

## Index

### **a**

absolute Peltier coefficient 6  
 absolute Seebeck coefficient 5  
 acceptor-acceptor (A-A) copolymer 95, 107  
 acceptor-acceptor type homopolymers 96  
 acid-base doping 200  
 acousto-optical modulators (AOM) 340  
 Alkyl silanes 204  
 Anderson charge localization 22  
 anisotropic etching 343  
 anisotropy 323  
 Arrhenius formula 25  
 artificial intelligence (AI)-assisted molecular design 82  
 artificial organic i-TE materials 189  
 atomic force microscopy (AFM) 286, 288, 358  
 atomic layer deposition (ALD) 343  
 Au-molecule-Au junctions 275  
 average resistivity 324

### **b**

bandpass energy 356  
 BDPPV (benzodifurandione-phenylenevinylene) derivatives 91  
 1,4-benzenedithiol (BDA) 302

benzene-1,4-dithiolate (BDT) molecule 285  
 $\beta$ -naphthalenesulfonic acid 55  
 bis(trifluoromethylsulfonyl)imide (BTFMSI) 65  
 Bismuth telluride (Bi<sub>2</sub>Te<sub>3</sub>) 134–136  
 6,13-bis(triisopropylsilylethynyl)pentacene (TIPS-PENT) 24  
 Bi<sub>2</sub>Te<sub>3</sub> nanoparticle arrays 154  
 bi-thermoelectric material 305  
 B←N bridged bipyridine (BNBP) 96  
 Boltzmann constant 277  
 Boltzmann equation 38  
 Boltzmann theory 20, 213  
 Boltzmann transport equation 36  
 theory 26–29  
 boron fluoride diethyl etherate (BFEE) 55

Bose-Einstein distributions 279  
 Bose-Einstein statistics 34

### **c**

calorimetric scanning thermal microscopy (C-SThM) 286–288, 310  
 camphorsulfonic acid (CSA) 53  
 carbon-carbon bond 72  
 carbon nanotubes (CNTs) 138, 139, 142, 180

- carbon quantum dots (CQDs) 127
  - Carnot cycle efficiency 12
  - Carnot efficiency 279
  - carrier concentration 101, 346–347

  - secondary electron cut-off (SECO) 352
  - second thermoelectric effect 6
  - Seebeck coefficient 4, 29, 123, 124, 161, 165, 167–169, 172, 180, 184, 185, 187, 195, 240, 249, 256, 275–279, 282, 283, 293, 295, 300, 302
    - contribution 186
    - measurement 275, 324
  - Seebeck voltage measurement 327, 328–330
    - temperature difference creation 324, 325
    - temperature difference measurement 324
      - infrared method 326–327
      - thermal resistance 326
      - thermocouple 325–326
  - Seebeck effect 2, 237, 238, 258, 266
  - Seebeck voltage measurement, error analysis 329–330
  - self-assembled monolayer (SAM)-organic semiconductor interface 204
  - self-assembled monolayers (SAMs) 288
  - self-assembled supramolecular (SAS) 54
  - self-doped molecules 225
  - self-doping 225
  - self-powered dual-parameter 270
  - self-powered sensors 268
  - side-chain engineering 79
  - simultaneous measurement 343
    - measurement chip 343–344
    - TE parameters 344–346
  - single molecule thermoelectric (SM-TE) devices 275–276
  - single naphthalenediimide (NDI) junctions 281
  - single point method 328
  - single-walled carbon nanotubes (SWCNTs) 132
  - singly occupied molecular orbital (SOMO) 44
  - sodium-ion batteries 172
  - solid and quasi-solid materials 172, 174, 175
  - Solid and quasi-solid state electrolyte 172
  - solid polyelectrolytes 172
  - solid/quasisolid conductors 169
  - solution-processable organometallic complexes 113
  - Soret effect 162, 186, 187
  - source-drain (S-D) electrodes 347
  - sp<sup>2</sup> hybridization 20
  - spin caloritronics 294
  - spin-coating 243
  - spin-polarized STM (SP-STM) 294
  - spin thermoelectric device 16
  - steady-state methods 330
  - Stefan-Boltzmann constant 346
  - stretchable electronic devices 255
  - supercapacitors 172
  - superlattice-like molecular assemblies 15
- t**
- temperature coefficient of resistance (TCR) 335
  - temperature dependent resistance 326
  - temperature dependent  $\sigma_E$  (E) 27
  - temperature difference ( $\Delta T$ ) 324
  - Te nanowires 131
  - tetracyanoquinodimethane (TCNQ) 206
  - 2,3,5,6-tetrafluoro-7,7,8,8-tetracyanoquinodimethane (F4TCNQ) 199

- tetrafluoro-tetracyanoquinodimethane (F4TCNQ) doped quaterthiophene 357
- tetrakis(dimethylamino)ethylene (TDAE) 65
- tetrathiofulvalene-tetracyanoquinodimethane (TTF-TCNQ) 239
- theoretical progress, in OTE materials 37, 38
- TE conversion in, polymer 40, 42, 44
- TE conversion in, small molecules 38–39
- thermal conductance ( $\kappa t$ ) 346
- thermal conductivity 9, 32, 123, 169, 330, 331, 345
- bulk materials
- absolute and comparative techniques 331–332
  - pulsed power technique 332
  - TPS method 333–334
- thin film materials
- laser flash method 342–343
  - TDTR technique 340–341
  - $3\omega$  method 334–340
- thermal deposition methods 320
- thermal diffusion coefficient 334, 337
- thermal electromotive force (EMF) coefficient 5
- thermal energy 239
- thermal equilibrium 33
- thermal excitation frequency ( $2\omega$ ) 336
- thermal penetration depth ( $\lambda$ ) 336
- thermal resistance method 326
- thermal transport 32–33
- electronic thermal conductivity 33
  - lattice thermal conductivity 33–37
- thermodynamic equilibrium 353
