CH_4 – NH_3 mixture 532
 chromosomes, nonthermal plasma 569
 chronic wound healing 666–668, 678
 chronic wounds 10, 11, 665–668, 678, 679
 cleaning feedstock gases 441–442
 closed package
 bread disinfection in 617–618
 cherry tomatoes in 617
 strawberries in 617
 coal conversion 463–464, 468
 in thermal plasma jets 464–466
 coal cracking 464
 coal-fired power plant emissions 512–514
 coal gasification 466
 coal heating 464
 coal metamorphism 463
 coal oxidation process 468
 coal-to-carbon conversion 465
 coaxial cylinders 277
 coaxial flow stabilized arc 235

- coaxial-hollow micro dielectric-barrier discharge 308
- CO₂ dissociation 353, 355
 carbon and oxygen 363–364
 energy efficiency of 359
 gas-dynamic stimulation of 362–363
 mechanisms of 355–357
 physical kinetics of 357–359
 in supersonic cold plasma flows 360–362
 through electronic excitation 356
- CO₂ dissociation kinetics
 one-temperature approximation of 359
- coefficient of selectivity 103–105, 109
- CO₂ emission 467–468
- CO₂–H₂O mixture 476–478, 539, 543
- CO lasers 130, 499–500
- cold atmospheric pressure discharge 277
- cold atmospheric pressure plasma dermatology 687
- cold atmospheric-pressure plasma 615
- cold-smoked salmon 617
- collector 494
- collisional damping 138–139, 273
- collisional integral 71–72, 106
- collision ionization 20, 25–26
- collisionless plasma 143, 144, 157
- collisionless track expansion 326
- collisionless Vlasov equation 71
- collisionless zone 225, 226
- colloidal thrusters 489
- colony forming units (CFUs) 580, 587, 602, 646, 673
- combined plasma–catalytic approach 462
- completely ionized plasmas 4
- complete thermodynamic equilibrium (CTE) 111–112
- complex dielectric permittivity 143, 251
- complex ions 17, 18, 27
- complex organic synthesis 534
- CO–N₂ discharges 385
- conformal deposition 446–447
- CO–N₂ mixture 533–534
- conservation equations 72, 351
- conservation, plasma effect of 614
- constant microwave plasma conductivity model 252
- constant voltage
 periodic corona-current pulses at 281
- contact angles, PAW 634–635
- continuity equation 72–73, 83, 89, 138, 139, 148, 151, 158, 164, 201, 351, 352
- continuous corona discharges 277–281, 295
- continuous optical discharges 253–254
 energy balance of 254
 minimum power to 254
- continuous spectrum radiation 120–121, 311–313
- contracted microwave discharge 300
- contraction instability 190
- contraction, of positive column 210–211
- controlled-atmosphere plasma sprays (CAPS) 411, 413, 417
- convective cooling 213, 232
- co-planar configuration 216, 217
- corona and pulsed corona discharges 506
- corona discharge 6
 continuous 277–281, 295
 SO₂ 345
- corona electric field distribution 277, 279
- corona radical shower 507
- cosmetics, plasma 688–690
- Coulomb collisions 20–21, 303
- Coulomb coupling parameter 318
- Coulomb cross-section 82
- Coulomb crystals 318, 329
- Coulomb logarithm 82, 105, 328, 358
- covalent bonding 629
- COVID-19 pandemic 626
- Creutzfeldt–Jakob diseases (CJD) 593
- critical heat release 162, 163, 171, 361, 362
- critical heat release effect 163
- critical ionization degree 347, 373
- critical vibrational temperature 298, 372, 373
- cryogenic liquid plasma 339–340
- cryogenic plasma synthesis 385
- current-voltage characteristics 200–203, 208–210, 220, 228, 259
 of corona 279–280
 and discharge power 279–280
- cycle of concentration (COC) 516, 517
- cyclohexane (C₆H₁₂) 378, 457, 530, 545
- cyclotron frequency 81, 154, 157, 171, 265–267, 271–273
- cytokinesis 573
- cytoplasm 568–570, 572, 577, 594, 709, 713
- d**
- danger-associated molecular patterns (DAMP) 712, 713
- dark cathode space 199
- dark Townsend discharge 200, 201
- dart-leaders 304
- DBD filaments
 mode 282, 283
 patterning 284
 quasi-repulsion of 284
- DBD transition
 from filamentary to uniform mode 285
- DC-arc plasma spray 411–413
- DC sheaths 134–136
- DC thermal plasma 425
- Debye correction 114–115

- Debye radius 84–87, 133–139, 146, 313, 319, 329, 338, 562
- Debye shielding 133–134
- degradation length, of fragments 326
- degradation spectrum 322–323
kinetic equation for 322
- degree of ionization, in tracks of fragments 326
- Deinococcus radiodurans* 592
- dendritic cells 708, 712–713
- dense gas plasma lasers 499
- dental health 691–693
- dentinal tubules 690, 694
- depth of penetration 652–655, 657, 660, 714
- dextran sodium sulfate (DSS) model 699–700
- diamond films, plasma-chemical 539–542
- diamond-like carbon (DLC) 540
coatings 421
films 540–542
- diatomic molecules, statistical distribution 113–114
- dielectric barrier discharges (DBD) 7, 282, 284, 585, 590, 610, 659
discharges 514
memory effect 287
micro-discharges 282, 376
plasma 591
- dielectric barrier grating discharge (DBGD) 595–598, 605
- dielectric loss tangent 550
- dielectric permittivity, of plasma 143, 550
- diesel fuel 461–462, 478
- diesel oils 461–462
- diffusion coefficients, of electrons 84
- diffusive (homogeneous) regime 300
- dimensionless selectivity S 559
- dimethyl sulfide (DMS) 509–511
- diode configuration 450–451
- direct cell-to-cell contact signaling 656
- direct CH_4 incorporation 469–470
- direct current (DC) discharges 197, 219
- direct effect of externally applied electric fields 590
- direct H_2 production 475–476
- direct ionization 20, 22–23, 33, 41, 186, 224, 332–334, 338–339
- direct living tissue sterilization 648–649
- direct micro-patterning 420–422
- direct plasma disinfection 616
- direct plasma-induced disinfection 615–617, 636
- direct plasma treatment to cancer 707
- direct production
of germanium from its oxide 400
of indium from its oxide 399
of vanadium from its oxides 399
- direct pulsed-plasmas for water disinfection and sterilization 600–601, 605
- direct vs. indirect plasma effects 578–580
- discharge chamber, gas flow 213
- discharge current and voltage 200, 257
- discharge microstructure 298
- discharge poisoning effect 377, 389

 reduction 394–396
metamaterial cloaking 496, 503
metastable active species 620
metastable low-energy electronically excited oxygen 9
metastable plasma acids 620–622
metastable states 47–49, 498
methane
 direct decomposition of 459–461
 dry reforming of 458–459
 and nitrogen 531–532
 steam reforming of 458–459
 vibrational excitation of 530
methane–air and ethylene–air flows 484
methane conversion
 acetylene into 529–530
methane oxidation 537–538
methanol
 and formaldehyde 537–538
 production 538
microarc oxidation coating
 aluminum coating in sulfuric acid 417–418
 aluminum coating in sulfuric acid electrolyte 418–420
microarcs 417, 418
micro-deposition 420–422
microdischarge radiation 418
microdischarges
 atmospheric-pressure micro-glow discharge 306–308
 micro-hollow-cathode discharge 306–308
microelectronics, remote plasma cleaning 441–442
micro-etching 420–421
micro-fabrication 420–421
microfilament 569, 644, 683, 684
micro-hollow-cathode discharge 306–308
micro hollow-cathode glow discharges (micro-HCD) 308
micro-organism deactivation 598
micropatterning 420
microplasma array 308, 309
microplasma micro-patterning 420
MicroPlaSter 675, 676, 687
microscale differential wettability patterning 421
microsecond-pulsed FE-DBD 644
microtubules 569
microwave absorption 252, 275
microwave discharges 7
 contracted 300
 of moderate pressures 300–302
 waveguide 251
microwave micro-plasma source 310
microwave plasma 250, 275
 decomposition 402
 generation 251–252
miniaturized pin-to-hole discharge 698–699
minimum effective dose 659
minimum power principle 204–206, 213, 230, 289, 295
mist droplet size distribution 623–624, 636
mist particles condensation 623–624
mist particles evaporation 623–624
mist particulates explosion 623–624
mitochondrion 570
moderate-current electron beam 321
modified Meek's criterion 339, 342
modulation instability 145–146, 195, 324
molecular excitation energy 64, 69
molecular nitrogen dissociation 388
molybdenum plasma metallurgy 393
momentum conservation equation 73, 164
monatomic gases 190–192, 195, 196, 232
monochromatic photoionization 311–313, 329
multidisciplinarity without borders 9–10
multiple plasma temperatures 5–6
multi-step leader 304
multi-wall carbon nanotubes 428
- n**
N-acetylcysteine (NAC) 577, 646, 708
nano-composite particles 425
nanosecond pulsed DBD 285, 470, 484, 644, 645, 655–656, 718
nanosecond-pulsed dielectric-barrier discharges (DBD) 284–287
nanosecond-pulsed discharge 287, 339–342
nano-second pulsed discharge structure 335
nanosecond-pulsed FE-DBD 644, 645, 713
nano-second pulse power supplies 281
nanotubes, synthesis of 427–429

- nanotube surface modification 427–429
- natural blood coagulation 683, 685, 686
- natural gas conversion 526, 542
- natural-soft coagulation regime 685
- natural spectral line width 125
- Navier–Stokes equation 151–153
- necrosis 577, 593–594, 660, 663, 668, 672, 707–709
- necrotic tissues, treatment of 672
- negative corona 278, 280, 281, 334, 380, 381
- negative effect of hydrocarbons 378
- negative glow 199, 206, 207, 216, 217, 307
- negative ion formation 17, 28, 29, 423
- negative ions 17
 - electron detachment from 32–33
 - formation of 31–32
- negative-index metamaterials 496, 503
- negative temperature effect 627, 628
- nerve, of tooth 691
- neutral particles, electrostatic trapping of 424
- Newton's law 137
- NF₃ synthesis 383
- niobium oxide Nb₂O₅ 397
- nitric oxide effects 670–671
- nitrogen and sulfur oxides 507
- nitrogen compounds 385, 464–466, 532–534, 553, 612, 620, 629, 636
- nitrogen-containing compounds 466, 535, 669
- nitrogen-containing groups 553
- nitrogen dioxide NO₂ radical 575, 576
- nitrogen fixation 13, 367, 668
- nitrogen-organic compounds 531
- nitrogen oxides (NO_x) 367–389, 463, 487, 507, 508, 516, 579, 601, 620, 670
- nitrosylation 576, 629–631, 647
- nitrous oxide destruction 387
- noncatalytic surface 40
- nonchemical plasma removal 517
- non-conformal deposition 446–447, 452, 453
- non-DC discharges 197
- nonequilibrium 7
 - “cold” gliding arcs 242
 - effects 120
 - gliding arc 239–241
- nonequilibrium atmospheric pressure plasma (NEAPP) 616, 617
- nonequilibrium nanosecond-pulsed plasma
 - liquid without bubbles 338–339
 - water and PDMS 334–336
 - water without bubbles 333–334
- nonequilibrium phase 237, 240
- nonequilibrium plasmas 5
 - chemistry 530–531
 - effect 394–396
 - energy efficiency 345
 - sterilization of bacteria 598
- nonequilibrium reactions, controllability of 10
- nonequilibrium surface heating 395, 410
- nonhealing wound 665
- nonideal solution, PAW 635
- nonlinear flux component 91
- nonlinear ionic sound 148–150
- nonlinear non-transferred wall-stabilized arc 236
- nonoxidative disinfection processes 629–631
- nonoxidative plasma sterilization effect 629
- nonresonant charge exchange 39, 40, 42
- nonresonant charge transfer 38–40
- nonresonant rotational excitation 46
- nonresonant VV-exchange 91–93, 95, 120, 193
- non-self-sustained discharges 197, 325, 326, 354, 385
- nonspecific lipid peroxidation 584
- nonthermal air plasma 39, 506
- nonthermal atmospheric-pressure plasma 378, 592–593, 649, 680–682
- nonthermal discharges, propagation of 187–189
- nonthermal gliding arc 297–310, 387
- nonthermal ignition mechanism 481
- nonthermal (nonequilibrium) discharges 197
- nonthermal plasma 5, 587
 - cell division processes 573
 - cell membrane 571–573
 - cells and primary cell components 568–571
 - cell signaling systems 576
 - cellular metabolism 573–574
 - direct and indirect treatments 583
 - direct vs. indirect plasma effects 578–580
 - EEDF 74–75
 - energetic UV radiation 581
 - plasma-generated charged species 580–581
 - plasma-induced intracellular ROS 582
 - RNS 575–578
 - ROS 574–575
 - sterilization of air streams 597–599, 605
 - sterilization of spores and viruses 590–592
 - thermodynamic equilibrium 567
- nonthermal reactive plasmas 164–167
- nonthermal RF discharge 254, 255, 425, 552
- nontransparent or optically thick 123
- normal glow discharge 201, 204, 206, 307
- NO stabilization 373
- NO synthesis
 - charged particles to 369
 - critical ionization degree for 373
 - electronic excitation contribution to 369

NO synthesis (*contd.*)

- in thermal air plasmas 369
- Zeldovich reaction of 369–372
- NO-therapy 671–675, 691, 696
- nuclear fission fragments 326–328, 330, 356
- nuclear magnetic resonance 647
- nucleus, nonthermal plasma 569
- N₂ vibrational energy balance 372

O

- obstructed arcs 234
- obstructed glow discharge 206–207
- ohmic heating 501
- Ohm's law 138, 151, 153–154, 200, 209, 212, 237, 239, 240, 259, 268, 288, 289
- onco-immunotherapy 712–713, 715
- ondulator sources 500
- one-atmosphere uniform glow discharge plasma (OAUGDP) 292
- one-step dissociation 403
- one-temperature approximation 359, 365
- onychomycosis 687
- ophthalmology treatment 675, 696
- optical breakdown 253, 303, 304
- optical coordinate 123
- optical emission spectroscopy 337–338, 593, 615
- optical thickness, plasma of 123
- ordinary wave 157
- organic chlorine industrial wastes 534
- organic hydroperoxides 574
- organic load effect 628–631
- organic nitrogen compounds 532–534
- organic peroxides 548, 584, 647
- organic plasma chemistry
 - of chlorine compounds 534–535
 - of fluorine compounds 535–536
- oscillator power 125, 129
- Osipov–Folmanis plasma polymerization model 546
- osmosis 518, 556, 571, 585
- osmotic pressure 571, 585, 590, 594
- overcoming immune suppression 712–713
- overvoltage effect 284, 285
- oxidation process mechanism 508
- oxidative water activation 627, 628
- oxygen fluorides 383
- ozonation 599
- ozone generation 374, 375
 - in air 376–377
 - in oxygen 375–376
 - in pulsed corona discharges 379–381

P

- packed-bed corona 290, 291
- paracrine signaling 656, 657
- parallel plate electrodes 216
- Parker formula 62, 69
- Park model 68
- partial oxidation of coal 466
- partition function 114–116
- Paschen curves 176–178, 203, 206, 307, 331, 338, 496
- passive plasma cleaning 441
- passive transport 571
- pathogen detection and remediation facility (PDRF) 595, 596
- PDMS 334–336, 340
- Peek formula 278
- Penning discharge 214–216, 218
- Penning ionization 25–26, 33, 240
- Penning mechanism 224, 243
- Penning plasma lasers 499
- perfluoro-compounds (PFCs) 440
- perfluorooctanesulfonic acid (PFOS) 518–519
- perfluorooctanoic acid (PFOA) 518–520
- peroxynitrite ONOO⁻ 575, 576, 618, 627
- peroxy-radicals 574, 576
- pest control 609
- phagocytic cells 707, 708
- phase space 71
- phase transitions 318

in medical market 679
nitric oxide generation 668–669
pin-to-hole (PHD) microdischarge 675–676
of pyoinflammatory diseases 673
skin damage and 665
in ulcerations 679
wound infection/colonization 666
wound tissues 669–671, 673, 695
wound treatment 669–670, 676, 679, 680, 685–686

X

xenon fluorides synthesis 382

Z

zebra ignition 482
Zeldovich mechanism 346, 368, 369, 372, 534, 668
Zeldovich reaction 369–373
zero kinetic order 464
zigzag orientation 427
