Preface *xiii*

Acknowledgments *xv*

- 1 Introduction of Nature-Inspired Functional Structural Surface** *1*
 - 1.1 Advanced Materials Boosted by Bionics *1*
 - 1.2 Definition and Classification of NIFSS *4*
 - 1.3 Typical Prototypes with Structural Surfaces *4*
 - 1.3.1 Butterfly Wings *4*
 - 1.3.2 Cicada Wings *6*
 - 1.3.3 Moth Eyes *6*
 - 1.3.4 Mayfly Eyes *8*
 - 1.3.5 Mosquito Eyes *8*
 - 1.3.6 Water Striders' Legs *9*
 - 1.3.7 Scorpion Back *10*
 - 1.3.8 Gecko's Feet *10*
 - 1.3.9 Underwater Animals *12*
 - 1.3.10 Eagle Owl *13*
 - 1.3.11 Desert *Stenocara* Beetle *13*
 - References *14*

- 2 Characterization, Analysis, Modeling, and Fabrication of NIFSS** *23*
 - 2.1 Characterization Techniques and Analysis Methods of NIFSS *23*
 - 2.1.1 Preparation of Biological Prototypes *23*
 - 2.1.2 Characterization Techniques of NIFSS *24*
 - 2.1.2.1 Optical Microscopy (OM) Technique *24*
 - 2.1.2.2 Field Emission Scanning Electron Microscope (FESEM) Technique *25*
 - 2.1.2.3 Scanning Electron Microscope (SEM) Technique *25*
 - 2.1.2.4 Transmission Electron Microscope (TEM) Technique *26*
 - 2.1.2.5 X-ray Diffraction (XRD) Technique *26*
 - 2.1.2.6 Atomic Force Microscope (AFM) Technique *27*
 - 2.1.3 Analysis Methods of NIFSS *28*

2.1.3.1	Ultraviolet–Visible Spectroscopy (UV–vis) Method	28
2.1.3.2	Energy Dispersive Spectrometer (EDS) Method	29
2.1.3.3	X-ray Photoelectron Spectroscopy (XPS) Method	30
2.1.3.4	Fourier-Transform Infrared Spectroscopy (FTIR) Method	31
2.1.3.5	Ion Probe Analysis Method	31
2.1.3.6	Nanoindentation	33
2.2	Modeling and Simulation Methods for Bionic Design of NIFSS	33
2.2.1	Modeling Methods	33
2.2.1.1	Modeling of Self-Cleaning for Gecko Setae	33
2.2.1.2	Modeling of Superhydrophobic Surfaces	33
2.2.1.3	Superhydrophobic Modeling for Fish Scales	36
2.2.1.4	Frictional Adhesion Modeling	37
2.2.1.5	Modeling of Light-Trapping Structures	38
2.2.1.6	Fluid-Drag Reduction Modeling	39
2.2.1.7	Erosion Resistance Modeling	39
2.2.2	Simulation Methods	40
2.2.2.1	Translight Method	40
2.2.2.2	FDTD Method	41
2.2.2.3	Computational Fluid Dynamics	41
2.2.2.4	Other Modeling-Related Methods	41
2.3	Design Principles and Fabrication Methods of NIFSS	41
2.3.1	Design Principles of NIFSS	41
2.3.1.1	Selection of Biological Prototypes	41
2.3.1.2	Information Extraction of Feature Structures	42
2.3.1.3	Coupling Design Strategy of Structures and Materials	42
2.3.2	Fabrication Methods of NIFSS	42
2.3.2.1	Nanoimprint Lithography	43
2.3.2.2	Micro-molding Technique	44
2.3.2.3	Layer-by-Layer Sol–Gel-Based Deposition Technique	44
2.3.2.4	Dipping Method	46
2.3.2.5	Bio-template Method	47
2.3.2.6	Etching	48
2.3.2.7	Sonochemical Method	50
2.3.2.8	Atomic Layer Deposition (ALD)	50
2.3.2.9	Assembly Methods	52
2.3.2.10	Physical Evaporation and Deposition	52
2.3.2.11	Imprinting	53
2.3.2.12	Direct Laser Writing	54
2.3.2.13	Calcination	55
2.3.2.14	Selective Dissolution	55
2.3.2.15	Sonication	55
2.3.2.16	Other Fabrication Methods for NIFSS	55
2.3.3	Synthetic Design and Fabrication Strategies of NIFSS	56
	References	58

3	Bioinspired Light-Trapping Structural Surfaces	67
3.1	Definition and Classification of Light-Trapping Structure	67
3.1.1	Geometry in Light Trapping Structure	68
3.1.2	The Principle of Light Trapping in the Film	69
3.2	Ultraviolet Light-Trapping Structures Derived from <i>Parnassius</i> Butterfly Wings	71
3.2.1	UV-ARS Mechanism of Original Butterfly Wings	71
3.2.1.1	Reflective Spectra of Original Butterfly Wings	71
3.2.1.2	3D Visible Parameterized Models of Butterfly Feature Structures	71
3.2.2	Fabrication of Structural Butterfly-Inspired UV-ARS Surfaces	74
3.2.3	Characterizations of Butterfly-Inspired UV-AR Surfaces	74
3.3	Light-Trapping Surfaces for Visible Light Inspired by Butterfly Wings	76
3.3.1	Light-Trapping Mechanism of Original Butterfly Wings	76
3.3.1.1	Light-Trapping Performance of Original Butterfly Wings	77
3.3.1.2	3D Visible Parameterized Models of Butterfly Feature Structures	79
3.3.1.3	Classic Optical Theory for Light-Trapping Performance	80
3.3.1.4	Light-Trapping Mechanism of Butterfly Wings with Hierarchical Structures	82
3.3.2	Fabrication of Structural Butterfly-Inspired Light-Trapping Surfaces	83
3.3.3	Characterizations of Butterfly-Inspired Light-trapping Surfaces	85
3.3.3.1	Morphologies and Elemental Analysis of SiO ₂ Negative Replica	85
3.3.3.2	Morphologies and Elemental Analysis of PDMS Positive Replica	86
3.3.4	Light-Trapping Performance of Butterfly-Inspired Structural Surfaces	88
3.3.5	Light-Trapping Mechanism of Butterfly-Inspired Structural Surfaces	89
3.3.5.1	3D Visible Parameterized Models of Biomimetic Feature Structures	89
3.3.5.2	Light-Trapping Mechanism	90
3.3.5.3	Synergetic Multiple Light-Trapping Mechanism	91
	References	91
4	Transparent Antireflective (AR) Surfaces Inspired by Cicada Wings	93
4.1	High Transparent Antireflective (AR) Surfaces of Original Cicada Wings	94
4.1.1	Optical Properties of Cicada Wing Surfaces	94
4.1.2	Microstructure and Composition of High Reflection Reduction Surface of Cicada Wing	96
4.1.3	Mechanism of High Reflection Reduction on Cicada's Surface	100
4.1.3.1	Reflective and Transmittance Spectra of Original Cicada Wings	100
4.1.3.2	Another Classic Optical Theory for Antireflective Performance	101
4.2	Accurate Fabrication of Cicada-Inspired AR Surfaces	103
4.2.1	Preparation Technology	103
4.2.2	Structure and Composition Analysis	105
4.2.2.1	3D Visible Parameterized Models of Cicada Feature Structures	105

4.2.2.2	Fabrication of Cicada-Inspired AR Surfaces	106
4.2.3	AR Performance of Cicada-Inspired Surfaces	110
4.2.3.1	Morphology and Composition Characterizations of SiO ₂ Negative Replica	110
4.2.3.2	Characterizations of PMMA Positive Replica	111
4.2.3.3	Characterizations of PMMA Positive Replica	112
4.3	Large-Area Preparation of Cicada-Inspired AR Surfaces	115
4.3.1	Preparation Technology	116
4.3.1.1	Test Materials and Reagents	116
4.3.1.2	Bioinspired Large-Area Preparation Template and Its Pretreatment	116
4.3.1.3	Structure Design and Surface Microstructure of AAO Template	117
4.3.1.4	Large-Area Fabrication Technology and Parameter Optimization of Bioinspired AR Array Structure	118
4.3.1.5	Durability Analysis of AAO Template	119
4.3.2	Structure and Composition Analysis	120
4.3.2.1	The Morphologies of Bioinspired AR Structures	120
4.3.2.2	Chemical Composition of the Bioinspired AR Surface	121
4.3.3	AR Performance of Bioinspired AR Surfaces	122
4.3.3.1	The Effect of Structural Parameter Changes on Surface Optical Function	122
4.3.3.2	Angle-Dependent Optical Performances of the Bioinspired AR Surfaces	124
4.3.4	Scale-Insensitive AR Mechanism of Cicada-Inspired Structural Surfaces	124
4.3.4.1	Construction and Electric Field Simulation of Biomimetic AR Microarray 3D Model	124
4.3.4.2	Scale Insensitivity of Biomimetic AR Microarray and Its Antireflection Mechanism	127
4.4	Intelligent AR Cicada-Inspired Structures	130
4.4.1	Fabrication of Cicada-Inspired Intelligent AR Surfaces	130
4.4.2	Characterizations of Cicada-Inspired AR Surfaces	132
4.4.2.1	Morphologies of the Replica	132
4.4.2.2	Composition Characterizations of the Replica	133
4.4.2.3	Reversible AR Performance of Cicada-Inspired Structural Surfaces	134
4.4.3	Modification Treatment and Application Exploration	138
4.4.3.1	Preparation of Bioinspired Self-cleaning AR Materials	138
4.4.3.2	Preparation of Bioinspired Light-Trapping AR Materials	139
4.4.3.3	Preparation of Bioinspired Reversible AR Materials	141
	References	145
5	Bioinspired Antifogging (AF) Surfaces	151
5.1	Wettability-induced AF Theories	152
5.1.1	Smooth Surfaces: Young Model and the Static Contact Angle	152
5.1.2	Wenzel Model	153
5.1.3	Cassie–Baxter Model	153

5.2	Dynamic Wettability: Contact Angle Hysteresis and Sliding Angles	154
5.3	Definition and Classification of AF Surfaces	155
5.3.1	Superhydrophilic AF Surfaces	155
5.3.2	Superhydrophobic AF Surfaces	158
5.4	AF Surfaces Inspired by Butterfly Wings	161
5.4.1	Characterizations and Analysis of Original AF Butterfly Wings	161
5.4.1.1	Multiscale Hierarchical Morphologies of Original Butterfly Wings	161
5.4.1.2	Chemical Compositions of Original Butterfly Wings	162
5.4.1.3	Static Wetting Characteristics of Butterfly Wings with MHPSSs	163
5.4.2	Fabrication of Butterfly-inspired AF Surfaces	163
5.4.3	Characterizations and Analysis of Biomimetic AF Monolayer Film (BMF)	164
5.4.3.1	Multiscale Hierarchical Morphologies of the BMF	164
5.4.3.2	Static Wetting Characteristics of the BMF	165
5.4.3.3	Chemical Compositions of the BMF	165
5.4.4	AF Performance of Butterfly-inspired MHPSSs Surfaces	166
5.4.5	AF Mechanism of Butterfly-inspired MHPSSs Surfaces	166
5.4.5.1	Dynamic Antifogging Behaviors of the MHPSS-based BMF	166
5.4.5.2	Active Antifogging Mechanism of the BMF with MHPSSs	168
5.5	AF Surfaces Inspired by Mayfly Compound Eyes	169
5.5.1	AF Mechanism of Original Compound Eyes	169
5.5.1.1	Microstructure Morphologies of Original Mayfly Compound Eyes	169
5.5.1.2	Antifogging Behavior of Original Mayfly Compound Eyes	169
5.5.1.3	Antifogging Mechanism of Original Mayfly Compound Eyes	170
5.5.2	Fabrication of Superhydrophobic Antifogging Surfaces (SSASs)	171
5.5.2.1	Preparation Process of Circular Micro-holed Array (CMHA)	171
5.5.2.2	Preparation Process of the Sprayed SiO ₂ Coatings on Micro-pillared Array (MPA)	172
5.5.3	Wettability and Composition Analysis of the SSASs	173
5.5.3.1	The Measurements of Surface Wettability for the SSASs	173
5.5.3.2	Water Droplet Bounce Behaviors on the SSASs	175
5.5.3.3	Chemical Compositions of the SSASs	176
5.5.4	AF Performance of the SSASs	177
5.5.4.1	Time-lapse Transmittance of the SSASs	177
5.5.4.2	Micro-dynamic Behavior of the Fog Drops Movement on the SSASs	177
5.5.4.3	Macro-dynamic Process of the Fog Drops Movement on the SSASs	178
5.5.5	AF Mechanism of the SSASs	179
	References	180
6	Structural Color Surfaces Inspired by Butterfly Wings	187
6.1	Definition of Structural Color Surfaces	187
6.2	Structural Color Surfaces on Butterfly Wings	188
6.2.1	<i>Papilio palinurus</i> Butterfly Wings	188
6.2.1.1	Multiscale Hierarchical Structures of Original Butterfly Wings	188
6.2.1.2	MHS-Based Structural Colors of Original Butterfly Wings	190

6.2.1.3	Omnidirectional Reflection Property of Butterfly Wings	191
6.2.1.4	Mechanism Analysis of the ORS Characteristics	193
6.2.2	<i>Morpho</i> Butterfly Wings	194
6.2.2.1	Structural Features of Original <i>Morpho</i> Butterfly Wings	194
6.2.2.2	Mechanism of the Structural Color of Original <i>Morpho</i> Butterfly Wings	199
6.3	Fabrication of the Butterfly-Inspired Structure Color Materials	202
6.3.1	Sol–Gel Process	202
6.3.2	Soft Lithography	206
6.3.3	Layer Deposition Techniques	206
6.3.4	Electron Beam Lithography	207
6.4	Applications of the Structural Color Materials	208
