Preface *xi*

1	Introduction for Aqueous Zinc-Ion Batteries	1
1.1	History of Aqueous Zinc-Ion Batteries	1
1.2	Main Challenges for Aqueous Zinc-Ion Batteries	2
1.2.1	Cathode	2
1.2.2	Anode	3
1.2.3	Separator	4
1.2.4	Electrolyte	5
1.2.5	Full Battery Assembly and Practical Application	6
	References	6
2	Theoretical Fundamentals of Aqueous Zinc-Ion Batteries	9
2.1	Electrochemical Reaction Mechanism of Cathodes	9
2.1.1	Zn ²⁺ -Insertion/Extraction Mechanism	9
2.1.2	Co-Insertion/Extraction Mechanism	11
2.1.2.1	H ⁺ and Zn ²⁺ Insertion/Extraction Mechanism	11
2.1.2.2	Zn ²⁺ /H ₂ O Co-Insertion/Extraction Mechanism	12
2.1.2.3	Li ⁺ - and Zn ²⁺ -Insertion/Extraction Mechanism	13
2.1.3	Chemical Conversion of Cathodes	13
2.2	The Mechanism of Zinc Metal Anode	20
2.2.1	Fundamentals of Thermodynamics	20
2.2.2	Crystal Nucleation and Growth of Zinc Electrodeposition	21
2.2.2.1	Nucleation	21
2.2.2.2	Crystal Growth of Zinc on Existing Crystal Facets/Nuclei	27
	References	29
3	Cathode Materials for Aqueous Zinc-ion Batteries	33
3.1	Manganese-Based Cathode Materials	33
3.1.1	Introduction to Different Mn-Based Materials	33
3.1.1.1	Tunnel-Type Structure	33
3.1.1.2	Layered (δ -) MnO ₂	39
3.1.1.3	Spinel (λ -) MnO ₂	40

3.1.1.4	Other Manganese Oxides	42
3.1.2	Issues	44
3.1.2.1	Mn ²⁺ Dissolution	44
3.1.2.2	Structure Instability	44
3.1.2.3	Poor Electrical Conductivity	45
3.1.3	Strategies	46
3.1.3.1	Structure Design	46
3.1.3.2	Compositing with Conductive Materials	49
3.1.3.3	Pre-Intercalation	52
3.1.3.4	Defect Engineering	57
3.1.3.5	Electrochemical Activation	60
3.2	Vanadium-Based Cathode Materials	61
3.2.1	Introduction to Different Vanadium-Based Materials	61
3.2.1.1	Layered Structure	62
3.2.1.2	Tunnel-Based Structure	67
3.2.1.3	Spinel-Type Structures	70
3.2.1.4	NASICON-Type Structure	70
3.2.1.5	Rock Salt-Type Structures	72
3.2.2	Issues	74
3.2.2.1	Effect of Electrostatic Interactions	74
3.2.2.2	Vanadium Dissolution	74
3.2.3	Modified Strategy	75
3.2.3.1	Defect Engineering	75
3.2.3.2	Interlayer Intercalation	78
3.2.3.3	Morphology Optimization	84
3.2.3.4	Composite Material	85
3.2.3.5	Electrochemical Activation	88
3.3	Prussian Blue Analogs	90
3.3.1	Introduction to Prussian Blue Analogs	90
3.3.1.1	Structure and Categorization	90
3.3.1.2	Synthesis Method	90
3.3.2	Strategies	91
3.4	Organic Materials	94
3.4.1	Different Types of Organic Cathodes	94
3.4.1.1	n-Type	94
3.4.1.2	p-Type	96
3.4.1.3	Bipolar-Type	99
3.4.2	Main Challenges Faced by Organic Cathode Materials	100
3.4.2.1	Poor Electrical Conductivity	100
3.4.2.2	Low Energy Density	102
3.4.2.3	Poor Cycling Stability	102
3.4.3	Design Strategies for Advanced Organic Cathode Materials	102
3.4.3.1	Enhancing Electrical Conductivity	102

3.4.3.2	Increasing Energy Density	103
3.4.3.3	Improving Cycling Stability	104
	References	106
4	Anode Materials for Aqueous Zinc-Ion Batteries	117
4.1	Structural Design	118
4.1.1	3D Zinc Anodes	118
4.1.2	Zinc Alloy Anodes	120
4.1.3	Zinc-Plated Hierarchical Anodes	121
4.1.3.1	3D Carbon-Based Hosts	121
4.1.3.2	3D Metallic Host	124
4.1.3.3	MOF-Based Host	124
4.2	Surface Modifications	125
4.2.1	Zinc–Electrolyte Interface	128
4.2.1.1	Design of High-Performance Surface	128
4.2.1.2	Electrochemical Protocol to Uniformize Surface	129
4.2.1.3	Physically and Chemically Polished Surface	131
4.2.1.4	The Textured Surface	132
4.2.1.5	The Plasma-Treated Surface	132
4.2.1.6	Introduction of Interface Layer	133
4.2.1.7	Insulating Layer	133
4.2.1.8	Electron-Oriented Layer	136
4.2.1.9	Ion-Oriented Layer	137
4.2.1.10	Complex Layer	138
4.2.2	Host–Zinc Interface	141
4.2.2.1	Using Uniform Conductive Host	141
4.2.2.2	Building Zincophilic Sites	142
4.2.2.3	Introducing Hydrogen Evolution Barrier Layer	144
4.2.2.4	Regulating Interface Orientation	145
	References	147
5	Electrolytes for Aqueous Zinc-Ion Batteries	153
5.1	Development of Electrolytes for Aqueous Zinc-Ion Batteries	153
5.1.1	Functional Electrolyte Additives	155
5.1.2	High-Concentration Electrolyte (Water in Salt)	158
5.1.3	Hydrogel Electrolyte	160
5.1.4	Ionic Liquids	163
5.1.5	Deep Eutectic Solvents	164
5.2	Issues and Solutions of Electrolytes for Aqueous Zinc-Ion Batteries	166
5.2.1	Cathode Dissolution	167
5.2.2	Water Decomposition	171
5.2.3	Corrosion and Passivation	174
5.2.4	Dendrite Growth	178

- 5.2.5 Interaction Among HER, Corrosion, and Dendrite Growth 184
- References 185

6 Separators for Aqueous Zinc-Ion Batteries 191

- 6.1 Performance Requirements and Properties of Separator 191
 - 6.1.1 Performance Requirements of Separator 191
 - 6.1.1.1 Chemical and Electrochemical Stability 191
 - 6.1.1.2 Wettability, Electrolyte Uptake, and Electrolyte Retention 192
 - 6.1.1.3 Mechanical Strength 192
 - 6.1.2 Properties Requirements of Separator 192
 - 6.1.2.1 Pore Size 192
 - 6.1.2.2 Pore Distribution 193
 - 6.1.2.3 Porosity 193
 - 6.1.2.4 Thickness 193
 - 6.2 Commercial Separators 194
 - 6.2.1 Polyolefin Separator 194
 - 6.2.2 Glass Fiber Separator 194
 - 6.2.3 Cellulose-Based Separator 195
 - 6.2.4 Nafion Separator 196
 - 6.3 Constructing High-Performance Separators 196
 - 6.3.1 Promoting Homogeneous Ion Distribution 196
 - 6.3.1.1 Constructing Ordered Pore Structure 197
 - 6.3.1.2 Introducing Conductive Layer 203
 - 6.3.2 Accelerating Zn^{2+} Transport 207
 - 6.3.2.1 Zincophilicity 207
 - 6.3.2.2 Electrostatic Interaction 211
 - 6.3.2.3 Maxwell–Wagner Polarization 212
 - 6.3.3 Manipulating Zn Growth Direction 213
 - 6.3.3.1 Manipulating Crystallographic Orientation 213
 - 6.3.3.2 Manipulating Lateral Growth 216
 - 6.4 Separator-Free AZIBs 218
 - 6.4.1 Gel Electrolyte 218
 - 6.4.2 Solid Electrolyte 219
 - References 222

7 Development of Full Zinc-Ion Batteries 227

- 7.1 Types of AZIBs 227
 - 7.1.1 Initial Test Molds 227
 - 7.1.2 Coin Cell 228
 - 7.1.3 Soft-Packed Cell 229
 - 7.1.4 Cylinder Cell 230
 - 7.1.5 Prismatic Cell 231
- 7.2 Performance Parameters of AZIB 231
 - 7.2.1 Electromotive Force (EMF) 231
 - 7.2.2 Battery Internal Resistance (R_i) 232

7.2.3	Open-Circuit Voltage (V_{OC}) and Working Voltage (V)	232
7.2.4	Capacity (C) and Theoretical Capacity (C_0)	232
7.2.5	Depth of Discharge (DOD)	233
7.2.6	Energy Density	234
7.2.7	Power Density	234
7.3	Assembly Process of Full Battery	235
7.3.1	Cathode Flake	235
7.3.1.1	Coating	235
7.3.1.2	Rolling	235
7.3.1.3	In Situ Synthesis	237
7.3.1.4	Slurry Method	238
7.3.2	Anode Flake	238
7.3.2.1	Zinc Powder	238
7.3.2.2	Zinc Plate	240
7.3.2.3	Galvanized Material	241
7.3.2.4	Zinc Alloy	241
7.3.2.5	3D Zinc Anode	242
7.3.3	Electrolyte	242
7.3.3.1	Aqueous Electrolyte	242
7.3.3.2	Gel Electrolyte	244
7.3.4	Assembly Process of Full Battery	245
7.3.4.1	Coin Cell	245
7.3.4.2	Soft-Packed Cell	245
7.4	Aqueous Zinc-Ion Battery Manufacturers	247
7.5	Summary and Outlook	251
	References	252

8 Advanced Characterization Tools and Theoretical Research Methods 255

8.1	Characterization Techniques	257
8.1.1	Apparent and Morphological Observations	257
8.1.1.1	Electron Microscope (EM)	257
8.1.1.2	Laser Scanning Confocal Microscope (LSCM)	267
8.1.1.3	Other Apparent and Morphological Techniques	269
8.1.2	Structural and Spectroscopic Techniques	271
8.1.2.1	X-Ray Diffraction	271
8.1.2.2	Raman Spectroscopy	272
8.1.2.3	Infrared (IR) Spectroscopy	275
8.1.2.4	X-Ray Photoelectron Spectroscopy (XPS)	276
8.1.2.5	Nuclear Magnetic Resonance (NMR) Spectroscopy	280
8.1.2.6	X-Ray Absorption Spectroscopy	282
8.1.2.7	Other Structural and Spectroscopic Techniques	284
8.2	In Situ Characterization Techniques	286
8.2.1	In Situ FTIR	286
8.2.2	In Situ XRD	287

8.2.3	In Situ Raman	288
8.2.4	In Situ AFM	288
8.2.5	In Situ Optical Microscopy (OM)	291
8.3	Theoretical Research Methods	292
8.3.1	Simulations in AZIBs	292
8.3.1.1	Simulations of Electric Field Distribution	292
8.3.1.2	Simulations of Zn ²⁺ Concentration Field Distribution	293
8.3.2	Theoretical Calculation in AZIBs	295
8.3.2.1	Calculations of Adsorption Energy for Evaluating Zincophilicity	295
8.3.2.2	Calculations for Structural Evolution With Zn ²⁺ Insertion/Extraction	297
8.3.2.3	Calculations of Zn ²⁺ Diffusion Kinetics	297
8.4	Conclusion	299
	References	301

9 Conclusion and Future Perspectives 305
