

## Contents

**Preface** *xiii*

<b>1</b>	<b>Synthesis of Hairy Nanoparticles</b>	<b>1</b>
	<i>Zongyu Wang, Jiajun Yan, Michael R. Bockstaller, and Krzysztof Matyjaszewski</i>	
1.1	Introduction to Grafting Chemistry	1
1.2	Surface Functionalization of Nanoparticles	2
1.2.1	Surface Modification by Chemical Treatment	2
1.2.2	Surface Modification by Plasma Treatment	8
1.2.3	Synthesis of Functionalized Nanoparticles Through Initiator-Containing Precursors	8
1.3	Synthesis of Hairy Nanoparticles	9
1.3.1	Surface-Initiated Polymerization/The “Grafting-from” Approach	9
1.3.1.1	SI-Free Radical Polymerization	10
1.3.1.2	SI-ATRP	10
1.3.1.3	SI-RAFT	17
1.3.1.4	Other Polymerization Techniques	19
1.3.2	The “Grafting-onto” Approach	21
1.3.2.1	Conventional “Grafting-onto” Approach	21
1.3.2.2	Ligand Exchange	23
1.3.3	Template Synthesis	24
1.3.3.1	Block Copolymer and Its Derivative Templates	24
1.3.3.2	Star/Bottlebrush Polymer Templates	25
1.4	The Role of “Architecture” in Hairy Nanoparticles	25
1.4.1	Conformation of Hairy Nanoparticles	26
1.4.2	Bimodal Hairy Nanoparticles	31
1.5	Conclusion	32
	Acknowledgment	34
	References	34

<b>2</b>	<b>Hairy Nanoparticles via Self-assembled Linear Block Copolymers</b>	<b>49</b>
	<i>Zhen Zhang, Yi Shi, and Yongming Chen</i>	
2.1	Introduction	49
2.2	Hairy NPs via Bulk Microphase Separation of Block Copolymers	50
2.2.1	Bulk Microphase Separation of Diblock Copolymers	50
2.2.1.1	Theoretical Research	51
2.2.1.2	Experimental Study	52
2.2.1.3	Effect Factors	53
2.2.2	Bulk Microphase Separation of Triblock Copolymers	54
2.2.3	Preparation of Hairy NPs with Different Shapes	55
2.2.3.1	Diblock Copolymers with PTEPM or PGMA Components	56
2.2.3.2	Diblock Copolymers Containing PS	56
2.2.3.3	Triblock Copolymer System with PS Components	59
2.3	Hairy NPs via the Self-assembly of Block Copolymer in Solution	61
2.3.1	Morphology of Block Copolymers Assembly	62
2.3.1.1	Spherical Micelles	62
2.3.1.2	Rod-Like Micelles	63
2.3.1.3	Bilayer Structure	63
2.3.1.4	New Morphologies	64
2.3.2	Preparation of Hairy Copolymer NPs	65
2.3.3	Major Factors Influencing the Morphology of Hairy NPs	65
2.3.3.1	Block Copolymer Composition	65
2.3.3.2	Block Copolymer Concentration	66
2.3.3.3	The Nature of the Solvent	66
2.3.3.4	Additives	67
2.3.3.5	Other Factors	68
2.4	Summary	69
	References	69
<b>3</b>	<b>Hairy Nanoparticles via Unimolecular Block Copolymer Nanoreactors</b>	<b>73</b>
	<i>Wenjie Zhang and Xinchang Pang</i>	
3.1	Background	73
3.2	Synthesis and Properties of Block Copolymer Unimolecular Micelles	75
3.2.1	Properties of Unimolecular Block Copolymer Micelles	75
3.2.2	Synthesis and Features of Star-Liked Block Copolymers	77
3.2.2.1	Synthesis of Star-Liked Block Copolymers via Core-First Method	77
3.2.2.2	Synthesis of Star-Liked Block Copolymers via Arm-First Method	83
3.2.3	Synthesis of Bottle Brush-Liked Block Copolymer	84
3.3	Synthesis of Monodispersed Nanoparticles via Block Copolymer Unimolecular Micelles Nanoreactors	88
3.3.1	Star-Like Block Copolymers as Unimolecular Nanoreactors	88

3.3.1.1	Plain Nanoparticles	88
3.3.1.2	Core@Shell Nanoparticles	94
3.3.1.3	Hollow Nanoparticles	97
3.3.1.4	Nanoring	99
3.3.1.5	Colloidal Nanoparticles Assemblies	102
3.3.2	Cylindrical Polymer Brushes as Unimolecular Nanoreactors	104
3.4	Application of Polymer-Capped Nanoparticles	111
3.4.1	Solar Energy Conversion	112
3.4.2	Light-Emitting Diodes	113
3.4.3	Lithium-Ion Batteries	114
3.4.4	Catalysis	115
3.5	Conclusions and Perspectives	117
3.5.1	Conclusion	117
3.5.2	Perspectives	117
	References	119
<b>4</b>	<b>Environmentally Responsive Hairy Inorganic Particles</b>	<b>123</b>
	<i>Caleb A. Bohannon, Ning Wang, and Bin Zhao</i>	
4.1	Introduction	123
4.2	Environmentally Responsive Well-defined Binary Mixed Homopolymer Brush-grafted Silica Particles	126
4.2.1	Introduction to Mixed Polymer Brushes	126
4.2.2	Mixed Polymer Brushes Grafted on Particles	129
4.2.3	Synthesis of Well-defined Binary Mixed Homopolymer Brushes on Silica Particles	130
4.2.4	Responsive Properties of Binary Mixed Homopolymer Brush-grafted Silica Particles	134
4.3	Thermoresponsive Polymer Brush-grafted Silica Particles	141
4.3.1	Synthesis and Thermally Induced LCST Transition of Thermoresponsive Polymer Brushes Grafted on Silica Particles	141
4.3.2	Thermally Induced Phase Transfer of Thermoresponsive Hairy Particles Between Two Immiscible Liquid Phases	144
4.3.2.1	Thermally Induced Phase Transfer of Thermoresponsive Hairy Particles Between Water and Immiscible Organic Solvents	144
4.3.2.2	Thermally induced Phase Transfer of Thermoresponsive Hairy Particles Between Water and a Hydrophobic Ionic Liquid	146
4.3.3	Thermoreversible Gelation of Thermoresponsive Diblock Copolymer Brush-grafted Silica Nanoparticles in Water	150
4.3.4	Thermoresponsive Polymer Brush-grafted Nanoparticles for Enhancing Gelation of Thermoresponsive Linear ABC Triblock Copolymers in Water	156
4.4	Summary and Outlook	160
	Acknowledgements	161
	References	161

<b>5</b>	<b>Self-Assembly of Hairy Nanoparticles with Polymeric Grafts</b>	<b>167</b>
	<i>Xiaoxue Shen, Huibin He, and Zhihong Nie</i>	
5.1	Introduction	167
5.2	Self-Assembly of PGNPs into Colloidal Molecules	168
5.2.1	Precisely Defined Assembly of Patchy NPs	168
5.2.1.1	Isotropic NPs	169
5.2.1.2	Anisotropic NPs	171
5.2.2	Polymer-Guided Assembly of NPs	172
5.3	Self-Assembly of PGNPs Into One-Dimensional (1-D) Structures	175
5.3.1	Self-Assembly of PGNPs in Solution Guided by Various Molecular Interactions	176
5.3.1.1	Self-Assembly Driven by Neutralization Reaction	176
5.3.1.2	Self-Assembly Driven by Hydrophobic Interaction	178
5.3.1.3	Self-Assembly Driven by Dipolar Interaction	180
5.3.2	Templated Self-Assembly of PGNPs into 1-D Structures	182
5.3.2.1	Hard Template-Assisted Assembly of PGNPs	182
5.3.2.2	Self-Assembly of PGNPs Assisted by Soft Templates	184
5.3.3	The Self-Assembly of 1-D Structures in Polymer Films	187
5.4	Self-Assembly of PGNPs into 2-D Structures	190
5.4.1	Templated Self-Assembly of PGNPs into 2-D Structures	190
5.4.1.1	Self-Assembly Using BCPs as Templates	190
5.4.1.2	Hard Template-Assisted Self-Assembly	193
5.4.2	Interfacial Assembly	193
5.4.3	2-D Assemblies Within Thin Film	197
5.4.3.1	PGNPs/Homopolymer System	197
5.4.3.2	Self-Assembly of Single-Component Neat PGNPs	199
5.4.3.3	Self-Assembly of Binary PGNPs Blends	201
5.5	Self-Assembly of PGNPs into 3-D Structures	202
5.5.1	Self-Assembly of PGNPs into Clusters	202
5.5.2	Self-Assembly of PGNPs into Vesicles	206
5.5.2.1	Self-Assembly of Hydrophilic Homopolymer-Grafted NPs	206
5.5.2.2	Self-Assembly of Mixed Homopolymer-Grafted NPs (M-PGNPs)	206
5.5.2.3	Self-Assembly of BCP-Grafted NPs (B-PGNPs)	209
5.5.2.4	Co-Assembly of Binary B-PGNPs or B-PGNPs/BCPs	210
5.5.3	Self-Assembly of PGNPs into 3-D Superlattices and Crystals	212
5.5.3.1	Superlattices and Crystals Assembled in Solution	212
5.5.3.2	Binary Superlattice Assembled at Interfaces	214
5.6	Representative Applications of Assembled PGNPs	215
5.6.1	Biological Applications: Imaging, Therapy, and Drug Delivery	215
5.6.1.1	Assemblies of Plasmonic PGNPs	216
5.6.1.2	Assemblies of Magnetic PGNPs	216
5.6.1.3	Assemblies of Plasmonic-Magnetic PGNPs	217
5.6.2	Dielectric Materials	218
5.7	Summary and Outlook	219
	References	220

<b>6</b>	<b>Interfacial Property of Hairy Nanoparticles</b>	<b>227</b>
	<i>Yilan Ye and Zhenzhong Yang</i>	
6.1	Introduction	227
6.2	Hairy NPs as Interfacial Building Blocks	228
6.2.1	Conformation of Grafted Polymers in Good Solvents	228
6.2.2	Patchy and Janus Geometry in Selective Solvents	230
6.2.3	Interfacial Activity as Colloids	233
6.3	Hairy NPs Assembly at Various Interfaces	235
6.3.1	Dispersion in Polymer Nanocomposites	235
6.3.2	Anisotropic Assembly	237
6.3.3	Liquid–Liquid Interfaces	240
6.3.4	Air–Solid Surfaces	243
6.3.5	Air–Liquid Surfaces	244
6.4	Interfacial Entropy	246
6.5	Interfacial Jamming	248
6.5.1	Electrostatic Assembly	248
6.5.2	Host–Guest Molecular Recognition	251
6.6	Single-Chain NPs at Interfaces	251
6.6.1	Efficient Synthesis	251
6.6.1.1	Electrostatic-Mediated Intramolecular Crosslinking Toward Large-Scale Synthesis of SCNPs	252
6.6.1.2	Grafting Single-Chain at NPs	255
6.6.2	Interfacial Applications	256
	References	258
<b>7</b>	<b>Hairy Hollow Nanoparticles</b>	<b>261</b>
	<i>Huiqi Zhang</i>	
7.1	Introduction	261
7.2	Overview of the Progress in the Design and Synthesis of Hairy Hollow NPs	262
7.2.1	Synthetic Strategies for Hairy Hollow Polymer NPs	262
7.2.1.1	Sacrificial Template Method	263
7.2.1.2	Self-Assembly (of Block Copolymers) Method	282
7.2.1.3	Single-Molecule Templating (of Core–Shell Bottlebrush Polymers) Method	288
7.2.2	Synthetic Strategies for Hairy Hollow Inorganic NPs	293
7.2.2.1	Direct Grafting of Polymer Brushes onto Hollow Inorganic NPs	293
7.2.2.2	Sacrificial Template Strategy Combined with Sol–Gel Chemistry and Polymer Brush-Grafting Methods	296
7.2.3	Synthetic Strategies for Hairy Hollow Organic/Inorganic Hybrid NPs	302
7.2.3.1	Direct Deposition of Polymer Layers onto Hollow Inorganic NPs by SI-Polymerizations	302
7.2.3.2	Self-Assembly Method	302
7.2.3.3	Single-Molecule Templating Method	304

7.2.3.4	Sacrificial Template Method Combined with Polymer Brush Nanoreactors	305
7.3	Conclusions and Perspectives	306
	Acknowledgment	308
	References	308
<b>8</b>	<b>Self-Assembly of Binary Mixed Homopolymer Brush-Grafted Silica Nanoparticles</b>	<b>313</b>
	<i>Bin Zhao, Ping Tang, Phoebe L. Stewart, Rong-Ming Ho, Christopher Y. Li, and Lei Zhu</i>	
8.1	Introduction	313
8.2	Computer Simulations of the Self-Assembled Morphology of MBNPs	315
8.3	Self-Assembled Morphologies of Well-Defined Binary Mixed Homopolymer Brushes Grafted on Silica NPs	318
8.3.1	Synthesis of Well-Defined Binary Mixed Homopolymer Brush-Grafted Silica NPs	318
8.3.2	Lateral Microphase Separation of Nearly Symmetric PtBA/PS MBNPs	319
8.3.3	Effect of Chain Length Disparity on the Self-Assembled Morphology of PtBA/PS MBNPs	320
8.3.4	Effect of Overall Grafting Density on Morphology of PtBA/PS MBNPs	324
8.3.5	Effect of Molecular Weight on Morphology of Symmetric MBNPs	327
8.3.6	Effect of Core Particle Size on Morphology of PtBA/PS MBNPs	332
8.3.7	3D Morphologies of PtBA/PS MBNPs by Cryo-TEM and Electron Tomography	335
8.4	Self-Assembled Morphology in Solvents and Homopolymer Matrices	339
8.4.1	Self-Assembly of MBNPs in Good and Selective Solvents	339
8.4.2	Self-Assembly of MBNPs in Homopolymer Matrices with Different Molecular Weights	341
8.5	Conclusions and Future Work	346
	Acknowledgment	346

- 11 Hairy Inorganic Nanoparticles for Oil Lubrication 401**  
*Michael T. Kelly and Bin Zhao*
- 11.1 Introduction 401
- 11.1.1 Oil Lubrication 401
- 11.1.2 Nanoparticles as Oil Lubricant Additives for Friction and Wear Reduction 402
- 11.1.3 Polymer Brush-Grafted Nanoparticles: Definition and Synthesis 404
- 11.2 Oil-Soluble Poly(lauryl methacrylate) Brush-Grafted Metal Oxide NPs as Lubricant Additives 406
- 11.2.1 Synthesis, Dispersibility, and Stability in PAO of Poly(lauryl methacrylate) Brush-Grafted Silica and Titania NPs 406
- 11.2.2 Lubrication Properties of Poly(lauryl methacrylate) Brush-Grafted Silica and Titania NPs in PAO 410
- 11.3 Effects of Alkyl Pendant Groups on Oil Dispersibility, Stability, and Lubrication Property of Poly(alkyl methacrylate) Brush-Grafted Silica Nanoparticles 413
- 11.3.1 Synthesis of Poly(alkyl methacrylate) Brush-Grafted, 23-nm Silica NPs 413
- 11.3.2 Dispersibility and Stability of 23-nm Silica NPs Grafted with Poly(alkyl methacrylate) Brushes with Various Pendant Groups in PAO-4 414
- 11.3.3 Effect of Alkyl Side Chains of Poly(alkyl methacrylate) Brushes on Lubrication Performance of 23-nm Hairy Silica NPs as Additives for PAO-4 416
- 11.4 Improved Lubrication Performance by Combining Oil-Soluble Hairy Silica Nanoparticles and an Ionic Liquid as Additives for PAO-4 420

11.4.1	Preparation of PAO-4 Lubricants with Various Amounts of PLMA Hairy Silica NPs and [P8888][DEHP] and Stability of Hairy Silica NPs in the Presence of [P8888][DEHP]	421
11.4.2	Lubrication Performances of PAO-4 Lubricants with the Addition of HNP, IL, and HNP + IL at Various Mass Ratios	422
11.4.3	SEM-EDS and XPS Analysis of Wear Scars Formed on Iron Flats from Tribological Tests	424
11.5	Upper Critical Solution Temperature (UCST)-Type Thermoresponsive Poly(alkyl methacrylate)s in PAO-4	426
11.5.1	Synthesis of Poly(alkyl methacrylate)s with Various Alkyl Pendant Groups by RAFT Polymerization and Their Thermoresponsive Properties in PAO-4	428
11.5.2	UCST-Type Thermoresponsive ABA Triblock Copolymers as Gelators for PAO-4	429
11.6	Summary	432
	Acknowledgments	433
