 Kumada cross-coupling reaction 566

l

1-butyl-*l*-(*o*-iodobenzyl)-3-phenylurea 574
 leaving group 50, 54
 Le Chatelier's principle 67
 Lewis acid–base theory 30–31
 Lewis acid catalysts 1
 Lewis acids 14, 193
 lithium diisopropylamide (LDA) 233
 Luche reduction 209

m

macrocyclic lactones 551
 magnesium alkyl hydroperoxides 217
 malonic ester 248
 malonic ester synthesis 247
 Markovnikov's rule 138
m-chloroperbenzoic acid 27, 153, 418
 Meerwein, Hans 392
 Meerwein–Ponndorf–Verley Reduction 209–210
 Meisenheimer complex 358
 menthyl chloride 111
meso compounds 101, 102
 mesomeric effect 18
 α,β -unsaturated carbonyl compounds 20
 aromatic compounds 23
 carbonate anion 19
 1,2-dibromobenzene 19
 and inductive effect 20
 oxygen atom 22
 phenol 21
 1,7-methano[12]annulene 307–308
 1-methoxybutadiene 524, 525
 methyl bromide 251
 2-methylbutadiene 118
 methylcyclohexane 107
 2-methylcyclohexanone 242, 243
 1-methylcyclohexene 110
 2-methyl-1,1-diphenyl-propane-1,2-diol 394
 5-methylenebicyclo[2.2.1]hept-2-ene 157
 3-methylpyrrolidine 118
 2-methylpyrrolidine 117
 methyl trimethylacetate 272
 1,2-migration 426
 Mizoroki–Heck coupling reaction 539
 amines 541
 catalytic cycle 541
 catalytic insertion reaction 540
 palladium acetate and silver carbonate 545
 phosphine ligands 541
 regioselectivity of 542–546
m-nitroaniline 351
 Möbius aromaticity 293–294
 moderately activating substituents 343
 moderately deactivating substituents 344
 molecular orbital (MO) 53, 296, 503
 molecular rearrangement 78
 Molozonide 163
 monoalkylborane compounds 151
 monobromination 237, 240
 monobromoacetone 237
 monobromophenol 347
 monoepoxide 157
 monohalocarbenes 437, 475

monohalocyclopropanes 511
 monosubstituted cyclohexanes 108
 monosubstituted malonic ester 248
 Mozingo reduction 194

n

Nametkin rearrangement 406
 naphthalene 365–367, 444
 naphthalene endoperoxide 491
N-bromosuccinimide (NBS) 474
N-chloraminocyclopropanol derivatives 416
 Neber reaction 415
 Neber rearrangement 415
 Negishi-coupling reaction 558
 iodoalkanes 560
 Nickel-catalyzed cycle 561
 organozinc reagents 561
 Palladium-catalyzed cycle 560
 polyfunctional alkyl iodides 559
 unsymmetrical biaryls and diarylmethanes 558
 neighboring groups 75–78
 neomenthyl chloride 111
N-heterocyclic carbenes (NHCs) 557
 nitration 336–337
 nitrenes
 acyl azides 455
 Curtius rearrangement 455–456
 cycloaddition reactions 458
 Hofmann rearrangement 458
 insertion reactions 460
 Lossen rearrangement 457–458
 synthesis 454
 rearrangements 455
 Schmidt rearrangement 457
 nitriles 216
 nitrogenous compounds 11
 3-nitropyridine 325
N,N-dimethylnemontylamines 123
N-nitropyridinium nitrate 325
N-Nitrosoalkyl Urea Compounds 433
 nonaromatic 287
 nonclassical carbocations 384
 nonnucleophilic lithium tetramethylpiperidide
 (LTMP) 330
 norbornane system 231
 norbornyl cation 405
 2-norbornyl cation 404
 nucleophiles 389
 nucleophilic aromatic substitution 326
 addition-elimination mechanism 358–360
 arenediazonium salts 360–363
 elimination-addition mechanism 363–365
 nucleophilic compounds 15

nucleophilic rearrangement 392, 424
 nucleophilic substitution reaction 50, 328, 330
 in allylic systems 71–73
 ambident nucleophiles 78–80, 249
 and basicity 51–53
 epoxides 82
 internal nucleophilic substitution reaction 74–75
 neighboring group participation 75–78
 S_N1 reaction
 optical activity 59–61
 stereochemistry in 58–59
 steric factors 61–62
 S_N2 reaction
 factors 66–71
 stereochemistry of 64–66
 unsaturated systems 83
 Williamson ether synthesis 80–81
 nucleus-independent chemical shift (NICS) 291
 nylon-6 414

o

O-alkylation 250
 octalene 312
 oppenauer oxidation 209
 optically inactive compounds 60
 orbital symmetry conservation 512
 organic field-effect transistors (OFETs) 565
 organoborane reagents 554
 organomagnesium halides 210
 organotin compounds 550–552
 osmium tetroxide (OsO₄) 160
 overlapping orbitals 2
 oxaphosphetane 220
 oxepine 330
 oxidation number 25
 Baeyer–Villiger oxidation 27
 bonding electrons 25
 carbon atom 26
 carbon–carbon bonds 27
 cyclization reactions 28
 oxidative workup 164
 oximes 199, 413
 oxirene 314
 oxymercuration–demercuration to 3,3-dimethyl-but-1-ene
 146
 oxymercuration reaction 147, 148
 ozonolysis 162

p

palladium-catalyzed carbonylation reactions
 aryl halides 574
 Mo(CO)₆-mediated carbonylation 577–578
 organometallic reagents 576–577

- paramagnetic ring current 290
 partial racemization 58
p-bromobenzenesulfonate 400
p-chlorotoluene 352
 2,4-pentadione 230
 pentalene 311
 pericyclic reactions 500
 characteristic features 500
 cheletropic reactions 501
 cycloaddition reactions 500
 electrocyclic reactions 500, 505
 frontier molecular orbitals 502–505
 sigmatropic reaction 501
 Woodward–Hoffmann rules 501–502
 Perkin condensation 264–265
 Peterson olefination 227
 phenanthrene 368
 3-phenyl-2-butanone 237
 phenylhydrazine 198
 4-phenyl-1,2,4-triazoline-3,5-dione (PTAD) 486
 phosphonium ylides 219
 phosphorescence 490
 photochemical electrocyclic reactions 506
 pinacolone 393
 pinacol rearrangement 393
 polarized bonds 31
 polarizer 60
 polar reactions 50
 polycyclic aromatic compounds
 benzenoid aromatic compounds 368–373
 coronene 370
 fullerene 372
 graphite 370–371
 naphthalene 365–367
 potassium *t*-butoxide 97
 precalciferol 529
 primary ozonide (molozone) 163
 protecting group 192
 protection of diols 193
 proton elimination 389
 pyrazine 329, 330
 pyrene 369
 pyridazine 329, 330
 pyridine 323
 Pyridine Enhanced Precatalyst, Preparation, Stabilization and
 Inhibition catalyst 558
 pyridine *N*-oxides 327
 pyridine-sulfur trioxide complex 319
 pyrimidine 329, 330
 pyrolytic elimination 119
 pyrolytic elimination
 Chugaev elimination 121–123
 ester pyrolysis 120–121
 pyrrole 316–318
 pyrrolidine 243
 3-pyrrolidinethiophene 332
- r**
- radical-pair mechanism 426
 radical polymerization 478
 radical reactions 50
 radicals 12
 addition to alkenes 478
 antibonding orbital 469
 atom-abstraction reaction 472–475
 benzylic systems 470
 Birch reduction 481–483
 carbocations 469
 C–H bond dissociation energies 469
 di- π -methane rearrangement
 483–485
 diradicals 486–487
 ESR spectroscopy 468
 generation 471
 Kolbe electrolysis 476–477
 manganese radical 480–481
 planar and pyramidal structures 468
 radical addition to alkenes 478–480
 radical combination 475–476
 radical disproportionation 476
 singlet oxygen 487–496
 structure and stability 468
 Ramberg–Bäcklund reaction 411
 reaction kinetics 41
 reaction rate 44, 76
 reductive deamination 360
 reductive dediazonation 360
 reductive workup 163
 ring expansion 450
 ring inversion 105
 ring opening process 511
 Robinson annulation 256–257
- s**
- Schiff base 196
 Schiff base formation 196
 Schlenk equilibrium 211
 secondary amines 197
 semibenzylic rearrangement 408, 409
 semicarbazide 198
 semipinacol rearrangement 396
 sesquifulvalene 314
 Shapiro reaction 433
 Sharpless asymmetric epoxidation 156
 Sharpless asymmetric oxidation 155
 Sharpless oxidation 155

- sigmatropic reactions 501, 526
 antarafacial shift 526
 calciferol 529
 configuration isomerization 527
 cycloheptatriene 529
 precalciferol 529
 suprafacial shift 526
 thermal 1,3-hydrogen shift 527
 Woodward–Hoffmann rules 530
 Simmons–Smith Reaction 437–438
 singlet oxygen
 chemical sources 490–492
 [2+2] cycloaddition reactions 493–495
 [4+2] cycloaddition reactions 495, 496
 electronic configuration 487–489
 ene reaction 492–493
 photosensitized singlet oxygen 489, 490
 single transition state 42
 singly occupied molecular orbital (SOMO)
 469
 sitagliptin 155
 sodium ethoxide 110
 solvent effect 68
 solvolysis 269
 Sommelet–Hauser rearrangement 427–428
 Sonogashira-coupling reaction 562
 acetylenes and organic halides 562
 4-bromo-2,3,5-trichloro-6-iodopyridine 563
 conjugated acetylenic compounds 562
 copper-free Sonogashira coupling 564, 565
 organic field-effect transistors (OFETs) 565
 Palladium-copper-catalyzed cycle 564
 sp²-hybridization 184
 spirodienone systems 398
 stable ylides 220
 staggered conformation 99
 stereochemistry 214
 Stevens rearrangement 425–427
 Stieglitz rearrangement 416
 Stille cross-coupling reaction 547
 organotin compounds 550–552
 palladium catalyst 548
 sp²-hybridized organohalides 548
 Stobbe condensation 265
 Stork enamine reaction 243
 Straus coupling 537
 strongly activating substituents 342
 substituted anilines 39
 substitution mechanism 271
 sulfonation 337–338
 sulfur ylides 224
 suprafacial bond formation 517
 suprafacial shift 526
 Suzuki–Miyaura coupling reaction 552
 advantages of 554
 aryl boronic acids and aryl bromide 552
 biaryl derivatives 557
 boronate pathway and oxo–palladium pathway 554
 catalytic cycle 553
 E-1-hexenylborane and *trans*-styryl bromide 553
 N-heterocyclic carbenes (NHCs) 557
 nickel complexes 555
 organoborane reagents 554
 Pd-PEPPSI catalysts 558
 ribisin A 556
 transmetalation reaction 554
syn-elimination 112
syn-periplanar conformation 103, 120
