Contents

Preface *xvi*
List of Frequently Used Symbols and Abbreviations *xxi*
SI Units, Physical Constants, and Conversion Factors *xxvii*
Summary of Notation *xxxi*

1 Introduction *1*
1.1 Constituents of Matter *1*
1.2 Matter and Energy: Interaction and Change *3*
1.3 Mass and Charge *4*
1.4 Macroscopic and Microscopic Approaches *6*
1.5 Gases, Liquids, and Solids *7*
1.6 What to Expect? *11*
1.7 Units and Notation *12*
References *13*
Further Reading *14*

2 Classical Mechanics *15*
2.1 Frames, Particles, and Coordinates *15*
2.2 From Newton to Hamilton *17*
2.3 Hamilton's Principle and Lagrange's Equations *19*
2.4 Conservation Laws *21*
2.5 Hamilton's Equations *24*
2.6 Hamilton's Principle for Continuous Systems *26*
2.7 The Virial Theorem *27*
2.8 Final Remarks *28*
References *28*
Further Reading *29*

3 Quantum Mechanics *30*
3.1 Quantum Concepts *30*
3.1.1 Fundamental Quantum Kinematics *30*
3.1.2 Operators and their Representation *33*
3.1.3 Fundamental Quantum Kinetics *35*
3.2 Interpretation and Some Exact Solutions *37*

3.2.1 The Particle in a Box *39*
3.2.2 The Harmonic Oscillator *40*
3.2.3 The Rigid Rotator *41*
3.2.4 Many Particles *42*
3.3 Approximate Quantum Mechanics Solutions *43*
3.3.1 The Born–Oppenheimer Approximation *43*
3.3.2 The Variation Principle *44*
3.3.3 The Hartree–Fock Method *47*
3.3.4 Perturbation Theory *51*
3.3.5 The Density Operator *53*
3.4 Final Remarks *55*
References *55*
Further Reading *56*

4 Intermolecular Interactions *57*
4.1 The Semi-classical Approach *57*
4.1.1 Electrostatic Interaction *59*
4.1.2 Induction Interaction *62*
4.1.3 Dispersion Interaction *63*
4.1.4 The Total Interaction *64*
4.2 The Quantum Approach *66*
4.3 Model Interactions *69*
4.4 Refinements *72*
4.4.1 Hydrogen Bonding *72*
4.4.2 Three-Body Interactions *74*
4.4.3 Accurate Empirical Potentials *74*
4.5 Final Remarks *75*
References *76*
Further Reading *77*

5 Continuum Mechanics *78*
5.1 The Nature of the Continuum *78*
5.2 Kinematics *79*
5.2.1 Material and Spatial Coordinates *79*
5.2.2 General Deformations *80*
5.2.3 The Small Displacement Gradient Approximation *81*
5.3 Balance Equations *83*
5.4 Kinetics *85*
5.4.1 The Principle of Virtual Power *86*
5.4.2 Linear Momentum *86*
5.4.3 Angular Momentum *88*
5.4.4 Cauchy's Equations of Motion *88*
5.5 The Stress Tensor *89*
5.6 Mechanical Energy *90*
5.7 Final Remarks *91*
References *92*
Further Reading *92*

6 Macroscopic Thermodynamics *93*
6.1 Classical Thermodynamics *93*
6.1.1 The Four Laws *93*
6.1.2 Quasi-Conservative and Dissipative Forces *99*
6.1.3 Equations of State *100*
6.1.4 Mechanical and Thermal Equilibrium *101*
6.1.5 Auxiliary Functions *101*
6.1.6 Some Derivatives and their Relationships *103*
6.1.7 Chemical Content *103*
6.1.8 Chemical Equilibrium *106*
6.2 The Local State and Internal Variables *110*
6.2.1 The Behavior of Internal Variables *111*
6.2.2 The Local State *113*
6.3 Field Formulation *115*
6.3.1 The First Law *115*
6.3.2 The Second Law *116*
6.4 The Linear Approximation in Non-equilibrium Thermodynamics *118*
6.5 Final Remarks *122*
References *122*
Further Reading *123*

7 Microscopic Thermodynamics *125*
7.1 Basics of Statistical Thermodynamics *125*
7.1.1 Preliminaries *125*
7.1.2 Entropy and Partition Functions *128*
7.1.3 Fluctuations *132*
7.2 Noninteracting Particles *134*
7.2.1 Single Particle *134*
7.2.2 Many Particles *134*
7.2.3 Pressure and Energy *135*
7.3 The Semi-classical Approximation *136*
7.4 Interacting Particles *141*
7.5 Internal Contributions *142*
7.5.1 Vibrations *142*
7.5.2 Rotations *145*
7.5.3 Electronic Transitions *147*
7.6 Some General Aspects *148*
7.6.1 Mode or Average? *148*
7.6.2 Fluctuations and Other Ensembles *149*
7.6.3 Equipartition of Energy *150*
7.6.4 The Gibbs–Bogoliubov Inequality *151*
References *152*
Further Reading *154*

8 Gases *155*
8.1 Basic Kinetic Theory of Gases *155*

8.2 The Virial Expansion *159*
8.2.1 Some Further Remarks *162*
8.3 Equations of State *164*
8.4 The Principle of Corresponding States *168*
8.4.1 The Extended Principle *171*
8.5 Transition State Theory *174*
8.5.1 Chemical Kinetics Basics *174*
8.5.2 The Equilibrium Constant *175*
8.5.3 Potential Energy Surfaces *176*
8.5.4 The Activated Complex *177*
8.5.5 The Link to Experiment *179*
8.6 Dielectric Behavior *180*
8.6.1 Basic Aspects *180*
8.6.2 The Debye–Langevin Equation *182*
8.6.3 Frequency Dependence *185*
8.6.4 Estimating μ and α *190*
References *193*
Further Reading *196*

9 Liquids *197*
9.1 Approaches to Liquids *197*
9.2 Distribution Functions, Structure, and Energetics *198*
9.2.1 Structure *200*
9.2.2 Energetics *203*
9.3 The Integral Equation Approach *206*
9.3.1 The Ornstein–Zernike Equation *206*
9.3.2 The Yvon–Born–Green Equation *209*
9.3.3 Other Integral Equations *210*
9.3.4 The Potential of Mean Force *212*
9.4 Comparison: Hard-Sphere and Lennard-Jones Results *214*
9.5 Scaled-Particle Theory *217*
9.6 Structural Models *218*
9.6.1 Cell Models *220*
9.6.2 Hole Models *226*
9.6.3 Some Other Implementations of Hole Theory *231*
9.7 The Generalized van der Waals Model *237*
9.8 Phonon Theory of Liquids *240*
9.9 The Quantum Cluster Equilibrium Model *244*
9.10 Some Continuum Aspects *245*
9.11 Dielectric Behavior *249*
References *255*
Further Reading *259*

10 Solids *260*
10.1 Inorganics and Metals *260*
10.2 Polymers *263*

10.3 Lattice Concepts *265*
10.4 Crystalline Structures *267*
10.5 Bonding: The Quantum-mechanical Approach *270*
10.5.1 The Nearly Free Electron Approximation *270*
10.5.2 The Tight Binding Approximation *275*
10.5.3 Density Functional Theory *278*
10.6 Bonding: The Empirical Approach *282*
10.6.1 Atoms, Ions, and Electronegativity *282*
10.6.2 Covalent and Molecular Crystals *286*
10.6.3 Ionic Crystals: The Classical Approach *287*
10.6.4 Ionic Crystals: Electronegativity Approaches *290*
10.6.5 Metallic Crystals *294*
10.7 Lattice Dynamics *296*
10.8 Two Simple Models *299*
10.9 Properties *300*
10.9.1 Heat Capacity *300*
10.9.2 Thermal Expansivity *302*
10.9.3 Bulk Modulus *303*
10.10 Defects *304*
10.10.1 Zero-dimensional Defects *305*
10.10.2 One-dimensional Defects *308*
10.10.3 Other Defects *310*
10.11 Thermo-elasticity *312*
10.11.1 Elastic Behavior *312*
10.11.2 Stress States and the Associated Elastic Constants *313*
10.11.3 Elastic Energy *314*
10.11.4 A Matter of Notation *315*
10.11.5 Anisotropic Materials *316*
10.11.6 The Effect of Temperature *319*
10.12 Final Remarks *320*
References *320*
Further Reading *325*

11 Interfaces *326*
11.1 Thermodynamics of Interfaces *326*
11.2 One-Component Surfaces: Semiempirical Considerations *331*
11.3 One-Component Surfaces: Theoretical Considerations *336*
11.3.1 Density Functional Theory *336*
11.3.2 Capillary Wave Theory *341*
11.4 Solid Surface Structure *343*
11.4.1 Surface Roughening *345*
11.5 Adsorption at Interfaces *349*
11.5.1 Solutions *349*
11.5.2 Thermodynamics of Adsorption *355*
11.5.3 Statistics of Adsorption *357*
11.5.4 Adsorption Isotherms *360*

11.6 Final Remarks *366*
References *366*
Further Reading *370*

12 Phase Transitions: General Aspects *371*
12.1 Some General Considerations *371*
12.2 The Clapeyron and Clapeyron–Clausius Equation *375*
12.3 The Mosselman Solution for the Clapeyron Equation *376*
12.4 The Ehrenfest–Prigogine–Defay Equations *378*
12.5 Landau and Landau-like Theory *380*
References *383*
Further Reading *384*

13 Discontinuous Phase Transitions: Liquids ↔ Gases *385*
13.1 Thermodynamics of Evaporation *385*
13.1.1 Evaporation in the Presence of an Inert Gas *387*
13.2 Kinetics of Evaporation *388*
13.2.1 Classical Kinetic Theory *388*
13.2.2 Secondary Effects *393*
13.2.3 Other Approaches *394*
13.3 The Reverse Transition: Condensation *395*
13.3.1 Drops and Bubbles *395*
13.3.2 Classical Nucleation Theory *397*
13.3.3 Nucleation Kinetics *399*
13.3.4 Modifications *401*
13.3.5 Molecular Aspects *404*
References *408*
Further Reading *410*

14 Discontinuous Phase Transitions: Solids ↔ Liquids *411*
14.1 Melting or Fusion *411*
14.2 Mechanical or Bulk Melting *414*
14.2.1 Vibrational Instability *414*
14.2.2 Lattice Instability *418*
14.2.3 Vacancies *418*
14.2.4 Interstitials *419*
14.2.5 Dislocations *422*
14.2.6 Interstitialcies *424*
14.2.7 Simulations *427*
14.3 Thermodynamic or Surface-Mediated Melting *428*
14.3.1 Melting of Nanoparticles *428*
14.3.2 Vacancies Revisited *430*
14.3.3 Dislocations Revisited *432*
14.4 Polymer Melting *434*
14.5 The Influence of Pressure *436*
14.6 Other Aspects *440*

14.7 Melting in Perspective *442*
14.8 The Reverse Transition: Freezing or Solidification *444*
14.8.1 Nucleation and Growth *444*
14.8.2 Some Further Remarks *446*
14.8.3 Polymers and Metals *448*
14.8.4 Water *451*
References *452*
Further Reading *457*

15 Continuous Phase Transitions: Liquids ↔ Gases *458*
15.1 Limiting Behavior *458*
15.2 Mean-Field Theory: Landau Theory *461*
15.2.1 Landau-Like Theory: Fluid Transitions *463*
15.3 Scaling *465*
15.3.1 Homogeneous Functions *465*
15.3.2 Scaling Potentials *466*
15.3.3 Scaling Lattices *467*
15.4 Renormalization *469*
15.5 Final Remarks *475*
References *476*
Further Reading *476*

16 The Liquid Crystal Transformation *478*
16.1 Nature and Types *478*
16.2 The Nematic–Isotropic Transformation *480*
16.2.1 The Orientation as Internal Variable *480*
16.2.2 The Discontinuous Transformation *481*
16.3 Alternative Approaches *482*
16.3.1 Maier–Saupe Theory *483*
16.3.2 The Coil–Helix Transformation *485*
16.3.3 Onsager Theory *486*
16.4 Some Extensions *489*
16.5 Elastic Energy and Defects *491*
16.6 The Fréedericksz Transformation *494*
References *496*
Further Reading *497*

17 Dielectric Behavior and the Ferroelectric Transformation *498*
17.1 Preliminaries and Dielectric Materials *498*
17.1.1 General Remarks *498*
17.1.2 Dielectric Materials *500*
17.2 Electronic Polarization *501*
17.3 Vibrational Polarization *503*
17.3.1 Three Models *507*
17.4 Orientational Polarization *510*
17.5 Space–Charge Polarization *511*

17.6 Ferroelectric Materials *512*
17.7 Ferroelectric Behavior *516*
17.7.1 The Thermodynamic Approach *516*
17.7.2 The Microscopic Approach *518*
References *521*
Further Reading *523*

18 The Glass Transition *525*
18.1 What Is a Glass? *525*
18.1.1 Glassy Materials *528*
18.1.2 Property Changes at T_g *529*
18.2 The Thermodynamic Approach *530*
18.3 The Structural Approach *535*
18.3.1 Free Volume Theory *536*
18.3.2 Continuous Transition Theory *539*
18.4 The Lattice Gas Approach *541*
18.5 Phonon Theory for Glasses *543*
18.6 Mode-Coupling Theory *546*
18.7 Final Remarks *549*
References *550*
Further Reading *553*

19 Irreversibility and the Return to Equilibrium *555*
19.1 Some Considerations *555*
19.2 The Boltzmann Approach *557*
19.2.1 Time Invariance *558*
19.2.2 Recurrence *560*
19.3 The Gibbs Approach *561*
19.4 The Formal Approach *563*
19.5 The Physical Approach *567*
19.6 The Information Theory Approach *571*
19.6.1 A Brief Review *571*
19.6.2 High and Low Probability Manifolds *572*
19.7 Closure *578*
References *580*
Further Reading *583*

Appendix A Guide to Mathematics Used *584*
A.1 Symbols and Conventions *584*
A.2 Derivatives, Differentials, and Variations *584*
A.3 Composite, Implicit, Homogeneous, Complex, and Analytic Functions *586*
A.4 Extremes and Lagrange Multipliers *588*
A.5 Legendre Transforms *588*
A.6 Coordinate Axes Rotations *589*
A.7 Change of Variables *590*
A.8 Calculus of Variations *591*

A.9 Matrices and Determinants *592*
A.10 The Eigenvalue Problem *594*
A.11 Matrix Decompositions *597*
A.12 Scalars, Vectors, and Tensors *598*
A.13 Tensor Analysis *601*
A.14 Gamma, Dirac, and Heaviside Functions *603*
A.15 Laplace and Fourier Transforms *604*
A.16 Some Useful Expressions *606*
Further Reading *607*

Appendix B Elements of Special Relativity Theory *608*
B.1 Lorentz Transformations *608*
B.2 Velocities, Contraction, Dilatation, and Proper Quantities *610*
B.3 Relativistic Lagrange and Hamilton Functions *611*
References *612*
Further Reading *612*

Appendix C The Lattice Gas Model *613*
C.1 The Lattice Gas Model *613*
C.2 The Zeroth or Mean-Field Approximation *613*
C.3 The First or Quasi-Chemical Approximation *615*
C.4 Athermal Entropy for Chain-Like Molecules *619*
References *621*
Further Reading *621*

Appendix D Elements of Electrostatics *622*
D.1 Coulomb, Gauss, Poisson, and Laplace *622*
D.2 A Dielectric Sphere in a Dielectric Matrix *624*
D.3 A Dipole in a Spherical Cavity *626*
Further Reading *627*

Appendix E Elements of Probability and Statistics *629*
E.1 Probability *629*
E.2 Single Variable *631*
E.3 Multiple Variables *632*
E.4 The Normal Distribution and the Central-Limit Theorem *633*
References *635*
Further Reading *635*

Appendix F Selected Data *636*
References *650*

Appendix G Answers to Selected Problems *652*

Index *659*
