Preface *xi*

1 Introduction 1

- 1.1 Definition 1
 - 1.2 Dimensions, Fundamental Quantities, and Units 2
 - 1.3 Secondary or Derived Physical Quantities 4
 - 1.4 SI Usage of Units and Symbols 13
 - 1.5 Thermodynamic Systems and Variables 14
 - 1.6 Zeroth Law 16
- Problems for Chapter 1 16

2 Energy and the First Law 21

- 2.1 Introduction 21
 - 2.2 Energy 22
 - 2.3 First Law of Thermodynamics 24
 - 2.4 Application of Solution Procedure to Simple Cases 30
 - 2.5 Practical Application Examples 34
 - 2.5.1 Compressors/Pumps 34
 - 2.5.2 Turbines/Expanders 35
 - 2.5.3 Condensers/Vaporizers/Reboilers 36
 - 2.5.4 Heat Exchanger 36
 - 2.5.5 Sample Cylinder 38
 - 2.6 Differential Form 39
 - 2.7 Inserting Time: Unsteady-State Flow Process 39
 - 2.8 Recap 40
- Problems for Chapter 2 40
- Reference 45

3 PVT Relations and Equations of State 47

- 3.1 Introduction 47
- 3.2 Graphical Representations 47
- 3.3 Critical Region 53
- 3.4 Tabular Representations 54

3.5	Mathematical Representations	56
3.5.1	Perfect and Ideal Gas EOS	57
3.5.2	Reversible Processes Involving Ideal Gases in Closed Systems	58
3.5.2.1	Constant Volume (Isochoric) Process	59
3.5.2.2	Constant Pressure (Isobaric) Process	59
3.5.2.3	Constant Temperature (Isothermal) Process	60
3.5.2.4	Adiabatic Process	60
3.5.2.5	Polytropic Processes	62
3.5.3	Virial Equation of State	65
3.5.3.1	Correlations for the Second and Third Virial Coefficient	69
3.5.4	Other Special Equations	75
3.5.4.1	Tait Equation	75
3.5.4.2	Rackett Equation	75
3.5.4.3	Riedel Equation	75
3.5.4.4	Yen and Woods Equation	76
3.5.4.5	Chueh and Prausnitz Equation	76
3.5.4.6	Generalized Lee–Kesler Correlation	76
3.5.5	Cubic Equations of State	77
3.5.5.1	van der Waals (vdW) Equation of State	77
3.5.5.2	Other Cubic EOS	79
3.5.5.3	Redlich–Kwong (RK) EOS	80
3.5.5.4	Soave–Redlich–Kwong (SRK) Equation of State	82
3.5.5.5	Peng–Robinson (PR) Equation of State	82
3.5.6	Multiparameter Equations of State	83
3.5.6.1	Benedict–Webb–Rubin (BWR) Equation of State	83
3.5.6.2	Boublik–Alder–Chen–Kreglewski	83
3.5.7	Reference Equation of State	85
3.6	Calculation of Volumes from EOS	86
3.7	Vapor Pressure and Enthalpy of Vaporization Correlations	89
3.8	Ideal Gas Enthalpy Changes: Applications	91
3.8.1	Heat of Reaction	91
3.8.1.1	Standard Heat of Reaction	91
3.8.1.2	Standard Heat of Formation	92
3.8.1.3	Standard Heat of Combustion	92
3.8.2	Temperature Dependence of the Heat of Reaction	92
3.8.3	Practical Calculations	94
3.8.3.1	Adiabatic Flame Temperature	95
3.8.3.2	Reaction with Heat Transfer	95
	Problems for Chapter 3	99
	References	109
4	Second Law of Thermodynamics	113
4.1	Introduction	113
4.2	General and Classical Statements of the Second Law	114
4.3	Heat Engines, Refrigerators, and Cycles	116

4.4	Implications of the Second Law	117
4.5	Efficiency	127
4.6	Specific Heat/Heat Capacity	128
4.6.1	Entropy Changes for Ideal Gases	130
4.7	Entropy Balance Equation for Open Systems	133
4.8	Availability and Maximum/Minimum Work	137
	Problems for Chapter 4	139
5	Thermodynamic Relations	145
5.1	Introduction	145
5.2	Mathematics Review	145
5.2.1	Exact Differentials	145
5.2.2	Inexact Differentials and Line Integration	146
5.2.3	Properties of Functions of Several Variables	147
5.3	Fundamental Thermodynamics Equation	148
5.4	Legendre Transforms	149
5.5	Maxwell Relations	151
5.6	Derivation of Thermodynamic Relationships	153
5.7	Open Systems: Chemical Potential	155
5.8	Property Change Calculations	157
5.8.1	Temperature Derivatives	157
5.8.2	Volume Derivatives	158
5.8.3	Pressure Derivatives	159
5.9	Residual Properties	160
5.10	Property Changes Using Residual Functions	163
5.11	Generalized Correlations for Residual Functions	166
5.12	Two-Phase Systems – Clapeyron Equation	169
	Problems for Chapter 5	172
6	Practical Applications for Thermodynamics	179
6.1	Fluid Flow	179
6.1.1	Flow Through Ducts	179
6.1.2	Properties of Sub-cooled Liquids (Compressed Liquid)	184
6.1.3	Pumps, Compressors, and Expanders	186
6.2	Heat Engines and Refrigeration Units	196
6.2.1	Heat and Work	196
6.2.2	Rankine Cycle	198
6.2.3	Modifications of the Rankine Cycle	204
6.2.4	Internal Combustion Engines	211
6.2.4.1	Otto Cycle	211
6.2.4.2	Diesel Engine Cycle	216
6.2.4.3	Gas Turbine Cycle	220
6.2.5	Refrigeration: The Carnot Cycle for a Refrigeration Unit	225
6.2.5.1	Vapor Compression Cycle	226
6.2.5.2	Air Refrigeration Cycle	229

6.2.5.3	Absorption Refrigeration	233
6.2.5.4	Heat Pump	235
6.2.5.5	Liquefaction Process	235
6.2.6	Process Simulators: Using Process Simulation for Fluid Flow Problems	241
	Problems for Chapter 6	249
7	Solution Theory	257
7.1	Introduction	257
7.2	Composition Variables	257
7.3	Chemical Potential	260
7.3.1	More Maxwell Relations	261
7.4	Partial Molar Properties	262
7.5	General Gibbs–Duhem Equation	268
7.6	Differential Thermodynamic Properties in Open Systems in Terms of Measurables	270
7.6.1	Using T and nV	270
7.6.2	Using T, P	271
7.7	Ideal Gas Mixtures	271
7.8	Fugacity and Fugacity Coefficient for Pure Substances	275
7.9	Equations for Calculating Fugacity	277
7.9.1	Fugacity of a Vapor (Point A)	277
7.9.2	Fugacity of a Vapor or Saturated Liquid (Point B)	277
7.9.3	Fugacity of Liquid (Point C)	278
7.9.4	Fugacity of Solid at the Melting Point (Point D)	279
7.9.5	Fugacity of a Solid (Point E)	279
7.10	Application of Fugacity Equation to Gases and Liquids	280
7.11	Fugacity and Fugacity Coefficient in a Solution	284
7.12	Calculation of the Fugacity and Fugacity Coefficient in Solution	287
7.12.1	Using Cubic EOS	291
7.12.1.1	Mixing Rules	292
7.13	Ideal Solutions	298
7.14	Excess Properties. Activity Coefficients	301
7.15	Activity Coefficients with Different Standard States	303
7.16	Effect of Pressure on the Fugacity in Solution and Activity Coefficients Using the Lewis–Randall Rule	305
7.17	Property Change on Mixing	307
7.18	Excess Gibbs Energy Models	310
	Problems for Chapter 7	318
	References	323
8	Phase Equilibrium	325
8.1	Introduction	325
8.2	Equilibrium	325
8.3	Gibbs Phase Rule	329

8.4	Pure Components and Phase Equilibria	330
8.5	Different Phase Diagrams for Binary Mixtures at Vapor–Liquid Equilibrium (VLE)	332
8.6	Vapor/Liquid Equilibrium Relationship	336
8.7	Phase Calculations Using the Gamma–Phi Formulation	338
8.7.1	Bubble Pressure	339
8.7.2	Bubble Temperature	340
8.7.3	Dew Pressure	341
8.7.4	Dew Temperature	342
8.7.5	Flash	342
8.8	Phase Calculations Using the Phi–Phi Formulation	349
8.9	Modern Approach to Phase Equilibrium Calculations	358
8.9.1	Equal Area Rule for Binary Mixtures	359
8.9.2	A General Approach for Multicomponent and Multiphase Systems	365
8.10	Binary Liquid–Liquid Equilibrium (LLE)	374
8.11	Binary Vapor–Liquid–Liquid Equilibrium (VLLE)	381
8.12	Binary Vapor–Solid Equilibrium (VSE)	387
8.13	Binary Liquid–Solid Equilibrium (LSE)	391
	Problems for Chapter 8	397
	References	403
9	Chemical Reaction Equilibria	405
9.1	Introduction	405
9.2	Nature of Reactions	406
9.3	Chemical Reaction Stoichiometry	406
9.4	Extent of Reaction	407
9.5	Phase Rule for Reacting Systems	408
9.6	Principles of Reaction Equilibria	410
9.7	Understanding the Reaction Equilibria	413
9.8	Equilibrium Constant	415
9.9	Temperature Dependence of the Equilibrium Constant	417
9.10	Standard States	420
9.11	Applications to Different Types of Reactions	420
9.11.1	Reactions in Single-Phase Systems	421
9.11.1.1	Gas-Phase Reactions	421
9.11.1.2	Liquid-Phase Reactions	422
9.11.1.3	Solid Reactions	424
9.11.2	Heterogeneous Reactions (Different Phase Systems)	425
9.12	Multi-reactions	429
9.13	Nonstoichiometric Solution	431
9.14	Equal Area Rule for Reactive Thermodynamic Equilibrium Calculations	434
	Problems for Chapter 9	440
	References	447

A	Appendices	449
A.1	Instructions to Add an Add-In Your Computer	449
A.2	Excel® LK CALC Add-In	449
A.3	Excel® STEAM CALC Add-In	451
A.4	Heat Capacity Equations for an Ideal Gas	453
A.5	Antoine Equation Constants	454
A.6	Heat Capacity Equations for liquids	454
A.7	Iterative Procedures for the Calculation of Vapor Liquid Equilibrium	454
A.7.1	Bubble Point Calculations	454
A.7.1.1	Bubble Pressure Calculation	454
A.7.1.2	Bubble Temperature Calculation	455
A.7.2	Dew Point Calculations	456
A.7.2.1	Dew Pressure Calculation	456
A.7.2.2	Dew Temperature Calculation	457
A.7.3	Flash Calculation	458
