

## Index

### **a**

active AF cycle 168  
 active antifogging 168–169  
 AF butterfly wings  
   chemical composition of 162–163  
   fabrication of 163–164  
   MHPSs 162, 163  
   multiscale hierarchical morphologies of 161–162  
 Ag nanoparticles (Ag NPs) 260  
 ambient contrast ratio (ACR) 94  
 amplitude grating 194  
 angle dependence 136, 199–201  
 angle of incidence (AOI) 7, 40, 81, 122, 200  
 anisotropy diffusion 166, 168, 169  
 anodic aluminum oxide (AAO) template 116–120, 122, 124, 131–133  
 antifogging (AF) surfaces  
   Cassie–Baxter model 153  
   classification of 155  
   definition of 155  
   dynamic wettability 154–155  
   smooth surfaces 152–153  
   superhydrophilic 155–157  
   superhydrophobic 158–161  
   Wenzel model 153  
 anti-glare effect 95  
 anti-oil-fouling properties 224, 227, 230, 234, 235  
 antireflective coatings (ARCs) 93, 104  
 antireflective structures (ARS) 49, 53, 103  
 assembly methods 52  
 atomic force microscope (AFM) technique 27–28, 96, 105, 285

atomic layer deposition (ALD) 47, 50–52, 206  
 Auger electron spectroscopy (AES) 30

### **b**

bilayer inverse heterostructure (BLIHS) 208  
 bioengineering method 5  
 bioinspired AR structures  
   angle-dependent optical performances 124  
   array structure 118–119  
   chemical composition of 121–122  
   effect of structural parameter changes 122–124  
   morphologies of 120–121  
 bioinspired AF surfaces 159, 163–164, 169  
 bioinspired color reflectors (BCRs) 202  
 bioinspired fabrication method 231  
 bioinspired strain sensor  
   applications of 265–269  
   design and fabrication of 258–260  
   sensing performance and working mechanism 261–264  
   structure and morphology characterization 261  
   superhydrophobic property 264–265  
 bioinspired superhydrophobic paper (BSP) 249–250  
   aqueous-based liquids 253–254  
   chemical durability and boiling water resistance 254, 255  
   heat-insulation 255–256  
   mechanical abrasion durability 254–255

- bioinspired superhydrophobic paper (BSP) (*contd.*)
    - self-cleaning and optical transparency performances of 251–253
    - surface morphology and characterization of 250–251
    - surface wettability 251–253
    - underwater writable performance 256–258
  - biomimetic AF monolayer film (BMF)
    - chemical composition of 165–166
    - MHPS 166–168
    - multiscale hierarchical morphologies of 164–165
    - static wetting characteristics of 165
  - biomimetic feature structures 89–90
  - biomimetic monolayer film (BMF) 164
  - biomimetic ultrathin films (BUFs) 278
  - bionics 1–3, 39, 131, 258, 259, 269, 297
  - bio-template method 47–48, 278, 283
  - butterfly-inspired structure color
    - materials 202–208
  - butterfly-inspired UV-AR surfaces
    - characterizations of 75–76
    - fabrication of structural 74
  - butterfly wings 4–6
    - AF surfaces inspired by 161–169
    - characterizations of 85–87
    - directional adhesion for 34, 35
    - light-trapping mechanism of 76–83, 89–91
    - light-trapping performance of 88–89
    - light-trapping surfaces 83–85
    - Morpho* 278–283
    - oil–water separation materials 224–237
    - Parnassius* 71–76
    - structural color surfaces on 188–201
    - superhydrophobic modeling of
      - directional adhesion for 34–36
- C**
- calcination 46, 50, 55, 283
  - Cassie–Baxter model 36, 153–155, 158, 174, 251, 252
  - chemical etching 83, 247
  - cicada wings 6
    - AAO template 117–118
    - antireflective performance 101–103
    - bioinspired AR structures
      - angle-dependent optical performances 124
      - array structure 118–119
      - chemical composition of 121–122
      - effect of structural parameter changes 122–124
      - morphologies of 120–121
    - bioinspired large-area preparation template 116–117
    - fabrication of 106–110
    - Intelligent AR 130
    - microarray 3D model 124–127
    - microstructure and composition of 96–99
    - optical properties of 94–96
    - PMMA positive replica 111–115
    - preparation technology 103–105
    - reflective and transmittance spectra of 100–101
    - scale insensitivity of 127–130
    - SiO<sub>2</sub> negative replica 110–111
    - test materials and reagents 116
    - 3D visible parameterized models of 105–106
  - circular micro-holed array (CMHA) 171–172
  - classic optical theory 80–81, 101–103
  - color formation 187
  - computational fluid dynamics (CFD) 41
  - contact angle hysteresis (CAH) 154–155
  - coupling design strategy 42
- d**
- dark black (DB) wing scale 45
  - demarcation point (DP) 286
  - dermal denticles 12
  - desert *Stenocara* beetle 13–14
  - differential scanning calorimeter (DSC) 134
  - dip coating method 221
  - dipping method 46–47
  - direct laser writing 54
  - double layer and multilayer 82
  - droplet capture–anisotropy
    - diffusion–rapid evaporation 168
  - Dupre–Yong equation 174
  - dynamic wettability 154–155
- e**
- eagle owl 13
  - easy to bioengineering 42

 electric-field-sensitive hydrogel (EFSH) 45  
 electrochemical deposition 247  
 electron beam 25, 26  
 electron beam lithography 49, 83, 207–208  
 electroplating approach 207  
 energy disperse spectroscopy (EDS) 285  
 energy dispersive spectrometer (EDS) 29–30, 86, 98, 99, 226, 285  
 energy spectrometer 25, 29  
 equivalent medium theory (EMT) 127  
 erosion resistance modeling 39, 40  
 etching process 48, 49, 202, 298
- f**  
 fiber-optic spectrometer 280  
 field emission scanning electron microscope (FESEM) 25, 26, 71, 80, 96, 105, 173, 189, 250  
 finite-difference time domain (FDTD) 41, 102, 127, 204, 290  
 fish scales, underwater superoleophobic performance on 237  
 fluid-drag reduction modeling 39  
 fog drop capture 166  
 Fourier-transform infrared spectroscopy (FTIR) 31, 32, 86, 98, 226, 240  
 Fresnel reflection 70, 93, 104, 115, 129  
 frictional adhesion modeling 37  
 Furmidge equation 154
- g**  
 gecko feet 2, 10, 12, 34  
 gecko setae 12, 33, 34  
 geometric trap 68, 69  
 GO-MWNT films 152  
 graphene oxide (GO) 151, 238
- h**  
 heat-insulated superhydrophobic paper 247–258  
 hydrothermal reaction 158
- i**  
 imprinting method 53–54, 83  
 inflection point (IP) 286  
 intelligent AR surfaces, fabrication of cicada-inspired 130–132  
 inverse opal-like structure (IOS) 189, 190  
 ion probe analysis method 31–33  
 isotropic reflection 201
- l**  
 laser direct-write (LDW) 54  
 law of refraction 70  
 layer-by-layer sol-gel-based deposition technique 44–46  
 layer deposition techniques 51, 206–207  
 leaf effect 3  
 lift-off resist (LOR) multilayers 207  
 light emitting diodes (LEDs) 49, 93  
 light single layer, interference 81–82  
 light-trapping AR material 139–141  
 light-trapping effect 38, 129, 139  
 light-trapping mechanism 76–91  
 light trapping structure 38  
   classification of 67–68  
   definition of 67–68  
   geometric trap light principle 68–69  
   UV-ARS mechanism of 71  
 loading/unloading process 33, 263  
 lotus effect 3, 248
- m**  
 mayfly compound eyes 8  
   antifogging behavior of 169–170  
   antifogging mechanism of 170–171  
   microstructure morphologies of 169  
 methyl triethoxy silane (MTEOS) 43  
 MHPS-based BMF  
   active antifogging 168–169  
   dynamic antifogging 166–168  
 microelectromechanical system (MEMS) 12, 43  
 micron manufacturing 43  
 micro-molding technique 44  
 micro-pillared array (MPA) 172–173, 179, 180  
 modified Hummers' method 238  
*Morpho* butterfly wings  
   angle dependence 199–201  
   build-up of vapor responsive platform 278–279  
   composition characterizations of 285–286  
   fabrication of 283  
   incident angles 280, 281

- Morpho* butterfly wings (*contd.*)  
 isotropic reflection 201  
 mechanism of 199, 200  
 morphology characterizations of 283–285  
 NIFSS, reflective spectra of 286, 287  
 operating principle of 279, 280  
 sensitive corner 286–288  
 structural features of 194–198  
 structures and NIFSS 280  
 3D visible parameterized models of 282
- mosquito eyes 8–9, 107
- moth eyes 2, 3, 6–8, 52, 100, 103–105, 107, 128
- multiscale hierarchical pagoda structures (MHPSs) 161–167
