l

loading mode 1–6, 36

m

maximum flexural stress 82
model configuration 153–154

n

non-destructive method 179
numerical models 98, 139, 149, 152,
155–156

p

polyethylene 67, 72, 174
polypropylene 174–175
polyurethanes 57, 143, 188
primer 39, 57, 70, 143, 170

q

Quads damage initiation criterion 126

r

Reissner model 104, 112, 113, 116

s

single lap joint (SLJ) 56, 66, 169
 final preparation 60
 manufacture 57–60
 surface treatment 56–57
 testing procedure 60–63
steel adherends 83, 93, 105, 117, 172,
179, 181
stress distribution 12–14, 44, 79, 85, 87,
91, 98, 106, 112, 114, 141, 144, 173,
178, 181

stress-strain curve 145, 147, 168, 179
structural adhesive joints 165, 166
structural adhesives 98, 104, 142, 146,
149, 161, 165–168, 183
surface energy 6–12, 65, 69, 70, 73–79,
145, 168, 170, 173, 174, 176, 183
surface treatments 6–12, 49, 56–58, 65,
69–71, 73, 145, 156, 165, 171, 187

t

tensile loads 12, 35, 167
tensile separation laws 124–125
tensile tests 35, 71, 77, 90
thick adherend shear test (TAST) 35
 final specimen preparation 42
 geometrical control 40–41
 metallic mould 36–37
 specimen manufacture 41–42
 surface treatment of adherends
 37–40
 testing procedure 42–44
thixotropic adhesives systems 160
traction separation laws 124–129
two-part acrylics 143

u

ultrasound analysis 162, 173

v

Volkersen analytical model 79, 81, 84,
87–89, 94–96, 98, 99, 112, 175

w

wettability 8, 11, 168, 173, 176, 181
wind turbine blades 172
